## Symbols

The following standard symbols are used in Statistics Canada publications:

- . . figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- - amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

#### **NOTE ON CANSIM**

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-economic Information Management System). In general, CANSIM provides a longer historical series. For further information on CANSIM call (613) 995-7406 or write Chief, Current Economic Analysis Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

## Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- P nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

#### NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Pour plus d'information sur CANSIM, signaler (613) 995-7406 ou écrire au chef, Division des analyses de conjoncture, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A 0T6.

#### Introduction

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of more timely and more detailed statistical information to better serve user needs.

Part I of this report presents a synopsis of current consumer price index movements for each of the three months in the reference quarter, at both the urban Canada and the regional cities' level. This is presented in the form of descriptive analysis supported by tabular and graphic information.

Part II provides a detailed historical summary of monthly consumer price index movements in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Place-to-place comparative retail price information forms Part III of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 to 6 present background information relating to place-to-place retail price comparisons.

#### Introduction

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, plus rapidement et d'une façon plus détaillée, afin de mieux rencontrer les besoins des utilisateurs.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation de chaque mois du trimestre pour le Canada et les agglomérations urbaines. Ces informations sont présentées sous la forme d'analyses descriptives appuyées de tableaux et de graphiques.

La partie II fournit un résumé historique détaillé des mouvements mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagrégé.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie III de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices des différences des prix de détail entre les villes.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contient les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthodologie des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 à 6 fournit des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

#### **JANUARY 1979**

#### Canada

The All-items Consumer Price Index for Canada (1971=100) increased by 0.8% from 181.3 in December 1978 to 182.7 in January 1979. As a result, the 12-month rise between January 1978 and January 1979 stood at 8.9%, up from the 8.4% registered in the previous 12-month period. Higher food prices and household operation charges accounted for most of the CPI rise in this month. Food prices increased by 1.9% between December 1978 and January 1979 while the index for All-items excluding Food rose by 0.5%.

Higher prices for fresh vegetables, up on average 16.1% in early January and for bread, up 13.1%, were largely responsible for the 2.3% increase in the Food at Home index. Other notable contributors included higher prices for selected beef cuts, chicken and butter while prices for fresh fruit showed a marginal decline.

Increased electricity charges in several cities in the provinces of Quebec and Ontario and higher prices for new cars were the major contributing factors to the 0.5% increase in the All-items excluding Food index. Increased shelter and household services charges and higher gasoline prices were also recorded. The impact of these price increases was somewhat dampened by lower prices for selected clothing items. Between January 1978 and January 1979, the index for All-items excluding Food advanced by 6.9%.

Viewed in terms of goods and services, the price level for goods, including food, advanced by 1.1% in this month while that for services increased by 0.3%. As a result, between January 1978 and January 1979, the price level for goods advanced by 10.4% while that for services rose by 6.3%.

On a seasonally-adjusted basis, the All-items Consumer Price Index advanced by 0.7% between December 1978 and January 1979, this comprised a 2.0% increase in the Food index and a 0.3% increase in the All-items excluding Food index.

#### City Highlights

Between December 1978 and January 1979, consumer prices rose in all 15 cities for which CPI's are published. Advances ranged from 0.3% in St. John's to 1.3% in Regina. The major factors contributing to this variation in city retail price movements were the differing rates of price movements for food and housing charges. The impact of the elimination of the temporary retail sales tax reductions in the province of Saskatchewan was largely responsible for consumer prices increasing by over 1.0% in Regina and Saskatoon.

#### **JANVIER 1979**

#### Canada

L'indice d'ensemble des prix à la consommation pour le Canada (1971 = 100) a augmenté de 0.8 % passant de 181.3 en décembre 1978 à 182.7 en janvier 1979. En conséquence, la hausse sur 12 mois, soit de janvier 1978 à janvier 1979, se chiffre à 8.9 %, contre 8.4 % pour la période allant de décembre 1977 à décembre 1978. L'augmentation des prix des aliments et des frais d'entretien du ménage explique largement la montée de l'IPC ce mois-ci. Les prix des aliments ont augmenté de 1.9 % entre décembre 1978 et janvier 1979, alors que l'indice d'ensemble sans les aliments a progressé de 0.5 %.

Le renchérissement des légumes frais, de  $16.1\,\%$  en moyenne au début de janvier, et du pain  $13.1\,\%$  est le principal responsable de la montée de  $2.3\,\%$  de l'indice des aliments consommés à la maison. Parmi les autres facteurs importants, il faut mentionner les prix de certains morceaux de boeuf, du poulet et du beurre ainsi qu'une baisse minime des prix des fruits frais.

La majoration des tarifs d'électricité dans plusieurs villes du Québec et de l'Ontario ainsi que la hausse des prix des voitures neuves sont les principales causes de la poussée de 0.5 % de l'indice d'ensemble sans les aliments. Des augmentations ont également été observées pour les frais de logement et d'entretien du ménage et les prix de l'essence. Les conséquences de ces augmentations ont été quelque peu atténuées par la baisse des prix de certains vêtements. Entre janvier 1978 et janvier 1979, l'indice d'ensemble sans les aliments a progressé de 6.9 %.

Du point de vue des biens et des services, les prix des biens, y compris les aliments, ont gagné 1.1~% au cours de ce mois, tandis que ceux des services progressaient de 0.3~%. Le niveau des prix s'est donc élevé de 10.4~% pour les biens et de 6.3~% pour les services entre janvier 1978 et janvier 1979.

Après désaisonnalisation, l'indice d'ensemble des prix à la consommation a grimpé de  $0.7\,\%$  entre décembre 1978 et janvier 1979; cette montée résulte d'une augmentation de  $2.0\,\%$  de l'indice des aliments et de  $0.3\,\%$  de l'indice d'ensemble sans les aliments.

#### Points saillants des indices des villes

Entre décembre 1978 et janvier 1979, les prix à la consommation ont augmenté dans les 15 villes pour lesquelles on publie un IPC. Les hausses se sont échelonnées entre  $0.3\,\%$  à St. John's et  $1.3\,\%$  à Regina. Les principaux facteurs de cette variation des mouvements des prix de détail entre les villes ont été les différents taux du mouvement des prix des aliments et du mouvement des frais de logement. L'élimination des réductions temporaires des taxes de vente en Saskatchewan a été largement responsable de la poussée de plus de  $1.0\,\%$  des prix à la consommation à Regina et à Saskatoon.

#### **FEBRUARY 1979**

#### Canada

The All-items Consumer Price Index for Canada (1971=100) increased by 0.9% from 182.7 in January to 184.4 in February. As a result, the 12-month rise between February 1978 and February 1979 stood at 9.2%, up from the 8.9% registered in the previous 12-month period. Higher Food prices were again a significant factor in this overall monthly CPI rise, having been responsible for about one half of the increase. Food prices advanced by 2.5% between January and February, up from the 1.9% registered in the previous month, while the index for All-items excluding Food rose by 0.5%, unchanged from the increase observed in the previous month.

Higher prices for beef cuts, up on average 10.8% in early February were largely responsible for the 2.8% increase in the Food at Home index. Other notable contributors to this monthly rise included higher prices for selected fresh fruit and vegetables, dairy products and for most cereal and bakery products. Chicken and sugar prices recorded a slight decline. The 2.8% increase in the Food at Home index in February brought the index to a level 17.5% above its level of February 1978.

Increased shelter charges for both rented and owned accommodation and higher prices for new cars were major contributing factors to the 0.5% increase in the All-items excluding Food index. Other notable factors included higher prices for many clothing items, tobacco products, magazines and, in several cities, for newspapers, electricity and automobile insurance premiums. Higher prices were also recorded for both men's haircuts and women's hairdressing services as well as for prescribed medicines. Between February 1978 and February 1979, the index for All-items excluding Food advanced by 6.8%.

Viewed in terms of goods and services, the price level for goods, including food, advanced by 1.2% in this month while that for services increased by 0.5%. As a result, between February 1978 and February 1979, the price level for goods advanced by 11.2% while that for services rose by 6.0%.

On a seasonally-adjusted basis, the All-items Consumer Price Index advanced by 1.0% between January and February; this comprised a 2.5% increase in the Food index and a 0.6% increase in the All-items excluding Food index.

#### City Highlights

Between January and February, consumer prices rose in all 15 cities for which CPI's are produced. Advances ranged from 0.6% in Charlottetown/Summerside to 1.6% in Edmonton. In seven of the 15 cities, consumer prices rose in excess of 1.0%. The differing rates of price increases for food, ranging from 1.3% in Saskatoon to 3.9% in Edmonton, were the major factor contributing to this variation in city retail price movements.

#### FÉVRIER 1979

#### Canada

L'indice d'ensemble des prix à la consommation pour le Canada (1971 = 100) a augmenté de 0.9 %, passant de 182.7 en janvier à 184.4 en février. En conséquence, la hausse sur 12 mois, soit de février 1978 à février 1979, se chiffre à 9.2 %, contre 8.9 % pour la période allant de janvier 1978 à janvier 1979. Les aliments sont encore une fois les grands responsables, intervenant pour environ la moitié de la progression globale de l'IPC au cours du mois observé. Les prix des aliments ont augmenté de 2.5 % entre janvier et février, en hausse sur le chiffre de 1.9 % enregistré le mois précédent, alors que l'indice d'ensemble sans les aliments a grimpé au même rythme qu'au mois précédent, soit de 0.5 %.

Le renchérissement des morceaux de boeuf, de 10.8 % en moyenne au début de février, est le principal responsable de la montée de 2.8 % de l'indice des aliments consommés à la maison. Parmi les autres facteurs importants, signalons certains fruits et légumes frais, les produits laitiers et la plupart des produits céréaliers et de boulangerie. Les prix du poulet et du sucre ont baissé légèrement. Avec cette hausse de 2.8 % en février, l'indice des aliments consommés à la maison a grimpé de 17.5 % par rapport au niveau atteint en février 1978.

La majoration des frais de logement de location et en propriété et la hausse des prix des voitures neuves sont les principales causes de la poussée de 0.5 % de l'indice d'ensemble sans les aliments. De nombreux articles d'habillement, les tabacs, les revues et, dans plusieurs villes, les journaux, les tarifs d'électricité et les primes d'assurance-automobile ont connu des augmentations non négligeables. Des hausses ont également été observées dans le cas des services de coiffure pour hommes et pour femmes et des médicaments sur ordonnance. Entre février 1978 et février 1979, l'indice d'ensemble sans les aliments a progressé de 6.8 %.

Du point de vue des biens et services, les prix des biens, y compris les aliments, ont monté de  $1.2\,\%$  au cours du mois, tandis que ceux des services ont progressé de  $0.5\,\%$ . Le niveau des prix s'est donc élevé de  $11.2\,\%$  pour les biens et de  $6.0\,\%$  pour les services entre février 1978 et février 1979.

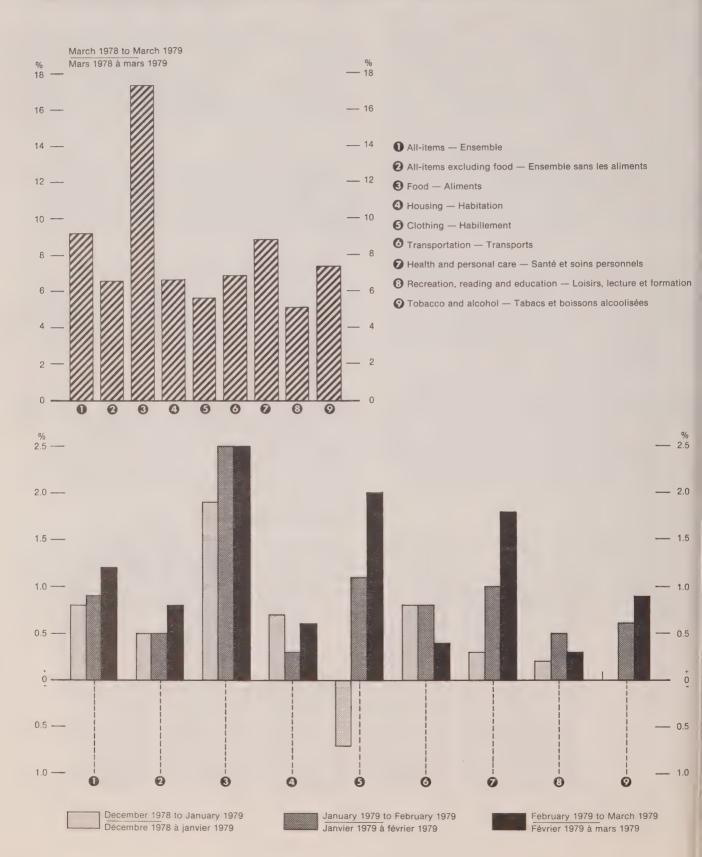

Après désaisonnalisation, l'indice d'ensemble des prix à la consommation a grimpé de 1.0 % entre janvier et février; cette montée résulte d'une augmentation de 2.5 % de l'indice des aliments et de 0.6 % de l'indice d'ensemble sans les aliments.

#### Points saillants des indices des villes

Entre janvier et février, les prix à la consommation ont augmenté dans les 15 villes pour lesquelles on produit un IPC. Les hausses se sont échelonnées entre 0.6 % à Charlottetown/Summerside et 1.6 % à Edmonton. Les prix à la consommation ont grimpé de plus de 1.0 % dans sept des 15 villes. Les différents taux du mouvement des prix des aliments, variant entre 1.3 % à Saskatoon et 3.9 % à Edmonton, expliquent en grande partie cette variation des mouvements des prix de détail entre les villes.

Chart — 3
Percentage Change in the Consumer Price Index and its Major Components

Taux de variation de l'indice des prix à la consommation et de ses principales composantes

#### Canada

The All-items Consumer Price Index for Canada (1971 = 100) increased by 1.2% from a level of 184.4 in February to 186.6 in March. As a result, the 12-month rise between March 1978 and March 1979 stood at 9.2%, unchanged from the increase observed in the previous 12-month period. Higher Food prices were once again a significant factor in the overall monthly CPI rise, having been responsible for about one half of the increase. Higher Housing charges and increased prices for Clothing also had a noticeable impact. Food prices advanced by 2.5% between February and March, unchanged from the increase observed in the previous month, while the index for All-items excluding Food rose by 0.8%, up from the 0.5% registered in the previous month.

Higher prices for beef cuts, up on average 7.5% in early March were largely responsible for the 2.9% increase in the Food at Home index. Other notable contributors to this monthly rise included higher prices for selected fresh fruit and vegetables, other meat products, poultry and for selected dairy and cereal products. Coffee and tea prices recorded a slight decline. The 2.9% increase in the Food at Home index in March brought this index to a level 19.0% above its March 1978 level. The Food away from Home index rose by 1.1% in March resulting in an increase of 11.3% over its level in March 1978.

Higher prices for most clothing and household furnishings items were major contributing factors to the 0.8% increase in the All-items excluding Food index. Other notable factors included increased shelter charges for both rented and owned accommodation, higher dental care charges and increased prices for most tobacco products. As well, increased local transit fares became effective in several cities while in the provinces of Newfoundland and Quebec higher prices for beer consumed at home were registered. Between March 1978 and March 1979, the index for All-items excluding Food advanced by 6.5%, a slight decline from the 6.8% registered in the previous 12-month period.

Viewed in terms of goods and services, the price level for goods, including food, advanced by 1.6% in the month while that for services increased by 0.7%. As a result, between March 1978 and March 1979, the price level for goods advanced by 11.2% while that for services rose by 6.2%

On a seasonally-adjusted basis, the All-items Consumer Price Index advanced by 1.3% between February and March; this comprised a 2.6% increase in the Food index and a 0.9% increase in the All-items excluding Food index.

#### City Highlights

Between February and March, consumer prices rose in all 15 cities for which CPI's are produced. Advances ranged from 0.8% registered in both Winnipeg and Regina to 1.4% observed in Saint John. In 11 of the 15 cities, consumer prices rose by 1.0% or more, with food prices increasing in excess of 2.0% in all cities except Vancouver, where a 1.8% rise was observed.

#### JANUARY, FEBRUARY AND MARCH IN RETROSPECT

The All-items Consumer Price Index for Canada (1971 = 100) increased by 2.9% in the first quarter 1979 rising from 181.3 in December 1978 to 186.6 in March 1979. This latest increase compares with a rise of 2.1% in the corresponding first quarter 1978.

Higher food prices, up 7.1% in the first quarter, accounted for over one half of the overall increase in the All-items index, while increases in housing charges (up 1.5%), clothing prices (up 2.4%) and transportation costs (up 2.0%) have together contributed to a further one third of the total change. A major part of the increase in the Food index resulted

#### **MARS 1979**

#### Canada

L'indice d'ensemble des prix à la consommation pour le Canada (1971 = 100) a augmenté de 1.2 %, passant de 184.4 en février à 186.6 en mars. En conséquence, la hausse de mars 1978 à mars 1979 se chiffre à 9.2 %, égale à celle enregistrée sur 12 mois en février 1979. Les aliments sont encore une fois les grands responsables, intervenant pour environ la moitié de la progression globale de l'IPC au cours du mois considéré. De plus, l'augmentation des frais d'habitation et des prix des vêtements a exercé un effet non négligeable. Les prix des aliments ont progressé de 2.5 % de février à mars, soit au même rythme qu'au cours du mois précédent, alors que l'indice d'ensemble sans les aliments a grimpé de 0.8 %, en hausse sur le chiffre de 0.5 % enregistré le mois précédent.

Le renchérissement des morceaux de boeuf, de 7.5 % en moyenne au début de mars, est le principal responsable de la montée de 2.9 % de l'indice des aliments consommés à la maison. Parmi les autres facteurs importants, signalons certains fruits et légumes frais, les autres viandes, la volaille et certains produits laitiers et céréaliers. Les prix du café et du thé ont baissé légèrement. Avec cette hausse de 2.9 % en mars, l'indice des aliments consommés à la maison a grimpé de 19.0 % par rapport à mars 1978. L'indice des aliments consommés à l'extérieur a progressé de 1.1 % en mars entraînant une augmentation de 11.3 % par rapport à mars 1978.

L'augmentation des prix de la plupart des articles d'habillement et des articles d'ameublement est la principale cause de la poussée de 0.8 % de l'indice d'ensemble sans les aliments. Les frais de logement en location et en propriété, les frais de soins dentaires et les prix de la plupart des produits du tabac ont connu des hausses non négligeables. En outre, les frais des transports en commun ont été majorés dans plusieurs villes, tandis que les prix de la bière consommée à la maison ont augmenté à Terre-Neuve et au Québec. Entre mars 1978 et mars 1979, l'indice d'ensemble sans les aliments a grimpé de 6.5 %, ce qui représente une légère baisse par rapport au chiffre de 6.8 % enregistré sur 12 mois en février 1979.

Du point de vue des biens et des services, les prix des biens, y compris les aliments, ont monté de  $1.6\,\%$  en mars, tandis que ceux des services ont progressé de  $0.7\,\%$ . Le niveau des prix s'est donc élevé de  $11.2\,\%$  pour les biens et de  $6.2\,\%$  pour les services entre mars 1978 et mars 1979.

Après désaisonnalisation, l'indice d'ensemble des prix à la consommation a grimpé de 1.3 % entre février et mars; cette montée résulte d'une augmentation de 2.6 % de l'indice des aliments et de 0.9 % de l'indice d'ensemble sans les aliments.

#### Points saillants des indices des villes

Entre février et mars, les prix à la consommation ont augmenté dans les 15 villes pour lesquelles on produit un IPC. Les hausses se sont échelonnées entre 0.8~% à Winnipeg et Regina et 1.4~% à Saint John. Les prix à la consommation ont grimpé d'au moins 1.0~% dans 11~ des 15~ villes, les aliments augmentant de plus de 2.0~% dans toutes les villes, sauf Vancouver qui a connu une hausse de 1.8~%.

#### JANVIER, FÉVRIER ET MARS EN RÉTROSPECTIVE

L'indice d'ensemble des prix à la consommation pour le Canada (1971 = 100) a progressé de 2.9 % au cours du premier trimestre de 1979, passant de 181.3 en décembre 1978 à 186.6 en mars 1979. Cette dernière hausse est comparable à celle de 2.1 % enregistrée au cours du premier trimestre de 1978.

L'augmentation des prix des aliments, qui était de 7.1 % au cours du premier trimestre, a été responsable pour plus de la moitée de la progression de l'indice d'ensemble, tandis que les hausses des frais de logement (progression de 1.5 %), des prix de l'habillement (progression de 2.9 %) et des coûts de transport (progression de 2.0 %) ont, ensemble, contribué à un tiers du

from higher prices for beef, other meat products, chicken, fresh fruit and vegetables, selected cereal and bakery products, soft drinks and food consumed away from home.

The All-items excluding Food index advanced 1.8% in the first quarter 1979 compared to a rise of 1.9% registered in the corresponding first quarter 1978. Advances in shelter charges, electricity rates, local transit fares, automobile insurance premiums and higher prices for new automobiles and clothing stood as major contributors to the latest quarterly increase in the non-food index. Other influences came from increased selected health care charges and higher prices for cigarettes and beer consumed at home.

In the 12-month period, March 1978 to March 1979, the All-items CPI rose by 9.2% reflecting a 17.4% rise in the Food index and an increase of 6.5% in the All-items excluding Food index. These latest advances correspond with 12-month increases ending March 1978 of 8.8% in the All-items index, 13.9% in the Food index and 7.0% in the All-items excluding Food index.

changement global. Le renchérissement des prix du boeuf, d'autres viandes, du poulet, des fruits et légumes frais, de certains produits céréaliers et de boulangerie, des boissons gazeuses et des aliments consommés à l'extérieur a été responsable pour la majeure partie de la progression de l'indice des aliments.

L'indice d'ensemble sans les aliments a augmenté de 1.8 % au cours du premier trimestre de 1979 comparativement à la hausse de 1.9 % enregistrée au cours du premier trimestre de 1978. La progression des frais de logement, des tarifs d'électricité, des frais de transport local, des primes d'assurance-automobile, des prix des voitures neuves et de l'habillement ont été les principaux facteurs de l'augmentation de l'indice d'ensemble sans les aliments pour le premier trimestre. Les hausses enregistrées pour certains frais relatifs aux soins de santé, pour les cigarettes et pour la bière consommée à la maison ont aussi exercé une influence sur l'indice d'ensemble sans les aliments.

Au cours de la période de 12 mois, couvrant mars 1978 à mars 1979, l'indice d'ensemble a progressé de 9.2 % en raison d'une hausse de 17.4 % de l'indice des aliments et d'une hausse de 6.5 % de l'indice d'ensemble sans les aliments. Ces progressions correspondent à celles enregistrées entre mars 1977 et mars 1978, alors que l'indice d'ensemble avait augmenté de 8.8 %, l'indice des aliments de 13.9 % et l'indice d'ensemble sans les aliments de 7.0 %.

For some elaboration of methodology, see Appendix 1. — Pour de plus amples détails sur la méthodologie, consulter appendice 1.

For an explanation of the non-availability of data previous to October 1978, see Appendix 3, Section B(2). — Une explication de l'absence de données pour la période précédant octobre 1978 es trouve à la section B(2) de l'appendice 3.

Seasonally adjusted data are revised annually using updated seasonal adjustment factors. For more information, refer to Appendix 3. Les données désaisonnalisées sont révisées annuellement afin d'introduire des facteurs de désaisonnalisation plus récents. Pour de plus amples renseignements, voir appendice 3.

As of October 1978 indexes are based on 1974 expenditure weights and are linked to their predecessor at September 1978. For further explanation see "Notes on the Consumer Price Index". Appendix 1.— A partir d'octobre 1978 les indices sont calcules à l'aide des pondérations fondées sur les dépenses de 1974 et sont raccordés aux indices précédents en septembre 1978. Pour de plus amples renseignements voir les "Notes sur l'indice des prix à la consommation" Appendice 1 1974 = 100 Reconstructed series.— Séries reconstruites.

Includes gasoline, motor oil, domestic gas, fuel oil and electricity.— Comprend l'essence, l'huile à moteur, le gaz domestique, le mazout et l'électricité

### TABLEAU 9. Indices des prix à la consommation dans les agglomérations urbaines(1,2)

(unless otherwise indicated + 1971=100 sauf indication contraire)

|   |                              |                                  |                                  |                                  |                         | cation co               |                         | - Mois                  |                         |                         |                         |                         |                         | Annual                              |

The Consumer Price Index for All-items and seven major components by cities have been revised with the release of data for October 1978 to correct for methodological differences in the construction of the Canada and city series. For further details see, The Consumer Price Index, Revision based on 1974 Expenditures Concepts and Procedures, (occasional) Catalogue 62-546. — L'indice d'ensemble des prix à la consommation et ses sept composantes principales par ville, ont été révisés avec l'emission d'octobre 1978 afin de tenir compte des différences méthodologiques qui existaient pour la construction des séries du Canada et des villes. Pour de plus amples informations voir, l'Indice des prix à la consommation, révision fondée sur les dépenses de 1974 concepts et procedées (hors-série) no 62-56 da catalogue.

These indexes measure the percentage change in consumer prices within each city, from the Jase que to each subsequent time period. They do not compare price levels between cities; for inter-city indexes of retail prices differentials, refer to Appendix 5 of this publication, — Ces indices mesurent la variation en pourcentage des prix à la consommation dans chaque ville par rapport à l'année de base. Ils ne comparent pas les niveaux des prix d'une ville à l'autre; pour les indices comparatifs des prix de détail, se reporter à l'appendice 5 de cette publication.

1974 = 100

For explanatory notes and detailed item specifications see Appendix 4. In some cases, blanks appear in this table where the quality and (or) quantity of the prices were insufficient to produce a good average. In other cases, the price volatility of certain items and the methodology for calculating updated average prices do not permit their publication. See Section 4 of Appendix 4 for further explanation. Converted from one quart to one litre for most cities of the province of Ontario. Saint John (N.B.), Halifax, Regina, Saskatoon, Edmonton, Calgary (20 ounces). St. John's (Nfld.), Montréal, Ottawa, Toronto, Thunder Bay, Winnipeg, Vancouver (24 ounces). Québec City (32 ounces).

Pour de plus amples renseignements et détails sur les spécifications des articles consulter l'appendice 4.

Nous avons laissé les espaces en blanc dans ce tableau lorsque la qualité et (ou) la quantité des prix relevés ne nous a pas permis d'établir des moyennes fiables et, dans d'autres cas, lorsque l'instabilité des prix des articles et la méthodologie pour mettre à jour les moyennes de prix ne nous permettaient pas de les publier. Voir la section 4 de l'appendice 4 pour une explication additionnelle.

Le prix d'une pinte converti à un litre dans la plupart des villes de l'Ontario.

Saint John (N.-B.), Halifax, Regina, Saskatoon, Edmonton, Calgary (20 onces), St. John's (T.-N.), Montréal, Ottawa, Toronto, Thunder Bay, Winnipeg, Vancouver (24 onces). Québec (32 onces)

Pour de plus amples renseignements, voir appendice 5.
 Les poids indiqués sont les poids pour 1967 figurant dans L'indice des prix à la consommation au Canada (1961 = 100) Révision fondée sur les dépenses de 1967, hors série (no 62-539 au catalogue de Statistique Canada). Ils ne sont présentés qu'à titre documentaire; les poids utilisés en fait sont le poids des villes combinées ajustés en fonction des variations des prix observées depuis 1967.

Appendices

Appendices

# Appendix 1

### THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to price movements.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the movement of prices in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of grocery items are published separately in Appendix 3, Section C.

### Coverage

Beginning with October 1978, the weights used in the Consumer Price Index are those pertaining to 1974 expenditure patterns. Data used for establishing these patterns were obtained through the 1974 Family Expenditure Surveys. The expenditures are those reported by all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. The 1971 Census of Canada revealed 59 such urban centres.

Separate CPI's are published for 15 of these centres which, together, accounted for approximately 70% of the total 1974 current consumption expenditures reported in the 59 centres. These 15 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 400 commodities are priced in each of these 15 cities while in the remaining 44 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

### **Prices**

The prices used in the calculation of the CPI are retail prices inclusive of all sales, excise and other

# Appendice 1

# L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement du mouvement des prix.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le mouvement des prix dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles d'épicerie sont publiées à part dans l'appendice 3, section C.

# Champ d'observation

À compter d'octobre 1978, les pondérations utilisées pour l'indice des prix à la consommation se rapportent aux schémas des dépenses de 1974. Les données qui ont servi à établir ces schémas proviennent des Enquêtes sur les dépenses des familles de 1974. Les dépenses sont celles qu'ont déclarées tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. Selon le recensement du Canada de 1971, ces centres urbains sont au nombre de 59.

Des IPC distincts sont publiés pour 15 centres qui, ensemble, interviennent pour près de 70 % du total des dépenses courantes de consommation déclarées en 1974 par les 59 centres. Les 15 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 400 produits dans chacune des 15 villes; ce nombre est plus faible dans les 44 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

# Prix

Les prix servant au calcul de l'IPC sont les prix au détail et englobent toutes les taxes de vente, d'accise et autres taxes

taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected in judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

# Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically revised. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods. For the period April 1973 to September 1978, the 1967 family expenditure patterns (and within the food component, the 1969 detailed spending patterns) were used, while for October 1978 forward, the indexes are based on the 1974 expenditure patterns.

### Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont révisées périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes. Entre avril 1973 et septembre 1978, les habitudes des dépenses des familles de 1967 ont servi à établir les pondérations (les pondérations internes de la composante alimentation, sont basées sur les habitudes des dépenses détaillées de 1969) tandis qu'à partir d'octobre 1978, l'indice est calculé d'après les habitudes des dépenses de 1974.

TEXT TABLE I. Comparison of 1967 and 1974 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF I. Comparaison des pondérations des dépenses de 1967 et de 1974 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

<sup>1</sup> Figures may not add up due to rounding.

<sup>1</sup> Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

These weights represent expenditures in 1974 (1974 quantities valued in 1974 prices) and in 1967 (1967 quantities valued in 1967 prices). They cannot be used to reconstruct or reaggregate indexes on a 1971=100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the address shown below.

The indexes based on 1974 weights were linked or connected in September 1978 to the appropriate indexes based on 1967 weights which had been in use since May 1973. This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level of an aggregate index to fall slightly outside the range of its component indexes.

### Time Base

The Consumer Price Index for Canada and each index city is expressed in terms of 1971=100, except for Charlottetown - Summerside and for certain items, as noted, where the pricing survey was introduced in more recent years.

# **Current Annual Rate of Change**

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 3 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level and raising it to an annual rate (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", Retail Prices and Living Costs — Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

### Reconstructed Indexes

With the release of the October 1978 Consumer Price Index, certain series were reconstructed historically to reflect more closely the Standard Commodity Classification system and the Family Expenditure categories of Statistics Canada. For further details see The Consumer Price Index Revision Based on 1974 Expenditures, Concepts and Procedures (Occasional) Catalogue 62-546.

# **Revised City Indexes**

With the release of the October 1978 Consumer Price Index, certain city indexes were revised historically to correct for methodological differences which Ces pondérations représentent les dépenses en 1974 (quantités et prix de 1974) et en 1967 (quantités et prix de 1967). Elles ne peuvent servir à reconstituer ni à composer des indices sur la base de 1971=100. La méthode à suivre pour une telle reconstitution peut être obtenue sur demande auprès de la section dont l'adresse est donnée plus loin.

Les indices fondés sur les pondérations de 1974 ont été enchaînés ou raccordés en septembre 1978 aux indices correspondants fondés sur les pondérations de 1967, en usage depuis mai 1973. Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, l'indice composé pourrait ainsi dépasser légèrement l'étendue des indices de ces composantes.

### Période de base

L'indice des prix à la consommation du Canada et de chaque ville est exprimé sur la base de 1971=100, sauf pour Charlottetown-Summerside et pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduit qu'au cours des années plus récentes.

### Taux de variation annuel courant

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 3 consiste à prendre un taux de croissance composé sur le niveau désaisonnalisé des trois derniers mois et à le porter à un taux annuel (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", *Prix de détail et coût de la vie* — Bulletin de service (nº 62 - 005 au catalogue) vol. 4, nº 4, avril 1975.

### Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation d'octobre 1978, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent plus fidèlement le système de la Classification type des produits et les catégories des Dépenses des Familles établis par Statistique Canada. Pour de plus amples informations voir L'Indice des prix à la consommation, Révision fondée sur les dépenses de 1974, Concepts et Procédés (hors-série), nº 62-546 au catalogue.

### Revision des indices des villes

Avec l'émission de l'Indice des prix à la consommation d'octobre 1978, certains indices historiques des villes ont été reconstruits pour tenir compte des différences previously existed in the construction of these indexes at the Canada and city levels. For further details see *The Consumer Price Index Revision Based on 1974 Expenditures, Concepts and Procedures* (Occasional) Catalogue 62-546.

# Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in *The Consumer Price Index Revision Based on 1974 Expenditures, Concepts and Procedures* (Occasional), Catalogue 62-546. Information regarding the Family Expenditure Survey is contained in the *Urban Family Food Expenditure Survey, 1974*, Catalogue 62-542, and *Urban Family Expenditure Survey, 1974*, Catalogue 62-544.

méthodologiques qui existaient au niveau de la construction de ces indices entre le Canada et les villes. Pour de plus amples informations voir *L'Indice des prix*, révision fondée sur les dépenses de 1974, Concepts et Procédés (hors-série), nº 62-546 au catalogue.

# Renseignements supplémentaires et publications connexes

L'Indice des prix à la consommation – Révision fondée sur les dépenses de 1974, Concepts et Procédés (hors-série), nº 62-546 au catalogue, décrit en détail les méthodes et concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se trouvent dans Dépenses alimentaires des familles urbaines, 1974, nº 62-542 au catalogue, et Dépenses des familles urbaines, 1974, nº 62-544 au catalogue.

# Appendix 2

# THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1975, compared with their average level in 1971, consumer prices as measured by the CPI were 32.4% higher, so that an equivalent basket of goods and services which could be purchased for \$100 in 1971 would cost the consumer \$132.40 in January 1975. Each consumer dollar in January 1975, therefore, buys less than in 1971 and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1975 the purchasing power of the 1971 consumer dollar declined to approximately 76 cents (\$1.00 x 100.00/132.4 = \$0.76).

Users of the tabulation which shows the purchasing power of the 1971 consumer dollar at different points in time (Table 6) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the CPI relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the CPI, it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

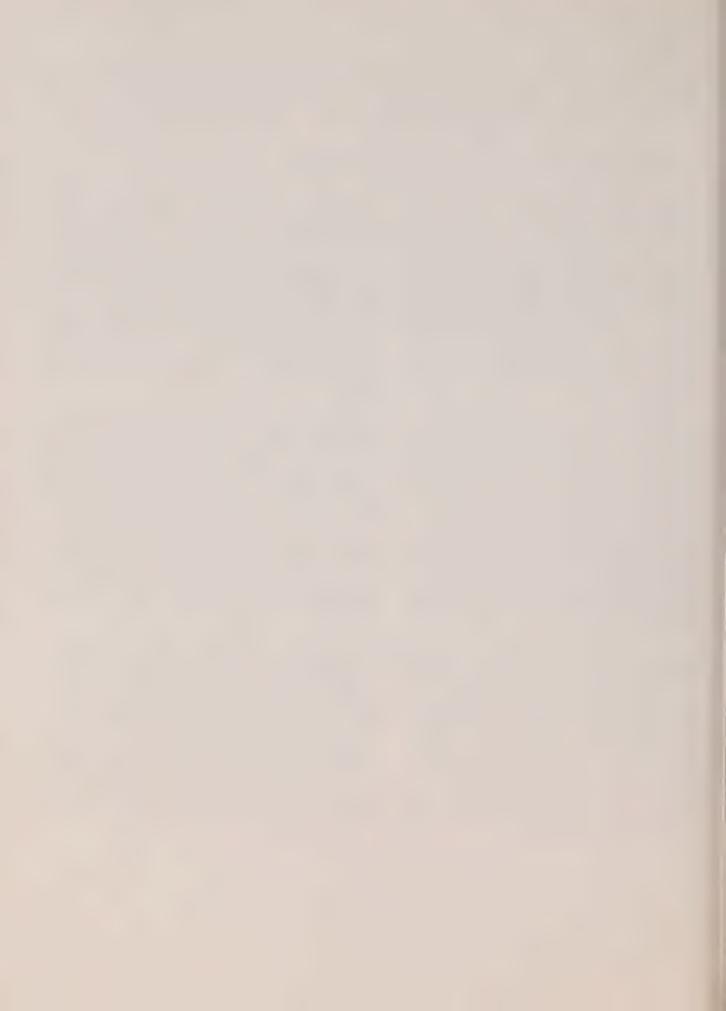

# Appendice 2

# LE POUVOIR D'ACHAT DU DOLLAR DE CON-SOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1975, par rapport au niveau de 1971, les prix à la consommation mesurés par l'IPC avaient progressé de 32.4 %, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1971 aurait coûté \$132.40 en janvier 1975 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1975 achète moins qu'en 1971 et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1975, le pouvoir d'achat du dollar de consommation de 1971 était tombé approximativement à 76 cents (\$1.00 x 100.00/132.4 = \$0.76).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1971 à différentes périodes (tableau 6) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'IPC pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence different sensiblement. Il faut également noter que, tout comme l'IPC il n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

# Appendix 3

# SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences, social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then returns to its original level. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement in one direction over a long period. It reflects continuing rather than changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the subject. Rather than reiterating those texts, an outline of the methodology employed by

### <sup>1</sup> For example, Julius Shiskin and Harry Eisenpress, "Seasonal Adjustments by Electronic Computer Methods", Technical Paper 12, National Bureau of Economic Research, New York, 1958.

# Appendice 3

# LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, puis revient à son niveau initial. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable orienté dans une même direction sur une longue période. Elle reflète la continuité de l'économie plutôt que l'évolution des facteurs économiques.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la question<sup>1</sup>. Au lieu d'en reprendre ici le contenu, nous présentons cidessous les grandes lignes de la méthode utilisée à Statistique

<sup>&</sup>lt;sup>1</sup> Par exemple, l'étude technique n° 12 de Julius Shiskin et de Harry Eisenpress "Seasonal Adjustments by Electronic Computer Methods", National Bureau of Economic Research, New York, 1958.

Statistics Canada – U.S. Bureau of Census X-11 Seasonal Adjustment Program (Variant II) is provided below, followed by a description of its application to the CPI.

### Section A

## 1. Outline Explanation of the X-11 Seasonal Adjustment Program

The X-11 Seasonal Adjustment Program is based on a ratio-to-moving-average methodology.

The first step in the ratio-to-moving-average method is to compute a centered 12-term moving average (a 2-term average of a 12-term moving average). This average eliminates a stable seasonal pattern and irregular fluctuations and reproduces exactly a linear trend. The raw data are then divided by this moving average; since both contain the trend-cycle component, division leaves, essentially, only the seasonal and irregular components. Estimates of the seasonal adjustment factors are then obtained by averaging the seasonal-irregular ratios for successive Januaries, Februaries, etc., so that the irregular factor is largely cancelled out by the averaging procedures. Once the seasonal variations are thus roughly identified, they are eliminated from the original observations by dividing these observations by the seasonal adjustment factors, resulting in a series that contains the trend, cycle and irregular factors, but not the seasonal factors.

The X-11 program performs several iterations of this ratio-to-moving-average procedure. Basically, three rounds of calculations are performed by the program. An outline of the first round follows:

The original series are smoothed using a centered 12term moving average to provide a preliminary estimate of the trend-cycle curve. Then, preliminary seasonalirregular ratios, seasonal factors and an irregular component are calculated. Based on the variability in the irregular component, weights are developed for each monthly value to estimate its degree of extremeness. Values outside specified upper limits receive a weight of 0.0 (totally extreme), values inside specified lower limits receive a weight of 1.0 (totally non-extreme) and values between the limits receive weights between 0.0 and 1.0 depending on their degree of extremeness. For values receiving less than full weight, the corresponding seasonal-irregular ratios are replaced with modified ratios and a second set of seasonal factors is computed. Using these factors, a first estimate of the seasonally adjusted series is Canada, c'est-à-dire, la variante X-11 de la méthode II du U.S. Bureau of Census que suivra une description de son application à l'IPC.

### Section A

### Description sommaire du programme de désaisonnalisation X-11

Le programme X-11 fait appel à la méthode du rapport à la moyenne mobile.

La première étape de cette méthode consiste à calculer une movenne mobile centrée de 12 termes (une movenne de 2 termes d'une moyenne mobile de 12 termes). Cette movenne élimine la tendance saisonnière stable ainsi que les fluctuations accidentelles et reproduit exactement une tendance générale linéaire. Les données brutes sont alors divisées par la moyenne mobile. Étant donné que les deux comportent l'élément tendance-cycle, ce calcul ne laisse essentiellement que les composantes saisonnières et accidentelles. Les estimations des facteurs de désaisonnalisation s'obtiennent ensuite en prenant la moyenne des rapports des composantes saisonnières et accidentelles pour les mois de janvier, les mois de février, etc., des années successives, de sorte que le facteur accidentel est en grande partie éliminé grâce à ces procédés de mise en moyennes. Une fois les variations saisonnières ainsi isolées en gros, elles sont éliminées des observations initiales grâce à la division de ces dernières par les facteurs de désaisonnalisation, ce qui donne une série renfermant la tendance générale, le cycle et les facteurs accidentels, mais non les facteurs saisonniers.

Le programme X-11 exécute plusieurs séries de calculs de ce rapport à la moyenne mobile. Fondamentalement, il y a trois étapes de calcul. On trouvera ci-dessous les grandes lignes de la première étape:

Les séries initiales sont lissées grâce à une moyenne mobile centrée de 12 termes, donnant ainsi une première estimation de la tendance-cycle. On calcule ensuite les ratios préliminaires des éléments saisonniers et accidentels, les facteurs saisonniers ainsi qu'une composante accidentelle. Compte tenu de la variabilité de la composante accidentelle, on établit des coefficients de pondération pour chaque valeur mensuelle afin d'estimer son degré de valeur extrême. Les valeurs se trouvant à l'extérieur de limites supérieures déterminées sont affectées du coefficient 0.0 (valeur extrême totale), les valeurs à l'intérieur de limites inférieures déterminées se voient affecter le coefficient 1.0 (valeur non extréme) et l'on attribue aux valeurs situées entre ces limites des coefficients de pondération compris entre 0.0 et 1.0 selon leur degré de valeur extrême. Quant aux valeurs dont la pondération est sous-représentative, leurs rapports composante saisonnière/ composante accidentelle sont remplacés par des ratios obtained. Using a weighted Henderson moving average of this estimate of the seasonally adjusted series, a second estimate of the trend-cycle is computed. The steps above are repeated to produce a second estimate of the seasonally adjusted series and a refined estimate of the irregular component. This irregular component is then modified for extreme values and used to develop refined weights for identifying extreme values.

A second round is then performed with essentially the same computations as above, using an original series modified by the irregular weights estimated in the first round. This second round produces final estimates of the irregular weights.

Using an original series modified by the final irregular weights computed in the second round, a third and final round is performed. In this third round, final estimates are produced of the seasonal factors, seasonally adjusted series, trend-cycle and irregular components. Summary measures are computed.

### 2. Guidelines

The guidelines employed are the standard ones developed and used in Statistics Canada. Their use assists in the judgement of the acceptability of adjusted results when applying the X-11 monthly multiplicative or additive programs. The quality assessment procedure employed exploits the X-11 summary measures (F2 tables) to yield two coefficients: the coefficient of irregularity  $(q_1)$  and the coefficient of seasonality  $(q_2)$ . The coefficient of irregularity enables one to establish whether or not the series is sufficiently regular to permit adjustment, while the coefficient of seasonality gives the degree and significance of the seasonality present in the time series and thus indicates whether or not there is sufficient seasonality in the series to warrant its adjustment.

According to the guidelines, some of the options of the X-11 were not used, such as the trading day factors and the Easter adjustment, because they apply to "flow" time series. A "flow" can be defined as the rate of economic activity measured over a period of time. The CPI, however, measures prices at specific times during a month and therefore variations in the calendar are not a factor in the calculation of the Index.

Regarding the options for choosing sigma limits for graduating extreme values in estimating seasonal and trend-cycle components, the guidelines recommend that no specific option be applied. This suggestion was followed.

modifiés et l'on calcule un deuxième ensemble de facteurs saisonniers. À partir de ces facteurs, on obtient une première estimation de la série désaisonnalisée. En se servant d'une moyenne mobile pondérée du type Henderson de cette estimation, on calcule une seconde estimation de la tendance-cycle. On passe par les étapes mentionnées plus haut pour obtenir une seconde estimation de la série désaisonnalisée et une estimation plus élaborée de la composante accidentelle. Cette dernière est alors modifée en fonction de ses valeurs extrêmes et utilisée pour déterminer des coefficients de pondération améliorés qui identifieront les valeurs extrêmes.

La seconde phase reproduit essentiellement les mêmes calculs que ci-dessus, à partir d'une série originale modifiée par les coefficients de pondération de la composante accidentelle estimés lors de la première phase. La deuxième phase produit des estimations définitives des coefficients de pondération de la composante accidentelle.

À partir d'une série originale modifée par les coefficients de pondération définitifs de la composante accidentelle calculés lors de la deuxième phase, on procède à un troisième et dernier calcul qui consiste à produire des estimations définitives des facteurs saisonniers, des séries désaisonnalisées, de la tendance-cycle et de la composante accidentelle. On calcule ensuite des mesures récapitulatives.

#### 2. Directives

Les directives utilisées sont les directives normalisées élaborées et appliquées à Statistique Canada. Elles aident à juger de l'acceptabilité des résultats de la désaisonnalisation lorsqu'on utilise les schémas mensuels multiplicatifs ou additifs du programme X-11. La procédure d'évaluation de la qualité utilisée fait appel aux mesures récapitulatives du programme X-11 (tableaux F2) pour donner deux coefficients; le coefficient d'irrégularité  $(q_1)$  et le coefficient de saisonnalité  $(q_2)$ . Le premier permet de déterminer si la série est suffisamment régulière pour permettre une désaisonnalisation tandis que le coefficient de saisonnalité donne le degré et l'importance de la saisonnalité dans la série chronologique, indiquant ainsi si la saisonnalité de la série est suffisamment importante pour justifier une désaisonnalisation.

Suivant ces directives, certaines options du programme X-11 n'ont pas été utilisées, comme le facteur jours ouvrables et l'ajustement saisonnier pour Pâques, car elles s'appliquent à des séries chronologiques de "flux". On entend par "flux" le taux de l'activité économique mesuré sur une certaine période. L'IPC cependant mesure les prix à un instant donné du mois. Les variations durant l'année n'interviennent donc pas dans le calcul de l'indice.

Pour ce qui est des options liées au choix des bornes sigma dans le calcul des valeurs extrêmes lors de l'estimation de la saisonnalité et de la tendance-cycle, les directives recommandent de n'utiliser aucune option en particulier, suggestion qui a été suivie. The guidelines also suggest that wider sigma limits be considered only if more than 20% of the irregulars are treated as extremes. This suggestion was not followed due to the small number of irregulars treated as extremes.

For seasonal factor curves it is recommended that no specific option be employed. In the calculation of these curves, the Seasonal-irregular ratios for each month are smoothed by a 3 x 5-term moving average (a 3-term average of a 5-term average) to estimate final seasonal factors. Optionally, one may specify any of the following seasonal factor curves to compute final seasonal factors for any particular month: 3, 3 x 3, 3 x 5, 3 x 9, or n-term (where "n" is the number of years of data in a particular month; i.e., a stable seasonal). The choice of the moving average to smooth the Seasonal-irregular ratios depends on the amount of irregularity in the series.

Finally, the guidelines suggest that the appropriate moving average for the variable trend-cycle component be selected. In X-11, the moving average used to estimate the trend-cycle component is selected on the basis of the amplitude of irregular variations in the data relative to the amplitude of long-term systematic variations. A moving average is chosen that provides a suitable compromise between the need to smooth the irregular with a long-term inflexible moving average and the need to accurately reproduce the systematic element with a short-term flexible moving average. For highly irregular or very smooth series, a more appropriate average is chosen. The selection is made on the basis of a preliminary estimate of the I/C ratio (the ratio of the average absolute month-to-month change in the irregular to that in the trend-cycle). This procedure was adopted for the CPI adjustment.

### Section B

### 1. Seasonal Adjustment of the Revised CPI

As indicated in Appendices 1 and 2 the published official series for Canada, unadjusted for seasonal variations, is based on different expenditure weights over time. Subsequent to September 1978, the 1974 expenditure weights are in effect. These weights supersede the 1967 expenditure patterns used between April 1973 and September 1978. Prior to this, the 1957 expenditure patterns were used.

The use of different weighting systems over time necessitates the application of monthly links to a few of the CPI item indexes and to all of the aggregate

Les directives recommandent également que l'on ne considère des bornes sigma plus larges que si plus de 20 % des éléments accidentels sont traités comme des extrêmes. Cette recommandation n'a pas été suivie étant donné le petit nombre de tels éléments.

En ce qui concerne les courbes des facteurs saisonniers, il est recommandé de n'employer aucune option en particulier. Dans le calcul de ces courbes, les ratios composante saisonnière/composante accidentelle pour chaque mois sont lissés par la movenne mobile de 3 x 5 termes (une moyenne de 3 termes d'une movenne de 5 termes) pour donner les estimations définitives des facteurs saisonniers. On peut, au choix, préciser l'une des courbes de facteurs saisonniers suivantes pour calculer les facteurs saisonniers définitifs d'un mois en particulier: 3, 3 x 3, 3 x 5, 3 x 9 ou n-termes (lorsque "n" est le nombre d'années sur lesquelles portent des données pour un mois en particulier, c.-à-d., lorsqu'il s'agit d'une saisonnalité stable). Le choix de la moyenne mobile destinée au lissage des ratios composante saisonnière/composante accidentelle dépend de l'importance de la composante accidentelle dans la série.

Les directives en question recommendent enfin de choisir la moyenne mobile appropriée pour le calcul de la composante variable tendance-cycle. Dans le programme X-11, la moyenne mobile utilisée pour estimer la composante tendancecycle est choisie en fonction de l'amplitude des variations accidentelles dans le cas des données relatives à l'amplitude des variations systématiques à long terme. On choisit une moyenne mobile qui constitue un compromis acceptable entre la nécessité de lisser la composante accidentelle grâce à une moyenne mobile rigide à long terme et la nécessité de reproduire avec précision la composante systématique grâce à une movenne mobile souple à court terme. Pour les séries très accidentées ou très stables, on choisit une moyenne plus appropriée. On fait ce choix en fonction d'une première estimation du ratio A/C (ratio de la variation absolue moyenne mensuelle de la composante accidentelle à celle de la tendance-cycle). Cette procédure a été adoptée pour l'ajustement de l'IPC.

### Section B

### 1. Désaisonnalisation de l'IPC révisé

Tel qu'indiqué aux appendices 1 et 2, les séries publiées officielles du Canada, non désaisonnalisées, sont basées sur des pondérations tirées de dépenses différentes au cours du temps. Les pondérations fondées sur les dépenses de 1974 sont effectives pour la période postérieure à septembre 1978. Ces pondérations remplacent les schémas de dépenses de 1967 qui étaient utilisés entre avril 1973 et septembre 1978. Avant cette période on avait utilisé les schémas de dépenses de 1957.

L'utilisation de différents systèmes de pondération, au cours du temps, implique un raccordement mensuel pour quelques indices de l'IPC au niveau des articles et pour tous

indexes that exist historically as a means of adjusting for the amount of difference in level resulting from the incorporation of different weights. This linking ensures that conceptually equivalent series are made continuous over time.

In the process of seasonally adjusting the CPI, the item series which require adjustment are fed into the X-11 program; the series obtained are then recombined with the rest of the item series, which are unadjusted and unlinked, to obtain seasonally adjusted aggregates. Then the appropriate linking factors are applied, where required, to alter the level of the seasonally adjusted series by the amount of alteration required for the unadjusted series. The decision to produce seasonally adjusted aggregates by summing the appropriate item series (both those that have been seasonally adjusted and those that have not) rather than directly seasonally adjusting the aggregates was taken because the detection of significant seasonality is facilitated by deseasonalizing series at the item level. This is so because item seasonality within an aggregate may be offsetting, obscuring the existence of important seasonality at the item level.

### 2. Historical Seasonally Adjusted CPI Data

The use of different weighting systems presents problems for seasonal adjustment, as the incorporation of different weights can alter seasonal patterns at the aggregate levels. One solution to this problem, the one used for the CPI, is to concentrate the seasonal adjustment process to a time period in which the weighting system remains fixed. In the current Revision, item series were rebased to 1974=100 for purposes of seasonal adjustement and aggregation (see reference paper The Consumer Price Index, Revision Based on 1974 Expenditures - Concepts and Procedures, Catalogue 62-546). However, the official published series for Canada, unadjusted for seasonal variations, incorporates the 1967 expenditure weights for the period May 1973 to September 1978. Thus, although appropriate seasonal adjustment factors were developed through use of unofficial data starting in January 1974, official deseasonalized CPI movements are available only for the period subsequent to September 1978.

### 3. Projected Factors

In general terms, the procedure is to apply the X-11 program to those of the item series which, in accordance with the guidelines, are deemed to be sufficiently seasonal to warrant their deseasonalization. The X-11 program yields, *inter alia*, monthly seasonal factors for a year ahead. The formula to obtain these projected factors is as follows:

 $S_{n+1} = S_n + 1/2 (S_n - S_{n-1})$ , where "S" is the seasonal factor and "n" is the current period of time.

les indices historiques agrégés de manière à tenir compte, par ajustment, des différences de niveau imputables à l'introduction de pondérations différentes. Ce raccordement nous permet d'assurer la continuité, au cours du temps, de séries conceptuellement équivalentes.

Lors de la désaisonnalisation des IPC, les séries à désaisonnaliser sont introduites dans le programme X-11; les séries ainsi obtenues sont alors recombinées aux autres séries, qui ne sont ni désaisonnalisées, ni raccordées, pour donner des agrégats désaisonnalisés. Les facteurs de raccordement appropriés sont ensuite éventuellement appliqués pour modifier le niveau des séries désaisonnalisées d'une quantité égale au niveau de variation nécessaire pour les séries non désaisonnalisées. On a décidé de produire des séries agrégées désaisonnalisées en prenant la somme des séries appropriées (celles qui ont été désaisonnalisées et celles qui ne l'ont pas été) plutôt que de désaisonnaliser directement les séries agrégées parce que l'on peut plus facilement dégager la saisonnalité significative par la désaisonnalisation des séries au niveau de l'article. La raison en est que la saisonnalité pour un article à l'intérieur d'une série agrégée peut être compensatoire et obscurcir une éventuelle forte saisonnalité au niveau de l'article.

# 2. Données chronologiques désaisonnalisées de l'IPC

L'utilisation de différents systèmes de pondération présente des problèmes pour la désaisonnalisation, puisque l'introduction de pondérations différentes peut modifier les caractéristiques saisonnières aux niveaux agrégés. Une solution à ce problème, celle utilisée pour l'IPC, consiste à concentrer le processus de désaisonnalisation dans une période de temps où le système de pondération demeure fixe. Pour la révision actuelle, les séries des articles ont été mises sur la base de 1974=100 pour la désaisonnalisation et l'agrégation (voir le document de référence L'indice des prix à la consommation – Révision fondée sur les dépenses de 1974 – Concepts et Procédés, nº 62-546 au catalogue). Toutefois, les séries officielles publiées du Canada, non désaisonnalisées, sont formées à partir des pondérations basées sur les dépenses de 1967 pour la période allant de mai 1973 à septembre 1978. C'est pourquoi, bien que l'on ait élaboré des facteurs de désaisonnalisation par l'emploi de données non officielles remontant à janvier 1974, les mouvements de l'IPC officiel désaisonnalisé ne portent que sur la période postérieure à septembre 1978.

### 3. Projection de facteurs

Dans l'ensemble, il s'agit d'appliquer le programme X-11 aux séries d'articles qui, conformément aux directives, semblent avoir suffisamment de saisonnalité pour justifier la désaisonnalisation. Le programme X-11 produit entre autres, des facteurs saisonniers mensuels pour une année à l'avance. Pour la projection de ces facteurs, on utilise la formule suivante:

 $S_{n+1} = S_n + 1/2$   $(S_n - S_{n-1})$ , "S" étant le facteur saisonnier et "n" la période courante.

The projected factors are used in the 12 subsequent months to seasonally adjust the appropriate item indexes. Determination of projected seasonal factors for each 12-month period is carried out at the commencement of each calendar year.

It is useful to calculate 12-month forecasts of seasonal patterns of aggregated series. Seasonally adjusted aggregate indexes, however, are built up from their individually adjusted component items, and thus are not the product of direct deseasonalization. Accordingly, in contrast to the practice of projecting seasonal adjustment factors 12 months ahead in the case of individual item series, it is not possible to determine in advance exactly what implicit seasonal factors will be applicable to aggregate series. In actual fact, in any given month seasonal adjustment factors for aggregate indexes constitute a by-product of, rather than an input to, the seasonal adjustment procedures that have been adopted. They are obtained implicitly with the formula:

Original Index
Seasonally Adjusted Index = Seasonal Factor

In order to produce forecasts of seasonal factors for aggregate series, using historical factors obtained implicitly, we apply the above formula, i.e.:

$$S_{n+1} = S_n + 1/2 (S_n - S_{n-1})$$

to obtain projected implicit seasonal factors for the aggregate series. The results of this procedure, however, will not necessarily be identical, month-bymonth, with the actual implicit factors derived from the aggregation process. The forecasts of monthly implicit seasonal factors serve only to provide a general indication of seasonal patterns.

### 4. Revision Policies

The revision of seasonally adjusted data will take place once a year and on a fixed date. To determine the extent of the revision, it has been established that:

- (i) the percentage of the difference between the new and the old seasonally adjusted values will be computed;
- (ii) the years in which more than five of the percentages obtained in section (i) are greater than one-half per cent (0.5%) will be determined; and
- (iii) the new seasonally adjusted values will be substituted for those previously published, commencing with January of the earliest full year determined in (ii).

This procedure will be followed for several reasons. First, the seasonally adjusted data for the current

On utilise les facteurs ainsi obtenus pour les 12 mois qui suivent pour désaisonnaliser les indices appropriés. La projection des facteurs saisonniers pour chaque période de 12 mois se fait au début de chaque année civile.

Il est utile de calculer des prévisions sur 12 mois des caractéristiques saisonnières des séries agrégées. Les indices agrégés désaisonnalisés, cependant, sont construits à partir de leurs composantes désaisonnalisées individuellement et ils ne sont donc pas le résultat d'une désaisonnalisation directe. En conséquence, contrairement à la méthode qui consiste à faire la projection des facteurs de désaisonnalisation 12 mois à l'avance dans le cas des séries d'articles, il n'est pas possible de déterminer à l'avance et de manière précise quels facteurs saisonniers implicites vont s'appliquer aux séries agrégées. En réalité, pour quelque mois que ce soit, facteurs de désaisonnalisation des indices agrégés constituent un sous-produit des méthodes de désaisonnalisation adoptées plutôt qu'un apport à ces dernières. Ils sont donnés par la formule suivante:

Indice initial
Indice désaisonnalisé = Facteur saisonnier

Pour obtenir des prévisions des facteurs saisonniers pour les séries agrégées, à partir des facteurs chronologiques obtenus implicitement, nous utilisons la formule ci-dessus, c.-à-d.:

$$S_{n+1} = S_n + 1/2 (S_n - S_{n-1})$$

pour calculer les projections des facteurs saisonniers implicites des séries agrégées. Toutefois, les résultats ne seront pas nécessairement toujours identiques d'un mois à l'autre aux facteurs implicites réels obtenus lors de l'agrégation. Les prévisions des facteurs saisonniers implicites mensuels ne donnent qu'une indication générale des caractéristiques saisonnières.

### 4. Principes de révision

La révision des données désaisonnalisées aura lieu une fois par an et à une date fixe. Pour déterminer l'ampleur de cette révision, on a décidé de:

- (i) calculer le pourcentage de la différence entre les anciennes et les nouvelles valeurs désaisonnalisées;
- (ii) déterminer les années où plus de cinq des pourcentages obtenus à la rubrique (i) dépassent un demi pourcent (0.5%); et de
- (iii) substituer les nouvelles séries désaisonnalisées à celles publiées auparavant, en commençant par le mois de janvier de la plus récente année complète déterminée en (ii).

Cette procédure sera suivie pour plusieurs raisons. En premier lieu, les données désaisonnalisées de l'année en cours

year have been produced using projected seasonal factors derived from previous years' unadjusted data. When the unadjusted data are available at the end of the current year, introduction of these data into the seasonal adjustment calculation will improve the quality of the adjustment for the current period. Secondly, if a new seasonal pattern, or a shift in the pattern or the amplitude is identified, these changes might well affect the seasonally adjusted results for a number of years in the historical record. Thirdly, in order to produce projected seasonal factors to be used in the following 12 months, it is necessary to incorporate the latest raw (unadjusted) data.

In addition, the revision procedure provides the opportunity to examine each item series in the light of the new information obtained in the current year, to determine if each of the item series already adjusted are still seasonal and if any of the unadjusted series have become seasonal. A change in status could occur for series which are either just outside or just inside the limits set up by the Statistics Canada guidelines. The number of such series, however, should be relatively small.

With regard to the above considerations, it has been decided to consider revision of the seasonally adjusted CPI data at the completion of each calendar year. If required, revised seasonally adjusted historical data will be released with the January CPI for the next year.

#### Section C

# Seasonally Adjusted Groups and Items

The seasonality identified in the CPI is mainly concentrated in about one third of the items that comprise it, the other two-thirds exhibit very little seasonality.

Those items exhibiting sufficient seasonality to warrant their adjustment are included in the groups listed below:

Food

Food for home consumption

Meat, poultry and fish

Beef

Pork

Poultry

Fruit and vegetables

Fresh fruit

Fresh vegetables

ont été calculées grâce aux projections de facteurs saisonniers obtenus à partir de données non désaisonnalisées d'années précédentes. Lorsque l'on dispose de données non désaisonnalisées à la fin de l'année en cours, l'introduction de ces données dans le calcul de désaisonnalisation améliore la qualité de la désaisonnalisation pour la période en cours. Deuxièmement, si l'on détecte une nouvelle caractéristique saisonnière ou une modification de l'amplitude d'une caractéristique, ces changements pourraient bien affecter les résultats de la désaisonnalisation pour un certain nombre d'années dans la série chronologique. Enfin, pour effectuer la projection de facteurs saisonniers destinés à être utilisés pour les 12 mois suivants, il est nécessaire d'incorporer les dernières données brutes (non désaisonnalisées).

De plus, la révision fournit l'occasion d'étudier chaque série d'articles à la lumière des nouveaux renseignements obtenus au cours de l'année courante, pour déterminer si chacune des séries déjà désaisonnalisée contient encore de la saisonnalité, ou si l'une des séries non désaisonnalisées contient maintenant de la saisonnalité. La nature des séries qui sont situées soit juste à l'extérieur, soit juste à l'intérieur des limites définies par les directives de Statistique Canada pourrait s'en trouver modifiée. Ces séries devraient cependant demeurer relativement peu nombreuses.

Compte tenu des considérations énoncées ci-dessus, il a été décidé d'envisager la révision des données désaisonnalisées de l'IPC à la fin de l'année civile. Au besoin, on publiera les données chronologiques désaisonnalisées révisées avec l'IPC de janvier pour l'année suivante.

### Section C

### Groupes et articles désaisonnalisés

La saisonnalité isolée dans l'IPC se concentre principalement sur le tiers environ des éléments constitutifs, les deux autres tiers présentant très peu de saisonnalité.

Le groupe ci-dessous est la liste des éléments qui présentent suffisamment de saisonnalité pour justifier leur désaisonnalisation:

Aliments

Aliments consommés à la maison

Viandes, volaille et poisson

Boeuf

Porc

Volaille

Fruits et légumes

Fruits frais

Légumes frais

Housing

Shelter

Household operation

Clothing

Women's wear Girls' wear Men's wear Boys' wear

Transportation

Health and personal care

Recreation, reading and education

Tobacco and alcohol

CPI Reclassified by Goods and Services

Goods

Durable goods Semi-durable goods Non-durable goods

Non-durable goods excluding food

Services

All-items excluding food

Habitation

Logement

Dépenses de ménage

Habillement

Vêtements pour femmes Vêtements pour filles Vêtements pour hommes Vêtements pour garçons

Transports

Santé et soins personnels

Loisirs, lecture et formation

Tabacs et boissons alcoolisées

Classification complémentaire de l'IPC par biens et services

# Appendix 4

### CITY AVERAGE RETAIL PRICES

### 1. Introduction

The Prices Division of Statistics Canada collects. each month, many thousands of retail prices in most of the large centres across the country. However, though these prices may be entirely suitable for compiling the Consumer Price Index, they do not necessarily yield representative and comparable average prices. There are a number of reasons for this. Variations in food habits and in the brands selected among cities cause city-to-city differences that do not represent real price differentials for the same quality. The brands selected for the production of the CPI are the volume sellers, both manufacturers' and private label brands and the Index produced for any one city, as well as for Canada, will be based upon the price movements of a heterogeneous mixture that might well be quite different from the heterogeneous mixture of another city. To produce an accurate measure of price change within a city, it is essential to ensure that the quantities, brands and sizes selected are sufficiently important to represent price movement. However, to produce an accurate measure of average prices at one point in time which will permit comparison between cities, it is essential that the qualities, brands and sizes selected are sufficiently similar so as not to artificially generate price differentials.

Further, although market forces will generally impose a certain degree of uniformity on price movements within a city, price ranges at any point of time can nevertheless still be quite wide. Thus, a sample of retail outlets which is sufficiently large to accurately monitor price movement, might well be too small to adequately encompass price spreads at one point of time.

Thus, in order to satisfactorily produce representative and comparable average prices, it was deemed necessary to undertake a special pricing survey which had the features outlined below.

# 2. Average Prices Survey

The Average Retail Prices Surveys are normally undertaken during the second or third week of October

# Appendice 4

# PRIX DE DÉTAIL MOYENS PAR VILLE

### 1. Introduction

La Division des prix de Statistique Canada recueille chaque mois des milliers de prix de détail dans la plupart des grands centres urbains du pays. Mais, bien que ces prix puissent entièrement servir à la confection de l'indice des prix à la consommation, ils ne donnent pas nécessairement des prix moyens représentatifs et comparables. Il y a un certain nombre de raisons à cela. Les différences entre les habitudes de dépenses alimentaires et les marques choisies dans les différentes villes entraînent des différences entre villes qui ne représentent pas les différences réelles entre les prix pour un produit de même qualité. Les marques retenues pour la confection de l'IPC sont les articles qui se vendent en grandes quantités, qu'il s'agisse de marques de commerces de fabricants ou d'entreprises individuelles et l'indice d'une ville quelconque, ainsi que celui de l'ensemble du Canada sera basé sur le mouvement des prix d'un ensemble hétérogène qui peut fort bien différer assez sensiblement de l'ensemble d'une autre ville. Pour obtenir une mesure adéquate des mouvements de prix dans une ville, il est essentiel de s'assurer que les quantités, les marques et les tailles choisies soient suffisamment importantes pour représenter le mouvement des prix. Cependant, afin d'obtenir une mesure adéquate des prix moyens à un instant donné qui permette une comparaison entre villes, il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire artificiellement des différences de prix.

Par ailleurs, bien que les forces agissant sur le marché vont en général imposer un certain degré d'uniformité aux mouvements de prix dans une ville, l'intervalle des prix à un instant donné peut être néanmoins assez étendu. Ainsi, un échantillon de magasins de détail suffisamment important pour suivre précisément le mouvement des prix peut très bien se révéler trop petit pour représenter adéquatement l'éventail des prix à un temps donné.

Donc, afin d'obtenir des prix moyens représentatifs et comparables qui soient satisfaisants, on a jugé nécessaire d'entreprendre une enquête spéciale d'observation des prix, dont les caractéristiques sont décrites ci-dessous.

# 2. Enquête sur les prix moyens

Une enquête sur les prix moyens de détail est normalement effectuée durant la deuxième ou troisième semaine and April. Prices of approximately 60 items, consisting mainly of food and some personal care and household supply products, are collected in a large number of outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Sault Ste. Marie, Thunder Bay, Winnipeg, Saskatoon, Regina, Calgary, Edmonton, Vancouver and Victoria.

The sample of stores is designed so that the outlets selected have, between them, approximately half or more of the grocery store sales for each city. Grocery stores are defined, for purposes of this Survey, as those with meat sales valued at between 15% and 50% of total sales. Sales data are derived from Census of Merchandising information, updated, where necessary, by local advice from Statistics Canada Regional Offices.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

# 3. Calculation Methodology

### (a) City Prices

Prices are collected in both chain and independent stores. (A chain store organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

# (b) Weighted City Averages

A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

d'octobre et d'avril. Les prix de quelque 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Sault Ste. Marie, Thunder Bay, Winnipeg, Saskatoon, Régina, Calgary, Edmonton, Vancouver et Victoria.

L'échantillon des magasins est défini de telle façon que les points de vente choisis, pris ensemble, comptent pour environ la moitié ou plus des ventes des épiceries dans chaque ville. Aux fins de cette enquête, les épiceries étaient définies comme celles dont les ventes de viande représentaient entre 15 % et 50 % du total des ventes. Les données des ventes sont dérivées à partir des données du recensement des marchandises, mises à jour, lorsque nécessaire, sur recommandation des bureaux régionaux de Statistique Canada.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

### 3. Méthode de calcul

#### a) Prix urbains

Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas ces articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

### b) Moyennes pondérées des villes

Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

# 4. Monthly Updating of Price Averages

The considerable resources required to collect and analyse the data to produce representative and comparable average prices cannot be expended each month. It therefore becomes necessary to update the survey prices on a regular monthly basis until another average prices survey can be undertaken. Because such updated prices are not themselves the direct product of an expanded average prices survey, but instead are calculated by the application of some measure to the actual averages, they are designated as "Calculated Average Prices".

Under normal circumstances a readily available method of producing Calculated Average Prices for the month subsequent to the survey months would be to apply the movement of the relevant city and item CPI to the corresponding average prices for the survey months. However, because price collection for the survey months falls between the pricing dates for the October and November or April and May CPI, the price movement for these periods for certain items has to be adjusted to take into account this time lag. For the months subsequent to November or May, the full month-to-month movement is applied to the latest available calculated average prices to produce the following month's calculated average prices. Occasionally, in periods of volatile price movements, the methodology employed in adjusting prices falling between the CPI pricing dates becomes extremely subjective, yielding results which are open to misinterpretation. Calculated Average Prices for items falling in this category may, therefore, not be published. It is important to note that the Calculated Average Prices are estimates of retail price levels in each city. Since they are not derived from actual surveys of prices in the marketplace, but rather from an updating of previously gathered price information, they may not always precisely reflect actual market conditions at a specific point in time.

Updated calculated average prices are, at present, published only for the 14 index cities. This is attributable to the limited experience which has been acquired in using this updating methodology for the 12 non-index cities.

## 5. Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey is provided in the immediately following pages.

# 4. Mise à jour mensuelle des moyennes de prix

On ne peut consacrer chaque mois les ressources considérables nécessaires à la collecte et à l'analyse des données pour produire des prix moyens représentatifs et comparables. Il devient donc nécessaire de mettre à jour les prix de l'enquête sur une base mensuelle régulière jusqu'à ce qu'il soit possible d'entreprendre une autre enquête sur les prix moyens. Étant donné que ces prix mis à jour ne sont pas eux-mêmes le produit direct d'une enquête exhaustive sur les prix moyens, mais qu'ils sont au contraire calculés par l'application d'une certaine mesure aux moyennes réelles, on les qualifie de "prix moyens calculés".

Dans des conditions normales, une méthode rapidement applicable pour obtenir des prix moyens calculés pour le mois de novembre consiste à appliquer le mouvement des IPC des articles en question aux prix moyens d'octobre de la ville observée. Cependant, la date du relevé des prix de l'enquête se situant entre les dates des relevés de prix des IPC d'octobre et novembre ou d'avril et mai. Il faut ajuster la variation de prix de ces périodes pour certains articles afin de tenir compte de cet écart de temps. Pour le mois suivant, novembre ou mai, la variation totale d'un mois à l'autre peut s'appliquer au dernier prix moyen calculé disponible pour obtenir le prix moyen calculé du mois suivant. Occasionnellement, dans des périodes où les prix sont très volatiles, la méthodologie utilisée pour rajuster les prix entre les relevés de l'IPC devient extrêmement subjective, produisant ainsi des résultats que l'on pourrait mal interpréter. Il se pourrait, donc, que les prix moyens calculés pour les articles se rapportant à cette catégorie ne soient pas publiés. Il est important de noter que les prix moyens calculés sont une estimation du niveau des prix moyens dans chaque ville. Comme ils ne proviennent pas d'enquêtes réelles sur les prix pratiqués mais représentent plutôt une mise à jour de renseignements sur les prix recueillis auparavant, ils ne rendent pas toujours compte avec précision de la conjoncture commerciale à un instant donné.

Les prix moyens calculés ne sont présentement publiés que pour les 14 villes dont on produit un indice séparé à cause de notre expérience limitée face à l'utilisation de la méthode de mise à jour pour les 12 villes dont on ne produit pas un indice séparé.

# 5. Spécifications des articles

Les pages qui suivent, présentent une description des quelques 60 articles contenus dans l'enquête des prix moyens.

# CITY AVERAGE RETAIL PRICES – ITEM SPECIFICATIONS

# **Detailed Specification**

### **Dairy Products**

Milk. Fresh fluid whole dairy milk, pasteurized, may be homogenized or contain vitamin D. Disposable carton of 1 litre.

Evaporated milk. Generally available manufacturers' brands (store brands excluded), unsweetened, may be vitaminized, 16-ounce can.

Powdered milk. Generally available manufacturers' brands (store brands excluded), powdered skim milk, 3-pound card-board package, may be pasteurized or vitaminized.

Ice cream. Store brand, vanilla or chocolate, between 10% and 12% milk fat content in regular (non-fancy) container of 2 litres.

Butter. Lowest price available in store for first grade, creamery butter, salted, parchment wrapped, 1 pound.

Cheese. Generally available manufacturers' brands (store brands excluded), process cheese square slices, plain, without seasoning, relishes or condiments, individually wrapped, 1/2 pound.

### Poultry and Eggs

Chicken. Eviscerated, fresh or frozen, broiler or fryer, whole, 2 to 4 pounds, Grade A, price per pound.

Eggs. Large eggs, Grade A, in a carton of 1 dozen. Medium eggs, Grade A, in a carton of 1 dozen.

### Beef

Sirloin steak. Cut from section of hind quarter next to short loin, bone-in or partially boned, fresh, Canada A or B brand, pound.

Round steak. Full cut of section of hind quarter next to rump, fresh, Canada A or B brand, boneless, pound.

Prime rib roast. Standing, bone-in, short cut, 7 inches, any ribs within the first five of standard seven, fresh, Canada A or B brand, pound.

# PRIX DE DÉTAIL MOYENS PAR VILLE — SPÉCI-FICATIONS DES ARTICLES

# Spécification détaillée

### **Produits laitiers**

Lait. Lait de laiterie frais, liquide, entier, pasteurisé, peut être homogénéisé ou additionné de vitamine D. Contenant de 1 litre (en carton), non consigné.

Lait évaporé. Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré, peut être additionné de vitamines, boîte de 16 onces.

Lait en poudre. Marques des fabriquants largement distribuées (sauf les marques des magasins), lait écrémé en poudre, contenant en carton de 3 livres, peut être pasteurisé ou vitaminé.

Crème glacée. Marque du magasin, à la vanille ou au chocolat, contenant de 10 % à 12 % de matière grasse de lait dans des contenants réguliers (non de fantaisie), 2 litres.

Beurre. Beurre de première qualité, le moins cher disponible dans le magasin, beurre de laiterie, salé, enveloppé dans du parchemin, 1 livre.

Fromage. Marques des fabricants largement distribuées (sauf les marques des magasins), fromage fondu, en tranches carrées, enveloppées individuellement, nature, sans assaisonnement, ni relish, ni condiments, 1/2 livre.

#### Volaille et oeufs

Poulet. Vidé, frais ou congelé, à griller ou à frire, entier, de 2 à 4 livres, catégorie A, vendu à la livre.

Oeufs. Oeufs de grosse taille, catégorie A, en boîte de 12. Oeufs de taille moyenne, catégorie A, en boîte de 12.

### Boeuf

Bifteck de surlonge. Morceaux coupés dans la partie du quartier de derrière voisine du bout de longe, non désossé ou partiellement désossé, frais, marque Canada A ou B, livre.

Bifteck dans la ronde. Coupe entière d'une section du quartier de derrière voisine de la croupe, frais, marque Canada A ou B, désossé, livre.

Rôti de côtes de choix. Nature, non désossé, coupe courte, 7 pouces, toutes les côtes parmi les cinq premières sur les sept côtes normales, frais, marque Canada A ou B, livre.

### Beef - Concluded

Blade roast (blade in). Cut from fore quarter next to rib section, fresh, Canada A or B brand, pound.

Blade roast (blade out). Cut from fore quarter next to rib section, fresh, Canada A or B brand, pound.

**Stewing beef.** Boneless stewing beef, fresh, Canada A or B brand, pound.

Ground beef, regular. Ground beef, with 24% to 30% fat content, fresh, pound.

### Pork

Pork, centre cut chops. Cut from centre of loin, fresh, bone-in, trimmed, excluding "fast fry", "brown and serve", "rib chops", mixed cut, pound.

Pork, butt roast. Cut from top half of shoulder, fresh, skin removed, about 1/2 inch fat left on, Boston Butt, pound.

Pork, butt roast. Cut from top half of shoulder, fresh, skin removed, about 1/2 inch fat left on, Boneless Butt, pound.

Sausages. Generally available manufacturers' brands (store brands excluded), pure pork sausages, fresh or frozen, pound.

**Bacon**. Generally available manufacturers' brands (store brands excluded), smoked, side bacon, sliced, rind off, vacuum packaged, packers first line.

## Other Meat

Wieners. Generally available manufacturers' brands (store brands excluded). Made from beef and pork, ground, skinless, smoked and cooked, vacuum packaged, first grade, pound.

### Fish

Salmon. Generally available manufacturers' brands (store brands excluded). British Columbia, sockeye salmon, first grade, stamped "Canada", 7 3/4 ounce tin.

### Boeuf - fin

Rôti de palette (non désossé). Rôti coupé dans la partie du quartier de devant voisine de la section des côtes, frais, marque Canada A ou B, livre.

Rôti de palette (désossé). Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, livre.

Boeuf à ragoût. Désossé, boeuf à ragoût, frais, marque Canada A ou B, livre.

Boeuf haché régulier. Boeuf haché, matières grasses: 24 % à 30 %, frais, livre.

#### Porc

Porc, côtelettes, partie du centre. Coupe provenant du centre de la longe, frais, non désossé, paré, sauf les côtelettes "à cuisson rapide", "faire dorer et servir", "côtelettes de côtes", coupes diverses, livre.

Porc, rôti de porc. Rôti coupé dans la moitié supérieure de l'épaule, frais, couenne enlevée, reste environ 1/2 pouce de gras, "Boston Butt", livre.

Porc, rôti de porc. Rôti coupé dans la moitié supérieure de l'épaule, frais, couenne enlevée, reste environ 1/2 pouce de gras, rôti désossé, livre.

Saucisses de porc. Marques des fabriquants largement distribuées (sauf les marques des magasins), saucisses de pur porc, livre.

Bacon. Marques des fabriquants largement distribuées (sauf les marques des magasins), fumé, bacon de flanc, en tranche, couenne enlevée, emballé sous vide, fabricants de première qualité.

#### Autre viande

Saucisses de Francfort. Marques des fabricants largement distribuées (sauf les marques des magasins). Faites de boeuf et de porc haché, sans peau, fumées et prêtes à servir, emballées sous vide, première qualité, livre.

#### Poisson

**Saumon**. Marques des fabricants largement distribuées (sauf les marques des magasins). Saumon de Colombie-Britannique, sockeye, de première qualité, étiqueté "Canada", boîte de 7 3/4 onces.

#### Fats

Shortening. Generally available manufacturers' brands (store brands excluded), processed from blends of edible vegetable oils and animal fats. May be partly hydrogenated, carton of 1 pound.

### **Bakery and Cereal Products**

Flour, 2.5 kg. Generally available manufacturers' brands (store brands excluded) of white all purpose, vitaminized flour. Excluding instantized, pastry and other special types, weight change as of October 1978.

Flour, 3.5 kg. Generally available manufacturers' brands (store brands excluded) of white all purpose, vitaminized flour. Excluding instantized, pastry and other special types, weight change as of October 1978.

Corn flakes. Generally available manufacturers' brands (store brands excluded), corn flakes, 675 g package, weight change as of October 1978.

**Spaghetti.** Generally available manufacturers' brands (store brands excluded) of ready cut long spaghetti, 2-pound package.

Bread. Store brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched.

**Bread**. Manufacturers' brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched.

Soda crackers. Generally available manufacturers' brand (store brands excluded), salted, unsalted or saltines, 16 ounces.

### Sugar and Sweets

Sugar. White, granulated, cane or beet sugar, bag of 2 kilograms.

Jam. Generally available manufacturers' brands (store brands excluded), pure strawberry jam, 9-ounce glass jar.

#### Fruit

Oranges. California, medium size (138 or 113) price per pound.

### Matières grasses

Graisse végétale. Marques des fabricants largement distribuées (sauf les marques des magasins), fabriquée à partir de mélanges d'huiles végétales comestibles et de graisses animales. Peut être partiellement hydrogénée, carton de 1 livre.

### Céréales et produits de boulangerie

Farine, 2.5 kg. Marques des fabricants largement distribuées (sauf les marques des magasins) blanche tout usage, additionnée de vitamines. Exclure la farine instantanée, la farine à pâtisserie et les autres types spéciaux de farine, changement de poids en octobre 1978.

Farine, 3.5 kg. Marques des fabriquants largement distribuées (sauf les marques des magasins), farine tout usage, additionnée de vitamines. Exclure la farine instantanée, la farine à pâtisserie et les autres types spéciaux de farine, changement de poids en octobre 1978.

Flocons de mais. Marques des fabricants largement distribuées (sauf les marques des magasins), mais en flocons, paquet de 675 g, changement de poids en octobre 1978.

Spaghetti. Marques des fabricants largement distribuées (sauf les marques des magasins), spaghetti, coupe longue, paquet de 2 livres.

Pain. Marques des magasins, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines.

Pain. Marques des fabricants, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines.

Biscuits soda. Marques des fabricants largement distribuées (sauf les marques des magasins), salés, non salés ou "saltines", paquet de 16 onces.

### Sucre et produits sucrés

**Sucre**. Blanc, cristallisé, de canne ou de betterave, sac de 2 kilogrammes.

Confiture. Marques des fabricants largement distribuées (sauf les marques des magasins), pure, de fraises, pot de verre de 9 onces.

### Fruits

Oranges. De Californie, grosseur moyenne (138 ou 113) prix à la livre.

# Fruit - Concluded

**Grapefruit**. United States, white, may be seedless, size 48's, if not available 40's or 56's, good quality, price per pound.

Bananas. First grade, price per pound.

Apple juice. Generally available manufacturers' brands (store brands excluded), unsweetened, natural, may be vitaminized, choice grade, single strength, 48 ounces.

# Vegetables

**Potatoes.** Table potatoes, white, Canada No. 1, 10-pound bag.

Onions. Cooking onions, common white, yellow or red, dry, good quality, in plastic or cellophane packages (up to a 3-pound package), price per pound.

Carrots. Tops completely removed, good quality, in plastic or cellophane packages (up to a 3-pound package), price per pound.

Cabbage. Fresh, domestic or imported, green cabbage, good quality, price per pound of an average size head.

Celery. Celery stalks, green, fresh, may be trimmed or clipped, price per pound.

Lettuce. Fresh head, green, good quality, average size head, price per pound.

Tomatoes, canned. Generally available manufacturers' brands (store brands excluded), of canned field tomatoes, choice grade, 28 fluid ounces.

Infants' food. Generally available manufacturers' brands (store brands excluded) of baby food, strained or vegetable mixture, glass jar or can of 4 1/2 ounces.

Beans. Generally available manufacturers' brands (store brands excluded) of cooked beans with pork and tomato sauce, 14 fluid ounces.

Soup. Generally available manufacturers' brands (store brands excluded) of vegetable soup, approximately 10 ounces.

Tomato juice. Generally available manufacturers' brands (store brands excluded), juice of fresh tomatoes, may contain salt, sugar or dextrose, fancy grade, 48 ounces.

# Fruits - fin

Pamplemousses. Des États-Unis, à chair blanche, grosseur 48; autrement, grosseur 40 ou 56, bonne qualité, prix à la livre.

Bananes. Première qualité, vendues à la livre.

Jus de pommes. Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré, naturel, peut être additionné de vitamines, catégorie de choix, n'ayant pas été dilué, boîte de 48 onces liquides.

# Légumes

Pommes de terre. Pommes de terre de table, à chair blanche, catégorie Canada nº 1, sac de 10 livres.

Oignons. Oignons à cuire, ordinaires, blancs, jaunes ou rouges, secs, bonne qualité, en paquet de matière plastique ou de cellophane (paquet jusqu'à 3 livres), vendus à la livre.

Carottes. Queues complètement enlevées, bonne qualité, paquet de matière plastique ou de cellophane (paquet jusqu'à 3 livres), vendues à la livre.

Choux. Frais, variété canadienne ou importée, choux vert, bonne qualité, prix à la livre d'un chou de grosseur moyenne.

Céleri. Pieds de céleri, verts, frais, peuvent être taillés, prix à la livre.

Laitue. Fraîche, verte, bonne qualité, taille moyenne, prix à la livre.

Tomates, en conserve. Marques des fabricants largement distribuées (sauf les marques des magasins), de tomates en conserve de plein champ, catégorie de choix, boîte de 28 onces liquides.

Nourriture pour bébés. Marques des fabricants largement distribuées (sauf les marques des magasins), de nourriture pour bébés, égouttée ou en purées, pots de verre ou boîte de 4 1/2 onces.

Fèves au lard. Marques des fabricants largement distribuées (sauf les marques des magasins), de fèves au lard cuites avec du porc et de la sauce tomate, boîte de 14 onces liquides.

Soupe. Marques des fabricants largement distribuées (sauf les marques des magasins) de soupe aux légumes, boîte d'environ 10 onces.

Jus de tomates. Marques des fabricants largement distribuées (sauf les marques des magasins) de jus de tomates fraîches; peut contenir du sel, du sucre ou du dextrose, catégorie de fantaisie, 48 onces.

# Beverages

Tea bags. Generally available manufacturers' brands (store brands excluded), orange pekoe tea bags, package of 60 two-cup paper bags (8 ounces).

Coffee, regular. Generally available manufacturers' brands (store brands excluded), roasted whole beans, regular or all purpose ground coffee, good quality, 1 pound paper bag.

Coffee, instant. Generally available manufacturers' brands (store brands excluded), dried coffee, extract, soluble, pure or may have added dextrin, dextrose or maltose, 6 ounces.

Soft drinks. Generally available manufacturers' brands (store brands excluded), cola flavour. Returnable bottle type, excluding deposits. One bottle of 750 ml.

## Miscellaneous Groceries

Jelly powder. Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 3 ounces.

# **Supplies and Personal Care Items**

Synthetic detergent powder. Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 42 ounces.

Scouring powder. Generally available manufacturers' brands (store brands excluded), cleansing powder or cleanser with bleaching agent, 3 litres.

Toilet paper. Generally available manufacturers' brands (store brands excluded) of white or pastel shades, medium quality, perforated, single sheet tissue. Multiple units of 2, about 600 to 650 sheets in roll, approx. 4" x 5", wrapped in poly. Price per roll.

Toilet soap. Generally available manufacturers' brands (store brands excluded). Selection confined to wrapped and popular brands sold in multiple units of three or four bars per package. Guest or bath sizes, as well as varieties with high synthetic or perfume content, excluded. Price per bar.

**Toothpaste**. Generally available manufacturers' brands (store brands excluded), standard dentifrice, may have fluoride, 50 ml.

### **Boissons**

Thé en sachets. Marques des fabricants largement distribuées (sauf les marques des magasins), thé en sachets "orange Pekoe" paquet de 60 sachets de papier pour deux tasses chacun (8 onces).

Café régulier. Marques des fabricants largement distribuées (sauf les marques des magasins), torréfié, en grains entiers, ordinaire ou moulu "tout usage", bonne qualité, sacs en papier de 1 livre.

Café instantané. Marques des fabricants largement distribuées (sauf les marques des magasins), séché, extrait, soluble, pur ou peut être additionné de dextrine, de dextrose ou de maltose, pot de 6 onces.

Boissons gazeuses. Marques des fabricants largement distribuées (sauf les marques des magasins), saveur de cola. Bouteille consignée, prix de la bouteille non compris. Une bouteille de 750 ml.

# Articles divers d'épicerie

Poudre à gelée. Marques des fabricants largement distribuées (sauf les marques des magasins), de poudre à gelée pour dessert à saveur, paquet de 3 onces.

# Fournitures et articles de soins personnels

Détersif synthétique en poudre. Marques des fabricants largement distribuées (sauf les marques des magasins), tout usage, cristallisé ou en poudre, boîte de 42 onces.

Poudre à récurer. Marques des fabricants largement distribuées (sauf les marques des magasins), poudre à récurer avec agent de blanchiment, contenant de 3 litres.

Papier hygiénique. Marques des fabricants largement distribuées (sauf les marques des magasins), blanc ou de couleur pastel, qualité moyenne, perforé, une seule épaisseur. Paquets de 2, d'environ 600 à 650 feuilles par rouleau, 4" x 5", enveloppés dans du polyéthylène. Prix par rouleau.

Savon de toilette. Marques des fabricants largement distribuées (sauf les marques des magasins). Choix limité aux marques emballées et populaires vendues en groupe de trois ou quatre pains par paquet. Les savons de taille pour invité ou de bain de même que les variétés à contenu synthétique ou de parfum, sont exclus. Prix à l'unité.

Pâte dentifrice. Marques des fabricants largement distribuées (sauf les marques des magasins), pâte dentifrice ordinaire peut contenir du fluorure, tube de 50 ml.

# Supplies and Personal Care Items - Concluded

Cleansing tissues. Generally available manufacturers' brands (store brands excluded), package of 200 double tissues, approximately 8" to 8 1/2" x 9 1/2" size.

# Tobacco

Cigarettes. Generally available popular brands, king size, filter tip, carton of 200.

# Fournitures et articles de soins personnels - fin

Papier-mouchoir. Marques des fabricants largement distribuées (sauf les marques des magasins), paquet de 200 mouchoirs double-épaisseur, taille approximative de 8" à 8 1/2" x 9 1/2".

### **Tabacs**

Cigarettes. Marques populaires couramment disponibles, grand format, bout filtre, carton de 200.

# Appendix 5

# CANADIAN INTER-CITY RETAIL PRICE COMPARISONS

Table 12 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of commodities and services at the specified point in time.

The data base of this place-to-place study of comparative retail prices was largely drawn from the large volume of price quotations collected for the production of the monthly city consumer price indexes. For the inter-city food price differentials, however, use was also made of data gathered in a special program of pricing undertaken annually for publication of City Average Retail Prices.<sup>1</sup>

In developing these spatial price relationships, efforts were made to achieve comparability by seeking to equate qualities of goods and services in the various locations and by matching types of retail outlets so far as possible. To optimize price comparability between locations, differential price measurements were initially derived separately as between the following pairs of cities:

St. John's - Halifax Charlottetown - Halifax Saint John - Halifax Ottawa - Halifax Toronto - Montréal Ottawa - Toronto Toronto - Winnipeg - Winnipeg Regina Edmonton - Winnipeg Edmonton - Vancouver

Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names whenever possible and also with some regard for comparability of retail outlets and merchandising practises. By means of a linking procedure, the paired city item indexes were initially compared with their counterparts in a common base city; subsequently they were related to the weighted average of the combined 11 cities equalling 100. The city-to-city price relationships for individual items thus derived were than aggregated by

# Appendice 5

# COMPARAISONS ENTRE LES PRIX DE DÉTAIL DANS DIFFÉRENTES VILLES DU CANADA

Le tableau 12 présente les différences de prix à la consommation de 11 villes du Canada, situées dans les 10 provinces, pour un nombre choisi de biens et de services, pour la période de temps spécifiée.

Les données de cette étude comparative de prix de détail proviennent en grande partie du relevé de prix utilisé pour la production de l'indice mensuel des prix à la consommation. On a, toutefois, utilisé les données obtenues dans le cadre d'un programme annuel spécial de relevé des prix servant à la publication des prix de détail moyens par ville¹ pour déterminer les différences de prix de la nourriture entre les villes.

Des efforts ont été entrepris pour développer des comparaisons valables en cherchant à obtenir des qualités identiques de biens et de services dans les différents endroits et en couplant, lorsque possible, des points de vente au détail comparables, pour déterminer les relations de prix spatiales. Afin d'optimiser la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour les paires de villes suivantes:

St. John's - Halifax Charlottetown — Halifax - Halifax Saint John Ottawa - Halifax Toronto - Montréal Ottawa - Toronto - Winnipeg Toronto - Winnipeg Regina Edmonton - Winnipeg - Vancouver Edmonton

À l'intérieur de chaque paire de villes, les prix ont été couplés au niveau de l'article en s'assurant que les spécifications étaient identiques, y compris les marques, lorsque c'était possible et aussi en tenant compte de la comparaison des points de vente au détail et des méthodes de vente. Grâce à la procédure de couplage, les indices couplés des villes ont d'abord été comparés au niveau de l'article et transformés sur la base d'une ville commune, ils ont ensuite été reliés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Les relations entre les prix d'articles entre les villes ainsi déduites ont été regroupées en applicant le schéma de

<sup>1</sup> See Table 10 and Appendix 4.

<sup>1</sup> Voir tableau 10 et appendice 4.

application of the combined 11-city CPI weighting patterns,<sup>2</sup> updated for price change to the time of the intercity retail price comparison study. Measurements of inter-city retail price differentials are updated, as required, by application of the relative movement of item prices in each city, obtained from the relevant city CPI.

It should be noted, especially in periods of volatile price movement, that city-to-city retail price relationships may be significantly affected by the timing and the relative rate of price change occurring in each location. Furthermore, since the retail prices used in this study are those faced by consumers, they include sales and excise taxes as applicable. Thus, comparative rates of provincial sales tax in effect in the various cities at the time of price comparison, as well as changes in the rate of incidence of such taxes, can be of importance in explaining inter-city price differentials for tax-affected items or groups of items.

pondération de l'IPC des 11 villes combinées<sup>2</sup>, mis à jour par la variation de prix qui s'est effectuée jusqu'au moment de l'étude comparative des prix de détail entre les villes. Les mesures de comparaison des prix de détail entre villes sont mises à jour, lorsque nécessaire, en utilisant le mouvement des prix obtenu des IPC de chaque ville, au niveau de l'article.

Il convient de noter, surtout dans une période de fluctuation des prix, que les relations entre les prix de détail d'une ville à l'autre peuvent varier de façon significative selon la période de relevé des prix et le taux relatif de variation des prix à chaque endroit. De plus, puisque les prix de détail utilisés pour cette étude sont ceux que les consommateurs doivent payer, les taxes de vente et d'accise y sont incluses. Donc, les taux comparatifs des taxes de vente provinciale effectives dans les diverses villes au temps de la comparaison, de même que le changement dans le taux ou l'incidence de ces taxes, peuvent être importantes pour expliquer les différences de prix entre les villes des articles ou groupes d'articles taxables.

# Appendix 6

# INTERNATIONAL RETAIL PRICE COM-PARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price level are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these items by means of benefits separate from those regu-

# Appendice 6

# COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créé. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10 % au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5 % à 12.4 % supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas prix au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par

lated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial interprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price

des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la revision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé

relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisions. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada.

de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

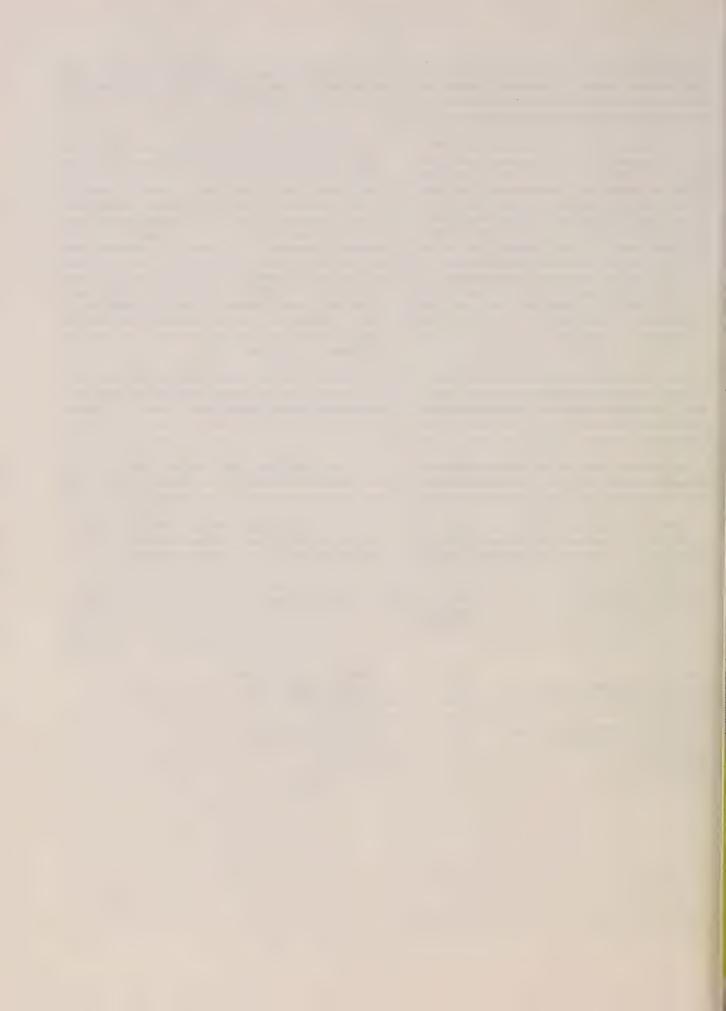

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au points en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer jusqu'au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada.

# Symbols

The following standard symbols are used in Statistics Canada publications:

- . . figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- - amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- X confidential to meet secrecy requirements of the Statistics Act.

# NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-economic Information Management System). In general, CANSIM provides a longer historical series. For further information on CANSIM call (613) 995-7406 or write Chief, Current Economic Analysis Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

# Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
  - néant ou zéro.
- - nombres infimes.
- P nombres provisoires.
- r nombres rectifiés.
- X confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

# NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Pour plus d'information sur CANSIM, signaler (613) 995-7406 ou écrire au chef, Division des analyses de conjoncture, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A 0T6.

# Introduction

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of more timely and more detailed statistical information to better serve user needs.

Part I of this report presents a synopsis of current consumer price index movements for each of the three months in the reference quarter, at both the urban Canada and the regional cities' level. This is presented in the form of descriptive analysis supported by tabular and graphic information.

Part II provides a detailed historical summary of monthly consumer price index movements in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Place-to-place comparative retail price information forms Part III of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 to 6 present background information relating to place-to-place retail price comparisons.

# Introduction

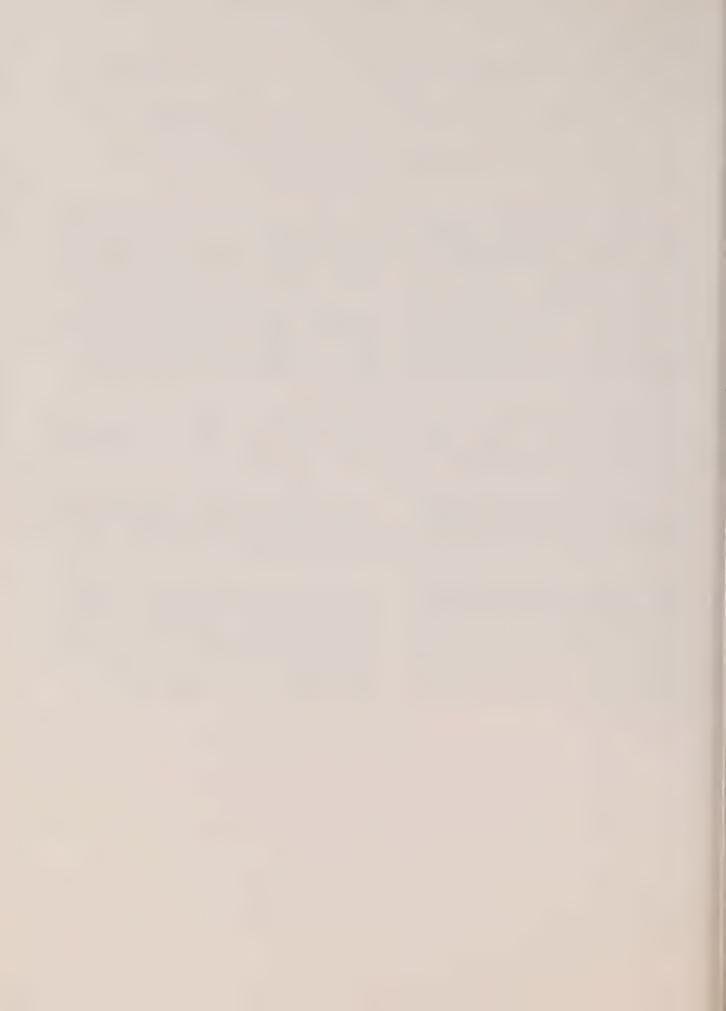

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, plus rapidement et d'une façon plus détaillée, afin de mieux rencontrer les besoins des utilisateurs.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation de chaque mois du trimestre pour le Canada et les agglomérations urbaines. Ces informations sont présentées sous la forme d'analyses descriptives appuyées de tableaux et de graphiques.

La partie II fournit un résumé historique détaillé des mouvements mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagrégé.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie III de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices des différences des prix de détail entre les villes.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contient les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthodologie des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 à 6 fournit des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

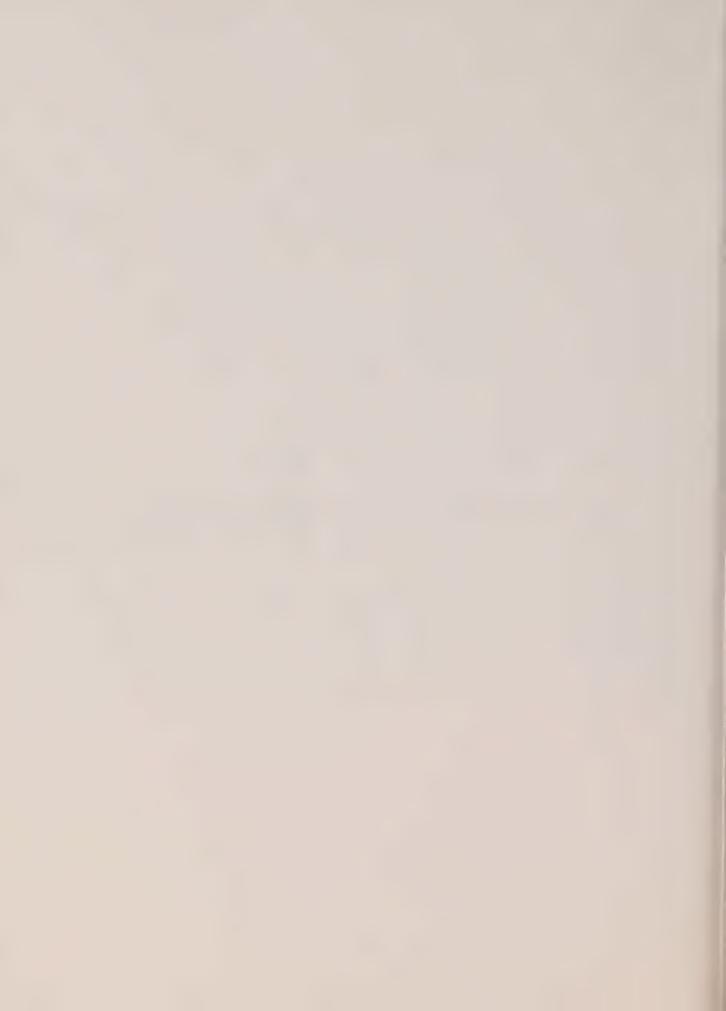

Part I

Current Consumer Price Indexes

Partie I

Indices des prix à la consommation courants

### Canada

The All-items Consumer Price Index for Canada (1971=100) increased by 0.7% from a level of 186.6 in March to 187.9 in April. As a result, the 12-month rise between April 1978 and April 1979 stood at 9.8%, up from the 9.2% registered in the previous 12-month period. Higher Food prices and increased Housing and Transportation charges were largely responsible for the overall monthly rise in the CPI. Food prices advanced by 1.0% between March and April, down from the increases of 2.5% observed in each of the previous two months. The All-items excluding Food index rose by 0.6%, down from the 0.8% registered in the previous month.

Higher prices for selected beef cuts and fresh fruit, up on average 2.0% and 4.1% respectively in early April were largely responsible for the 1.0% increase in the Food at Home index. Other notable contributors to this monthly rise included higher prices for selected cereal and bakery products, chocolate bars, other meat products and poultry. Fresh vegetable prices, on average, declined as did prices for selected pork cuts and coffee. The 1.0% increase in the Food at Home index in April brought this index to a level 17.8% above its April 1978 level. The Food away from Home index rose by 0.9% in April resulting in an increase of 12.3% over its level in April 1978.

Higher prices for new cars, as well as increased automobile operation and maintenance charges were contributing factors to the 0.6% increase in the All-items excluding Food index. Other notable factors included increased shelter charges for both rented and owned accommodation, higher prices for household furnishings reflecting in part the re-imposition of the retail sales tax in the province of Québec, and higher postal rates. Increases were also registered for selected clothing items and in several provinces, for tobacco and alcohol products. Exerting a dampening impact on the overall monthly rise were declines in selected air fares and, in the province of British Columbia, the reduction in the provincial retail sales tax. Between April 1978 and April 1979, the index for All-items excluding Food advanced by 7.5%, up from the 6.5% registered in the previous 12-month period. Part of this acceleration in the rate of growth was attributable to the impact of the varying provincial sales tax reductions which affected the April 1978 index level.

Viewed in terms of goods and services, the price level for goods, including food, advanced by 0.8% in this month while that for services increased by 0.4%. As a result, between April 1978 and April 1979, the price level for goods advanced by 11.9% while that for services rose by 6.3%.

On a seasonally-adjusted basis, the All-items Consumer Price Index advanced by 0.8% between March and April; this comprised a 1.2% increase in the Food index and a 0.6% increase in the All-items excluding Food index.

# City Highlights

Between March and April, consumer prices rose in all 15 cities for which CPI's are produced. Advances ranged from a 0.3% registered in Vancouver to 1.0% observed in both St. John's and Winnipeg. Factors contributing to the differing rates of increases among cities were the general reduction in provincial sales tax in British Columbia, the re-imposition of the provincial sales tax on furniture in the province of Québec, varying rates of price movement for food and new cars and an increase in the price of alcoholic beverages in Manitoba.

# **AVRIL 1979**

### Canada

L'indice d'ensemble des prix à la consommation pour le Canada (1971=100) a augmenté de 0.7 %, passant de 186.6 en mars à 187.9 en avril. En conséquence, la progression d'avril 1978 à avril 1979 se chiffre à 9.8 %, en hausse sur celle de 9.2 % enregistrée sur 12 mois en mars 1979. Les aliments et les frais de transport et d'habitation ont été les grands responsables de l'accroissement global de l'IPC au cours du mois. Les prix des aliments ont monté de 1.0 %, en baisse par rapport aux augmentations de 2.5 % observées au cours des deux mois précédents. L'indice d'ensemble sans les aliments a grimpé de 0.6 %, ce qui représente une diminution par rapport au chiffre de 0.8 % enregistré le mois précédent.

Le renchérissement de certains morceaux de boeuf et des fruits frais, qui a respectivement atteint 2.0 % et 4.1 % en moyenne au début d'avril, est le principal responsable de la montée de 1.0 % de l'indice des aliments consommés à la maison. Parmi les autres facteurs importants, signalons certains produits céréaliers et de boulangerie, les tablettes de chocolat, les autres viandes et la volaille. Les prix des légumes frais, de certains morceaux de porc et du café ont fléchi, en moyenne. Avec cette hausse de 1.0 % en avril, l'indice des aliments consommés à la maison a grimpé de 17.8 % par rapport à avril 1978. L'indice des aliments consommés à l'extérieur a progressé de 0.9 % en avril entrafnant une augmentation de 12.3 % par rapport à avril 1978.

L'augmentation des prix des voitures neuves et celles des frais d'utilisation et d'entretien d'automobiles ont contribué à la poussée de 0.6 % de l'indice d'ensemble sans les aliments. Les frais de logement en location et en propriété, les prix des articles d'ameublement (en partie à cause du rétablissement de la taxe de vente au détail dans la province de Québec) et le tarif postal ont connu des hausses non négligeables. On a également observé le renchérissement de certains articles d'habillement et, dans plusieurs provinces, des produits du tabac et des boissons alcoolisées. En revanche, la progression globale de l'indice a été modérée par la diminution de certains tarifs aériens et, en Colombie-Britannique, par la réduction de la taxe provinciale de vente au détail. Sur 12 mois, l'indice d'ensemble sans les aliments a grimpé de 7.5 % en avril, contre 6.5 % en mars. L'accélération du taux de croissance est partiellement imputable à l'incidence des diverses réductions des taxes provinciales de vente qui ont touché le niveau de l'indice d'avril 1978.

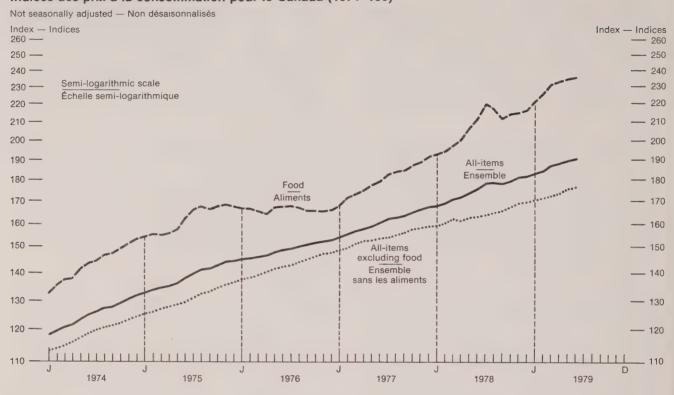

Du point de vue des biens et des services, les prix des biens, y compris les aliments, ont monté de 0.8 % au cours du mois, tandis que ceux des services ont progressé de 0.4 %. Le niveau des prix s'est donc élevé de 11.9 % pour les biens et de 6.3 % pour les services entre avril 1978 et avril 1979

Après désaisonnalisation, l'indice d'ensemble des prix à la consommation a grimpé de 0.8 % entre mars et avril; cette montée résulte d'une augmentation de 1.2 % de l'indice des aliments et de 0.6 % de l'indice d'ensemble sans les aliments.

### Points saillants des indices des villes

Entre mars et avril, les prix à la consommation se sont accrus dans les 15 villes pour lesquelles on produit un IPC. Les hausses se sont échelonnées entre 0.3 % à Vancouver et 1.0 % à St. John's (T.-N.) et à Winnipeg. Si le taux de progression varie d'une ville à l'autre, c'est notamment à cause de la réduction générale de la taxe de vente au détail en Colombie-Britannique, du rétablissement de la taxe de vente sur les meubles au Québec, du mouvement variable des prix des aliments et des voitures neuves et du renchérissement des boissons alcoolisées au Manitoba.

Percentage Change in the Consumer Price Index from the Same Month a Year Ago

Taux de variation de l'indice des prix à la consommation au mois correspondant l'année précédente

### Canada

The All-items Consumer Price Index for Canada (1971=100) increased by 1.0% from a level of 187.9 in April to 189.7 in May. As a result, the 12-month rise between May 1978 and May 1979 stood at 9.3%, down from the 9.8% registered in the previous 12-month period. Higher Transportation charges, and increased Tobacco and Alcohol prices were the most significant factors in the overall monthly CPI rise, having been responsible for about one half of the increase. As a result, the index for All-items excluding Food advanced by 1.1%, up from the 0.6% observed in the previous month. Food prices continued to show some moderation as an advance of 0.6% was recorded, down from the 1.0% registered in the previous month.

The 0.6% increase in the Food index was largely attributable to higher prices for restaurant meals. The Food Away from Home index rose by 1.5% in May, resulting in an increase of 13.3% over its level in May 1978. Higher prices for dairy products, primarily reflecting increased milk prices in the provinces of Ontario, Alberta and British Columbia, and increased prices for fresh fruit were largely responsible for the 0.3% increase in the Food at Home index. Dampening the impact of these increases, were lower prices for selected fresh vegetables and for most beef and pork cuts. The current monthly increase in the Food at Home index brought this index to a level 13.7% above its May 1978 level.

Higher air fares, reflecting increased seasonal rates on selected flights and the ending of promotional sales, along with increased prices for alcohol consumed at home in all provinces except Alberta, were largely responsible for the 1.1% increase in the All-items excluding Food index. Other notable contributing factors included higher prices for seasonal recreational equipment, new cars and increased shelter charges for both rented and owned accommodation. Price increases were also registered for selected clothing items and services. Between May 1978 and May 1979, the index for All-items excluding Food advanced 8.0%, up from the 7.5% registered in the previous 12-month period.

Viewed in terms of goods and services, the price level for goods, including food, advanced by 0.9% in this month, while that for services increased by 1.2%. As a result, between May 1978 and May 1979, the price level for goods advanced by 10.8% while that for services rose by 7.1%.

On a seasonally-adjusted basis, the All-items Consumer Price Index advanced by 0.7% between April and May; this comprised a 0.2% decrease in the Food index and 1.0% increase in the All-items excluding Food index.

### City Highlights

Between April and May, consumer prices rose in all 15 cities for which CPI's are produced. Advances ranged from a 0.6% registered in Edmonton to 1.3% observed in Winnipeg. In nine of the 15 cities, consumer prices rose by 1.0% or more. Factors contributing to the differing rates of increases among cities were the varying rates of price movement for food and alcohol. In addition, all cities registered significant increases in air-fares.

# **MAI 1979**

### Canada

L'indice d'ensemble des prix à la consommation pour le Canada (1971=100) a augmenté de 1.0 %, passant de 187.9 en avril à 189.7 en mai. En conséquence, la progression de mai 1978 à mai 1979 se chiffre à 9.3 %, en baisse par rapport à celle de 9.8 % enregistrée sur 12 mois en avril 1979. Les frais de transport, ainsi que les prix du tabac et des boissons alcoolisées, ont été les grands responsables de l'accroissement global de l'IPC au cours du mois considéré, intervenant pour près de la moitié de cette hausse. L'indice d'ensemble sans les aliments a grimpé de 1.1 %, contre 0.6 % le mois précédent. La montée des prix des aliments ralentit toujours; l'augmentation de 0.6 % est inférieure à celle de 1.0 % enregistrée en avril.

L'augmentation de 0.6 % de l'indice des aliments est principalement attribuable à la hausse des prix des repas pris à l'extérieur. L'indice des aliments consommés à l'extérieur a crû de 1.5 % en mai, ce qui représente une augmentation de 13.3 % par rapport à mai 1978. Le renchérissement des produits laitiers, attribuable en grande partie à la majoration des prix du lait en Ontario, en Alberta et en Colombie-Britannique, et la montée des prix des fruits frais se sont répercutés par la hausse de 0.3 % de l'indice des aliments consommés à la maison. Leur effet a été atténué par la baisse des prix de certains légumes frais et de la plupart des morceaux de boeuf et de porc. Par suite de cette dernière hausse mensuelle, l'indice des aliments consommés à la maison a dépassé de 13.7 % son niveau atteint en mai 1978.

La hausse des tarifs aériens, dûe à la majoration saisonnière des billets pour certains vols et à la fin des ventes promotionnelles, et la majoration des prix des boissons alcoolisées consommées à la maison dans toutes les provinces, sauf l'Alberta, sont les grands responsables de la montée de 1.1 % de l'indice d'ensemble sans les aliments. Les prix du matériel récréatif saisonnier et des voitures neuves et les frais de logement tant en propriété qu'en location ont également connu des hausses non négligeables. Les prix de certains articles d'habillement et des services connexes ont aussi augmenté. Entre mai 1978 et mai 1979, l'indice d'ensemble sans les aliments a progressé de 8.0 %, en hausse sur celle de 7.5 % enregistrée pour la période allant d'avril 1978 à avril 1979.

Du point de vue des biens et des services, les prix des biens, y compris les aliments, ont monté de 0.9 % au cours du mois, tandis que ceux des services ont progressé de 1.2 %. Le niveau des prix s'est donc élevé de 10.8 % pour les biens et de 7.1 % pour les services de mai 1978 à mai 1979.

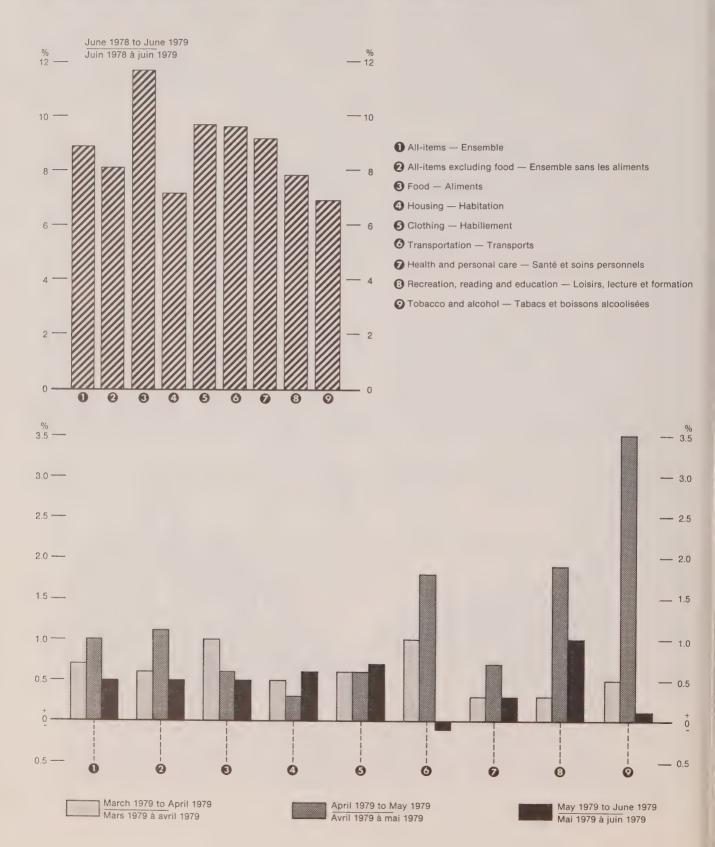

Après désaisonnalisation, l'indice d'ensemble des prix à la consommation a grimpé de  $0.7\,\%$  entre avril et mai; cette montée résulte d'une diminution de  $0.2\,\%$  de l'indice des aliments et d'une augmentation de  $1.0\,\%$  de l'indice d'ensemble sans les aliments.

# Points saillants des indices des villes

Entre avril et mai, les prix à la consommation se sont accrus dans les 15 villes pour lesquelles on produit un IPC. Les hausses se sont échelonnées entre 0.6 % à Edmonton et 1.3 % à Winnipeg. Les prix à la consommation ont progressé de 1.0 % ou plus dans neuf des 15 villes. La variation des augmentations d'une ville à l'autre s'explique principalement par les mouvements inégaux des prix des aliments et des boissons alcoolisées. En plus, toutes les villes ont enregistrées une hausse significative pour les tarifs aériens.

Percentage Change in the Consumer Price Index and its Major Components

Taux de variation de l'indice des prix à la consommation et de ses principales composantes

### Canada

The All-items Consumer Price Index for Canada (1971=100) increased by 0.5% from a level of 189.7 in May to 190.6 in June. As a result, the 12-month rise between June 1978 and June 1979 stood at 8.9%, down from the 9.3% registered in the previous 12-month period. Higher Housing charges and increased Food prices, especially for food consumed away from home, were the most significant factors in the overall monthly CPI rise, having been responsible for about two thirds of the increase. The All-items excluding Food index advanced by 0.5%, down from the 1.1% observed in the previous month. The Food index also increased by 0.5%, down slightly from the 0.6% registered in the previous month.

The 0.5% increase in the Food index was largely attributable to higher prices for restaurant meals. The Food Away from Home index rose by 1.8% in June, resulting in an increase of 14.3% over its level in June 1978. The Food at Home index, however, continued to show some moderation as an increase of 0.2% was recorded, down from the 0.3% registered in the previous month. Higher prices for most fresh fruit and vegetable items, along with increased prices for soft drinks and selected dairy products were largely responsible for the increase in this index. Dampening the impact of these increases were lower prices for beef cuts, down 4.7% on average in early June. The current monthly increase in the Food at Home index brought this index to a level 11.4% above its June 1978 level.

Higher shelter and household operation charges along with increased prices for furniture and household textiles were largely responsible for the 0.5% increase in the All-items excluding Food index. Other notable contributing factors included higher prices for selected clothing items, especially for women's and men's accessories and footwear, along with increased prices for seasonal recreational equipment items. Price declines were registered for selected imported new cars and in several cities for gasoline. Between June 1978 and June 1979, the index for All-items excluding Food advanced 8.1%, up marginally from the 8.0% registered in the previous 12-month period.

Viewed in terms of goods and services, the price level for goods, including food, advanced by 0.4% in this month, while that for services increased by 0.6%. As a result, between June 1978 and June 1979, the price level for goods advanced by 9.9% while that for services rose by 7.3%.

On a seasonally-adjusted basis, the All-items Consumer Price Index advanced by 0.3% between May and June; this comprised a 0.3% decrease in the Food index and a 0.5% increase in the Allitems excluding Food index.

# City Highlights

Between May and June, consumer prices rose in all cities for which CPI's are produced with the exception of Montréal where a decline of 0.1% was registered. Among the other 14 cities, advances ranged from 0.1% in Québec City to 1.0% in Thunder Bay. The varying rates of price movement for food, especially those for beef, largely accounted for the differing rates of overall price change among cities. Beef prices decreased in nine cities, with the declines being most pronounced in Montréal, Ottawa and Québec City. Other contributing factors affecting city movements included price increases for milk in Charlottetown/Summerside and Winnipeg and higher domestic gas and electricity charges in Regina and Saskatoon.

## **JUIN 1979**

### Canada

L'indice d'ensemble des prix à la consommation pour le Canada (1971=100) a augmenté de 0.5 %, passant de 189.7 en mai à 190.6 en juin. En conséquence, la hausse sur 12 mois, soit de juin 1978 à juin 1979, se chiffre à 8.9 %, contre 9.3 % pour la période allant de mai 1978 à mai 1979. Les frais d'habitation et les prix des aliments, surtout des aliments consommés à l'extérieur, sont les principaux responsables, car ils sont intervenus pour environ les deux tiers de la progression globale de l'IPC au cours du mois observé. L'indice d'ensemble sans les aliments a augmenté de 0.5 %, en baisse par rapport au chiffre de 1.1 % observé le mois précédent. L'indice du prix des aliments a également progressé de 0.5 %, ce qui est légèrement inférieur au chiffre de 0.6 % enregistré en mai 1979.

La hausse de 0.5 % de l'indice du prix des aliments est attribuable dans une large mesure à la progression des prix des repas pris au restaurant. L'indice du prix des aliments consommés à l'extérieur s'est élevé de 1.8 % en juin, en hausse de 14.3 % sur juin 1978. L'indice des prix des aliments consommés à la maison a toutefois continué à progresser à un rythme modéré, augmentant de 0.2 %, ce qui est inférieur au chiffre de 0.3 % observé le mois précédent. Le renchérissement de la plupart des fruits et légumes frais, des boissons gazeuses et de certains produits laitiers est le principal responsable de la montée de l'indice. Le fléchissement des prix des coupes de boeuf, de 4.7 % en moyenne au début de juin, a cependant atténué l'effet de ces hausses. Étant donné l'augmentation observée au cours de juin, l'indice du prix des aliments consommés à la maison a grimpé de 11.4 % par rapport au niveau atteint en juin 1978.

Les frais de logement, les dépenses de ménage et les prix des meubles et des textiles sont les principaux responsables de la progression de  $0.5\,\%$  de l'indice d'ensemble sans les aliments. Parmi les autres facteurs importants, signalons certains articles d'habillement, surtout les accessoires et chaussures pour femmes et pour hommes, et le matériel de loisirs saisonniers. Des baisses de prix ont été observées pour certaines voitures neuves importées et, dans plusieurs villes, pour l'essence. De juin 1978 à juin 1979, l'indice d'ensemble sans les aliments a augmenté de  $8.1\,\%$ , ce qui est à peine supérieur au chiffre de  $8.0\,\%$  observée de mai 1978 à mai 1979.

Du point de vue des biens et services, les prix des biens, y compris les aliments, ont monté de  $0.4\,\%$  au cours du mois, tandis que ceux des services ont progressé de  $0.6\,\%$ . Le niveau des prix s'est donc élevé de  $9.9\,\%$  pour les biens et de  $7.3\,\%$  pour les services de juin  $1978\,$  à juin  $1979\,$ 

Après désaisonnalisation, l'indice d'ensemble des prix à la consommation a progressé de  $0.3\,\%$  de mai à juin, sous l'effet d'une baisse de  $0.3\,\%$  de l'indice des prix des aliments et d'une augmentation de  $0.5\,\%$  de l'indice d'ensemble sans les aliments.

### Points saillants des indices des villes

De mai à juin, les prix à la consommation ont augmenté dans toutes les villes pour lesquelles on produit un IPC, à l'exception de Montréal où l'on a observé un fléchissement de 0.1 %. En ce qui concerne les 14 autres villes, la hausse s'échelonne de 0.1 % à Québec à 1.0 % à Thunder Bay. Les aliments, surtout le boeuf, sont les principaux responsables de la variation des mouvements des prix entre les villes. Les prix du boeuf ont diminué dans neuf villes, particulièrement à Montréal, à Ottawa et à Québec. D'autres facteurs importants sont le renchérissement du lait à Charlottetown/Summerside et à Winnipeg et la majoration des frais de gaz et d'électricité de consommation ménagère à Regina et à Saskatoon.

# April, May and June in Retrospect

The All-items Consumer Price Index for Canada (1971=100) advanced 2.1% in the second quarter of 1979, rising from a level of 186.6 in March to 190.6 in June. This latest increase compares with a rise of 2.5% in the corresponding second quarter of 1978.

Higher Housing charges, up 1.4% in the second quarter, accompanied by higher Food prices, up 2.0%, and increased Transportation costs, up 2.8%, together accounted for more than two thirds of the 2.1% increase in the All-items index. A substantial part of the rise in the Food index was due to a 4.2% increase over the quarter in food away from home prices. Other contributing factors to the increase in the Food index included price increases for fresh fruit, selected dairy and bakery products, chocolate bars and some meat products. These increases were partially offset by lower prices for beef, pork and selected fresh vegetables. The latest quarterly rise in the Food index represented a considerable moderation from the 7.2% increase registered in the corresponding period of 1978.

The All-items excluding Food index rose 2.1% in the second quarter of 1979 compared to the increase of 0.6% the second quarter 1978. The increase in the latest quarter was attributable largely to higher shelter charges, mainly for owned accommodation, and higher prices for new passenger cars, air fares, alcoholic beverages for home consumption and seasonal recreation equipment items. Higher prices were also registered for selected clothing items, furniture, gasoline, fuel oil, cigarettes and for postal rates.

In the 12-month period June 1978 to June 1979, the All-items CPI rose 8.9% reflecting an 11.7% rise in the Food index and an 8.1% increase in the All-items excluding Food index. These latest advances correspond with 12-month increases ending June 1978 of 9.2% in the All-items index, 17.9% in the Food index and 5.9% in the All-items excluding Food index.

# Avril, mai et juin en rétrospective

L'indice d'ensemble des prix à la consommation pour le Canada (1971=100) a progressé de 2.1 % au cours du second trimestre de 1979, passant de 186.6 en mars à 190.6 en juin. Cette hausse se compare à celle de 2.5 % enregistrée au cours du second trimestre de 1978.

La hausse des frais d'habitation, qui était de  $1.4\,\%$  au cours du deuxième trimestre, combinée à l'augmentation des prix des aliments (+  $2.0\,\%$ ) et à la progression des frais de transport (+  $2.8\,\%$ ) ont été responsables pour plus des deux tiers de la progression de  $2.1\,\%$  de l'indice d'ensemble. Une partie importante de la hausse de l'indice des aliments a été attribuable à la progression de  $4.2\,\%$  des prix des aliments consommés à l'extérieur. Les fruits frais, certains produits laitiers et de boulangerie, les tablettes de chocolat et certaines viandes ont également contribué à la hausse de l'indice des aliments. Ces hausses ont été, en partie, compensées par la baisse des prix du boeuf, du porc et de certains légumes frais. Cette dernière progression trimestrielle de l'indice des aliments est beaucoup plus modérée que celle de  $7.2\,\%$  enregistrée au cours de la même période en 1978.

L'indice d'ensemble sans les aliments a progressé de 2.1 % au cours du second trimestre de 1979, comparativement à une hausse de 0.6 % au cours du second trimestre de 1978. Cette augmentation du dernier trimestre a été imputable, en grande partie, à la progression des frais de logement, surtout le logement en propriété, et l'augmentation des prix des nouvelles voitures, des billets d'avion, des boissons alcoolisées consommées à la maison et des articles récréatifs saisonniers. Des hausses de prix ont également été enregistrées pour certains articles d'habillement, pour les meubles, l'essence, le mazout, les cigarettes et les frais postaux.

Au cours de la période de 12 mois couvrant juin 1978 à juin 1979, l'IPC d'ensemble a progressé de 8.9 %, comprenant une hausse de 11.7 % de l'indice des aliments et de 8.1 % de l'indice d'ensemble sans les aliments. Ces dernières hausses correspondent à celles enregistrées au cours de la période de 12 mois se terminant en juin 1978 alors que l'indice d'ensemble, l'indice des aliments et l'indice d'ensemble sans les aliments avaient progressé de 9.2 %, de 17.9 % et de 5.9 % respectivement.

For some elaboration of methodology, see Appendix 1. – Pour de plus amples détails sur la méthodologie, consulter appendice 1.

For an explanation of the non-availability of data previous to October 1978, see Appendix 3, Section B(2). – Une explication de l'absence de données pour la période précédant octobre 1978 set trouve à la section B(2) de l'appendice 3.

Seasonally adjusted data are revised annually using updated seasonal adjustment factors. For more information, refer to Appendix 3. Les données désaisonnalisées sont revisees annuellement afin d'introduire des facteurs de désaisonnalisation plus récents. Pour de plus amples renseignements, voir appendice 3.

As of October 1978 indexes are based on 1974 expenditure weights and are linked to their predecessor at September 1978. For further explanation see "Notes on the Consumer Price Index", Appendix 1. — A partir d'octobre 1978 les indices sont calculés à l'aide des pondérations fondées sur les dépenses de 1974 et sont raccordés aux indices précédents en septembre 1978. Pour de plus amples renseignements voir les "Notes sur l'indice des prix à la consommation" Appendice 1.
1974=100
Reconstructed series. — Séries reconstruites.
Includes gasoline, motor oil, domestic gas, fuel oil and electricity. — Comprend l'essence, l'huile à moteur, le gaz domestique, le mazout et l'électricité. (1)

The Consumer Price Index for All-items and seven major components by cities have been revised with the release of data for October 1978 to correct for methodological differences in the construction of the Canada and city series. For further details see, The Consumer Price Index, Revision based on 1974 Expenditures Concepts and Procedures, (occasional) Catalogue 62:546, — L'indice d'ensemble des prix à la consommation et ses sept composantes principales par ville, ont été révisés avec l'émission d'octobre 1978 afin de tenir compte des différences méthodologiques qui existateint pour la construction des séries du Canada et des villes. Pour de plus amples informations voir, l'Indice des prix à la consommation, révision fondée sur les depenses de 1974 concepts et procédés (hors-série) no. 62-546 au catalogue.

These indexes measure the percentage change in consumer prices within each city, from the base year to each subsequent time period. They do not compare price levels between cities; for inter-city indexes of retail prices differentials, refer to Appendix 5 of this publication. — Ces indices measurent la variation en pourcentage des prix à la consommation dans chaque ville par rapport à l'année de base. Ils ne comparent pas les niveaux des prix d'une ville à l'autre; pour les indices comparatifs des prix de détail, se reporter à l'appendice 5 de cette publication.

1974 = 100

For explanatory notes and detailed item specifications see Appendix 4. In some cases, blanks appear in this table where the quality and (or) quantity of the prices were insufficient to produce a good average. In other cases, the price volatility of certain items and the methodology for calculating updated average prices do not permit their publication. See Section 4 of Appendix 4 for further explanation. Converted from one quart to one litre for most cities of the province of Ontario. Saint John (N.B.), Halifax, Regina, Saskatoon, Edmonton, Calgary (20 ounces). St. John's (Nfld.), Montréal, Ottawa, Toronto, Thunder Bay, Winnipeg, Vancouver (24 ounces). Québec City (32 ounces). (3) (4)

Pour de plus amples renseignements et détails sur les spécifications des articles consulter l'appendice 4.
Nous avons laissé les espaces en blanc dans ce tableau lorsque la qualité et (ou) la quantité des prix relevés ne nous a pas permis d'établir des moyennes fiables et, dans d'autres cas, lorsque l'instabilité des prix des articles et la méthodologie pour mettre à jour les moyennes de prix ne nous permettaient pas de les publier. Voir la section 4 de l'appendice 4 pour une explication additionnelle.
Le prix d'une pinte converti à un litre dans la plupart des villes de l'Ontario.
Saint John (N.-B.), Halifax, Regina, Saskatoon, Edmonton, Calgary (20 onces), St. John's (T.-N.), Montréal, Ottawa, Toronto, Thunder Bay, Winnipeg, Vancouver (24 onces), Québec (32 onces).

## Appendix 1

#### THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to price movements.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the movement of prices in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of grocery items are published separately in Appendix 3, Section C.

## Coverage

Beginning with October 1978, the weights used in the Consumer Price Index are those pertaining to 1974 expenditure patterns. Data used for establishing these patterns were obtained through the 1974 Family Expenditure Surveys. The expenditures are those reported by all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. The 1971 Census of Canada revealed 59 such urban centres.

Separate CPI's are published for 15 of these centres which, together, accounted for approximately 70% of the total 1974 current consumption expenditures reported in the 59 centres. These 15 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 400 commodities are priced in each of these 15 cities while in the remaining 44 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

#### Prices

The prices used in the calculation of the CPI are retail prices inclusive of all sales, excise and other

## Appendice 1

#### L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement du mouvement des prix.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le mouvement des prix dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles d'épicerie sont publiées à part dans l'appendice 3, section C.

#### Champ d'observation

À compter d'octobre 1978, les pondérations utilisées pour l'indice des prix à la consommation se rapportent aux schémas des dépenses de 1974. Les données qui ont servi à établir ces schémas proviennent des Enquêtes sur les dépenses des familles de 1974. Les dépenses sont celles qu'ont déclarées tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. Selon le recensement du Canada de 1971, ces centres urbains sont au nombre de 59.

Des IPC distincts sont publiés pour 15 centres qui, ensemble, interviennent pour près de 70 % du total des dépenses courantes de consommation déclarées en 1974 par les 59 centres. Les 15 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 400 produits dans chacune des 15 villes; ce nombre est plus faible dans les 44 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

#### Prix

Les prix servant au calcul de l'IPC sont les prix au détail et englobent toutes les taxes de vente, d'accise et autres taxes

taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected in judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

## Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically revised. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods. For the period April 1973 to September 1978, the 1967 family expenditure patterns (and within the food component, the 1969 detailed spending patterns) were used, while for October 1978 forward, the indexes are based on the 1974 expenditure patterns.

#### Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont révisées périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes. Entre avril 1973 et septembre 1978, les habitudes des dépenses des familles de 1967 ont servi à établir les pondérations (les pondérations internes de la composante alimentation, sont basées sur les habitudes des dépenses détaillées de 1969) tandis qu'à partir d'octobre 1978, l'indice est calculé d'après les habitudes des dépenses de 1974.

TEXT TABLE I. Comparison of 1967 and 1974 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF I. Comparaison des pondérations des dépenses de 1967 et de 1974 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

<sup>1</sup> Figures may not add up due to rounding.

<sup>1</sup> Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

These weights represent expenditures in 1974 (1974 quantities valued in 1974 prices) and in 1967 (1967 quantities valued in 1967 prices). They cannot be used to reconstruct or reaggregate indexes on a 1971=100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the address shown below.

The indexes based on 1974 weights were linked or connected in September 1978 to the appropriate indexes based on 1967 weights which had been in use since May 1973. This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level of an aggregate index to fall slightly outside the range of its component indexes.

#### Time Base

The Consumer Price Index for Canada and each index city is expressed in terms of 1971=100, except for Charlottetown - Summerside and for certain items, as noted, where the pricing survey was introduced in more recent years.

## **Current Annual Rate of Change**

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 3 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level and raising it to an annual rate (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", Retail Prices and Living Costs — Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

#### Reconstructed Indexes

With the release of the October 1978 Consumer Price Index, certain series were reconstructed historically to reflect more closely the Standard Commodity Classification system and the Family Expenditure categories of Statistics Canada. For further details see The Consumer Price Index Revision Based on 1974 Expenditures, Concepts and Procedures (Occasional) Catalogue 62-546.

#### **Revised City Indexes**

With the release of the October 1978 Consumer Price Index, certain city indexes were revised historically to correct for methodological differences which Ces pondérations représentent les dépenses en 1974 (quantités et prix de 1974) et en 1967 (quantités et prix de 1967). Elles ne peuvent servir à reconstituer ni à composer des indices sur la base de 1971=100. La méthode à suivre pour une telle reconstitution peut être obtenue sur demande auprès de la section dont l'adresse est donnée plus loin.

Les indices fondés sur les pondérations de 1974 ont été enchaînés ou raccordés en septembre 1978 aux indices correspondants fondés sur les pondérations de 1967, en usage depuis mai 1973. Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, l'indice composé pourrait ainsi dépasser légèrement l'étendue des indices de ces composantes.

#### Période de base

L'indice des prix à la consommation du Canada et de chaque ville est exprimé sur la base de 1971=100, sauf pour Charlottetown-Summerside et pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduit qu'au cours des années plus récentes.

#### Taux de variation annuel courant

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 3 consiste à prendre un taux de croissance composé sur le niveau désaisonnalisé des trois derniers mois et à le porter à un taux annuel (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", *Prix de détail et coût de la vie* — Bulletin de service (nº 62-005 au catalogue) vol. 4, nº 4, avril 1975.

#### Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation d'octobre 1978, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent plus fidèlement le système de la Classification type des produits et les catégories des Dépenses des Familles établis par Statistique Canada. Pour de plus amples informations voir L'Indice des prix à la consommation, Révision fondée sur les dépenses de 1974, Concepts et Procédés (hors-série), nº 62-546 au catalogue.

## Revision des indices des villes

Avec l'émission de l'Indice des prix à la consommation d'octobre 1978, certains indices historiques des villes ont été reconstruits pour tenir compte des différences previously existed in the construction of these indexes at the Canada and city levels. For further details see *The Consumer Price Index Revision Based on 1974 Expenditures, Concepts and Procedures* (Occasional) Catalogue 62 - 546.

# Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in *The Consumer Price Index Revision Based on 1974 Expenditures, Concepts and Procedures* (Occasional), Catalogue 62-546. Information regarding the Family Expenditure Survey is contained in the *Urban Family Food Expenditure Survey, 1974*, Catalogue 62-542, and *Urban Family Expenditure Survey, 1974*, Catalogue 62-544.

méthodologiques qui existaient au niveau de la construction de ces indices entre le Canada et les villes. Pour de plus amples informations voir *L'Indice des prix, révision fondée sur les dépenses de 1974, Concepts et Procédés* (hors-série), nº 62-546 au catalogue.

# Renseignements supplémentaires et publications connexes

L'Indice des prix à la consommation – Révision fondée sur les dépenses de 1974, Concepts et Procédés (hors-série), n° 62-546 au catalogue, décrit en détail les méthodes et concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se trouvent dans Dépenses alimentaires des familles urbaines, 1974, n° 62-542 au catalogue, et Dépenses des familles urbaines, 1974, n° 62-544 au catalogue.

## Appendix 2

# THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1975, compared with their average level in 1971, consumer prices as measured by the CPI were 32.4% higher, so that an equivalent basket of goods and services which could be purchased for \$100 in 1971 would cost the consumer \$132.40 in January 1975. Each consumer dollar in January 1975, therefore, buys less than in 1971 and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1975 the purchasing power of the 1971 consumer dollar declined to approximately 76 cents (\$1.00 x 100.00/132.4 = \$0.76).

Users of the tabulation which shows the purchasing power of the 1971 consumer dollar at different points in time (Table 5) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the CPI relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the CPI, it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

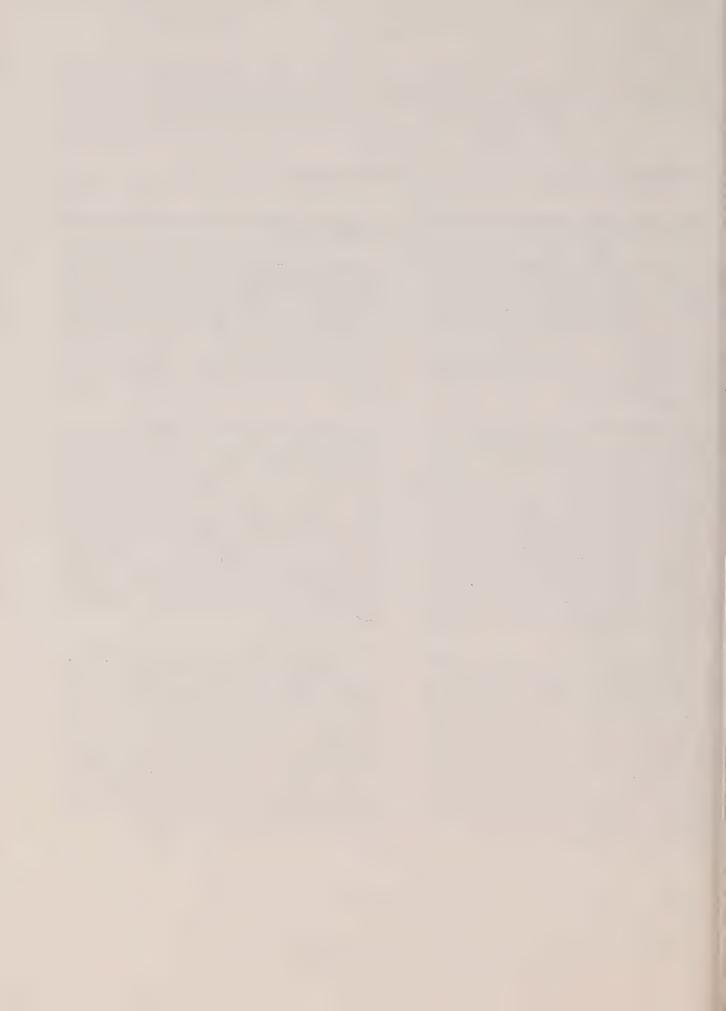

## Appendice 2

# LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1975, par rapport au niveau de 1971, les prix à la consommation mesurés par l'IPC avaient progressé de 32.4 %, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1971 aurait coûté \$132.40 en janvier 1975 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1975 achète moins qu'en 1971 et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1975, le pouvoir d'achat du dollar de consommation de 1971 était tombé approximativement à 76 cents (\$1.00 x 100.00/132.4 = \$0.76).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1971 à différentes périodes (tableau 5) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'IPC pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence different sensiblement. Il faut également noter que, tout comme l'IPC il n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

## Appendix 3

# SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences, social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then returns to its original level. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement in one direction over a long period. It reflects continuing rather than changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the subject. Rather than reiterating those texts, an outline of the methodology employed by

## Appendice 3

## LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, puis revient à son niveau initial. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable orienté dans une même direction sur une longue période. Elle reflète la continuité de l'économie plutôt que l'évolution des facteurs économiques.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la question<sup>1</sup>. Au lieu d'en reprendre ici le contenu, nous présentons cidessous les grandes lignes de la méthode utilisée à Statistique

Statistics Canada — U.S. Bureau of Census X-11 Seasonal Adjustment Program (Variant II) is provided below, followed by a description of its application to the CPI.

#### Section A

# 1. Outline Explanation of the X-11 Seasonal Adjustment Program

The X-11 Seasonal Adjustment Program is based on a ratio-to-moving-average methodology.

The first step in the ratio-to-moving-average method is to compute a centered 12-term moving average (a 2-term average of a 12-term moving average). This average eliminates a stable seasonal pattern and irregular fluctuations and reproduces exactly a linear trend. The raw data are then divided by this moving average; since both contain the trend-cycle component, division leaves, essentially, only the seasonal and irregular components. Estimates of the seasonal adjustment factors are then obtained by averaging the seasonal-irregular ratios for successive Januaries, Februaries, etc., so that the irregular factor is largely cancelled out by the averaging procedures. Once the seasonal variations are thus roughly identified, they are eliminated from the original observations by dividing these observations by the seasonal adjustment factors, resulting in a series that contains the trend, cycle and irregular factors, but not the seasonal factors.

The X-11 program performs several iterations of this ratio-to-moving-average procedure. Basically, three rounds of calculations are performed by the program. An outline of the first round follows:

The original series are smoothed using a centered 12term moving average to provide a preliminary estimate of the trend-cycle curve. Then, preliminary seasonalirregular ratios, seasonal factors and an irregular component are calculated. Based on the variability in the irregular component, weights are developed for each monthly value to estimate its degree of extremeness. Values outside specified upper limits receive a weight of 0.0 (totally extreme), values inside specified lower limits receive a weight of 1.0 (totally non-extreme) and values between the limits receive weights between 0.0 and 1.0 depending on their degree of extremeness. For values receiving less than full weight, the corresponding seasonal-irregular ratios are replaced with modified ratios and a second set of seasonal factors is computed. Using these factors, a first estimate of the seasonally adjusted series is

Canada, c'est-à-dire, la variante X-11 de la méthode II du *U.S. Bureau of Census* que suivra une description de son application à l'IPC.

#### Section A

# 1. Description sommaire du programme de désaisonnalisation X-11

Le programme X-11 fait appel à la méthode du rapport à la moyenne mobile.

La première étape de cette méthode consiste à calculer une moyenne mobile centrée de 12 termes (une moyenne de 2 termes d'une moyenne mobile de 12 termes). Cette moyenne élimine la tendance saisonnière stable ainsi que les fluctuations accidentelles et reproduit exactement une tendance générale linéaire. Les données brutes sont alors divisées par la moyenne mobile. Étant donné que les deux comportent l'élément tendance-cycle, ce calcul ne laisse essentiellement que les composantes saisonnières et accidentelles. Les estimations des facteurs de désaisonnalisation s'obtiennent ensuite en prenant la moyenne des rapports des composantes saisonnières et accidentelles pour les mois de janvier, les mois de février, etc., des années successives, de sorte que le facteur accidentel est en grande partie éliminé grâce à ces procédés de mise en moyennes. Une fois les variations saisonnières ainsi isolées en gros, elles sont éliminées des observations initiales grâce à la division de ces dernières par les facteurs de désaisonnalisation, ce qui donne une série renfermant la tendance générale, le cycle et les facteurs accidentels, mais non les facteurs saisonniers.

Le programme X-11 exécute plusieurs séries de calculs de ce rapport à la moyenne mobile. Fondamentalement, il y a trois étapes de calcul. On trouvera ci-dessous les grandes lignes de la première étape:

Les séries initiales sont lissées grâce à une moyenne mobile centrée de 12 termes, donnant ainsi une première estimation de la tendance-cycle. On calcule ensuite les ratios préliminaires des éléments saisonniers et accidentels, les facteurs saisonniers ainsi qu'une composante accidentelle. Compte tenu de la variabilité de la composante accidentelle, on établit des coefficients de pondération pour chaque valeur mensuelle afin d'estimer son degré de valeur extrême. Les valeurs se trouvant à l'extérieur de limites supérieures déterminées sont affectées du coefficient 0.0 (valeur extrême totale), les valeurs à l'intérieur de limites inférieures déterminées se voient affecter le coefficient 1.0 (valeur non extréme) et l'on attribue aux valeurs situées entre ces limites des coefficients de pondération compris entre 0.0 et 1.0 selon leur degré de valeur extrême. Quant aux valeurs dont la pondération est sous-représentative, leurs rapports composante saisonnière/ composante accidentelle sont remplacés par des ratios

obtained. Using a weighted Henderson moving average of this estimate of the seasonally adjusted series, a second estimate of the trend-cycle is computed. The steps above are repeated to produce a second estimate of the seasonally adjusted series and a refined estimate of the irregular component. This irregular component is then modified for extreme values and used to develop refined weights for identifying extreme values.

A second round is then performed with essentially the same computations as above, using an original series modified by the irregular weights estimated in the first round. This second round produces final estimates of the irregular weights.

Using an original series modified by the final irregular weights computed in the second round, a third and final round is performed. In this third round, final estimates are produced of the seasonal factors, seasonally adjusted series, trend-cycle and irregular components. Summary measures are computed.

#### 2. Guidelines

The guidelines employed are the standard ones developed and used in Statistics Canada. Their use assists in the judgement of the acceptability of adjusted results when applying the X-11 monthly multiplicative or additive programs. The quality assessment procedure employed exploits the X-11 summary measures (F2 tables) to yield two coefficients: the coefficient of irregularity ( $q_1$ ) and the coefficient of seasonality ( $q_2$ ). The coefficient of irregularity enables one to establish whether or not the series is sufficiently regular to permit adjustment, while the coefficient of seasonality gives the degree and significance of the seasonality present in the time series and thus indicates whether or not there is sufficient seasonality in the series to warrant its adjustment.

According to the guidelines, some of the options of the X-11 were not used, such as the trading day factors and the Easter adjustment, because they apply to "flow" time series. A "flow" can be defined as the rate of economic activity measured over a period of time. The CPI, however, measures prices at specific times during a month and therefore variations in the calendar are not a factor in the calculation of the Index.

Regarding the options for choosing sigma limits for graduating extreme values in estimating seasonal and trend-cycle components, the guidelines recommend that no specific option be applied. This suggestion was followed.

modifiés et l'on calcule un deuxième ensemble de facteurs saisonniers. À partir de ces facteurs, on obtient une première estimation de la série désaisonnalisée. En se servant d'une moyenne mobile pondérée du type Henderson de cette estimation, on calcule une seconde estimation de la tendance-cycle. On passe par les étapes mentionnées plus haut pour obtenir une seconde estimation de la série désaisonnalisée et une estimation plus élaborée de la composante accidentelle. Cette dernière est alors modifée en fonction de ses valeurs extrêmes et utilisée pour déterminer des coefficients de pondération améliorés qui identifieront les valeurs extrêmes.

La seconde phase reproduit essentiellement les mêmes calculs que ci-dessus, à partir d'une série originale modifiée par les coefficients de pondération de la composante accidentelle estimés lors de la première phase. La deuxième phase produit des estimations définitives des coefficients de pondération de la composante accidentelle.

À partir d'une série originale modifée par les coefficients de pondération définitifs de la composante accidentelle calculés lors de la deuxième phase, on procède à un troisième et dernier calcul qui consiste à produire des estimations définitives des facteurs saisonniers, des séries désaisonnalisées, de la tendance-cycle et de la composante accidentelle. On calcule ensuite des mesures récapitulatives.

#### 2. Directives

Les directives utilisées sont les directives normalisées élaborées et appliquées à Statistique Canada. Elles aident à juger de l'acceptabilité des résultats de la désaisonnalisation lorsqu'on utilise les schémas mensuels multiplicatifs ou additifs du programme X-11. La procédure d'évaluation de la qualité utilisée fait appel aux mesures récapitulatives du programme X-11 (tableaux F2) pour donner deux coefficients; le coefficient d'irrégularité  $(\mathbf{q}_1)$  et le coefficient de saisonnalité  $(\mathbf{q}_2)$ . Le premier permet de déterminer si la série est suffisamment régulière pour permettre une désaisonnalisation tandis que le coefficient de saisonnalité donne le degré et l'importance de la saisonnalité dans la série chronologique, indiquant ainsi si la saisonnalité de la série est suffisamment importante pour justifier une désaisonnalisation.

Suivant ces directives, certaines options du programme X-11 n'ont pas été utilisées, comme le facteur jours ouvrables et l'ajustement saisonnier pour Pâques, car elles s'appliquent à des séries chronologiques de "flux". On entend par "flux" le taux de l'activité économique mesuré sur une certaine période. L'IPC cependant mesure les prix à un instant donné du mois. Les variations durant l'année n'interviennent donc pas dans le calcul de l'indice.

Pour ce qui est des options liées au choix des bornes sigma dans le calcul des valeurs extrêmes lors de l'estimation de la saisonnalité et de la tendance-cycle, les directives recommandent de n'utiliser aucune option en particulier, suggestion qui a été suivie. The guidelines also suggest that wider sigma limits be considered only if more than 20% of the irregulars are treated as extremes. This suggestion was not followed due to the small number of irregulars treated as extremes.

For seasonal factor curves it is recommended that no specific option be employed. In the calculation of these curves, the Seasonal-irregular ratios for each month are smoothed by a 3 x 5-term moving average (a 3-term average of a 5-term average) to estimate final seasonal factors. Optionally, one may specify any of the following seasonal factor curves to compute final seasonal factors for any particular month: 3,  $3 \times 3$ ,  $3 \times 5$ ,  $3 \times 9$ , or n-term (where "n" is the number of years of data in a particular month; i.e., a stable seasonal). The choice of the moving average to smooth the Seasonal-irregular ratios depends on the amount of irregularity in the series.

Finally, the guidelines suggest that the appropriate moving average for the variable trend-cycle component be selected. In X-11, the moving average used to estimate the trend-cycle component is selected on the basis of the amplitude of irregular variations in the data relative to the amplitude of long-term systematic variations. A moving average is chosen that provides a suitable compromise between the need to smooth the irregular with a long-term inflexible moving average and the need to accurately reproduce the systematic element with a short-term flexible moving average. For highly irregular or very smooth series, a more appropriate average is chosen. The selection is made on the basis of a preliminary estimate of the I/C ratio (the ratio of the average absolute month-to-month change in the irregular to that in the trend-cycle). This procedure was adopted for the CPI adjustment.

## Section B

### 1. Seasonal Adjustment of the Revised CPI

As indicated in Appendices 1 and 2 the published official series for Canada, unadjusted for seasonal variations, is based on different expenditure weights over time. Subsequent to September 1978, the 1974 expenditure weights are in effect. These weights supersede the 1967 expenditure patterns used between April 1973 and September 1978. Prior to this, the 1957 expenditure patterns were used.

The use of different weighting systems over time necessitates the application of monthly links to a few of the CPI item indexes and to all of the aggregate Les directives recommandent également que l'on ne considère des bornes sigma plus larges que si plus de 20 % des éléments accidentels sont traités comme des extrêmes. Cette recommandation n'a pas été suivie étant donné le petit nombre de tels éléments.

En ce qui concerne les courbes des facteurs saisonniers, il est recommandé de n'employer aucune option en particulier. Dans le calcul de ces courbes, les ratios composante saisonnière/composante accidentelle pour chaque mois sont lissés par la moyenne mobile de 3 x 5 termes (une moyenne de 3 termes d'une moyenne de 5 termes) pour donner les estimations définitives des facteurs saisonniers. On peut, au choix, préciser l'une des courbes de facteurs saisonniers suivantes pour calculer les facteurs saisonniers définitifs d'un mois en particulier: 3, 3 x 3, 3 x 5, 3 x 9 ou n-termes (lorsque "n" est le nombre d'années sur lesquelles portent des données pour un mois en particulier, c.-à-d., lorsqu'il s'agit d'une saisonnalité stable). Le choix de la moyenne mobile destinée au lissage des ratios composante saisonnière/composante accidentelle dépend de l'importance de la composante accidentelle dans la série.

Les directives en question recommendent enfin de choisir la moyenne mobile appropriée pour le calcul de la composante variable tendance-cycle. Dans le programme X-11, la moyenne mobile utilisée pour estimer la composante tendancecycle est choisie en fonction de l'amplitude des variations accidentelles dans le cas des données relatives à l'amplitude des variations systématiques à long terme. On choisit une moyenne mobile qui constitue un compromis acceptable entre la nécessité de lisser la composante accidentelle grâce à une moyenne mobile rigide à long terme et la nécessité de reproduire avec précision la composante systématique grâce à une moyenne mobile souple à court terme. Pour les séries très accidentées ou très stables, on choisit une moyenne plus appropriée. On fait ce choix en fonction d'une première estimation du ratio A/C (ratio de la variation absolue moyenne mensuelle de la composante accidentelle à celle de la tendance-cycle). Cette procédure a été adoptée pour l'ajustement de l'IPC.

#### Section B

## 1. Désaisonnalisation de l'IPC révisé

Tel qu'indiqué aux appendices 1 et 2, les séries publiées officielles du Canada, non désaisonnalisées, sont basées sur des pondérations tirées de dépenses différentes au cours du temps. Les pondérations fondées sur les dépenses de 1974 sont effectives pour la période postérieure à septembre 1978. Ces pondérations remplacent les schémas de dépenses de 1967 qui étaient utilisés entre avril 1973 et septembre 1978. Avant cette période on avait utilisé les schémas de dépenses de 1957.

L'utilisation de différents systèmes de pondération, au cours du temps, implique un raccordement mensuel pour quelques indices de l'IPC au niveau des articles et pour tous

indexes that exist historically as a means of adjusting for the amount of difference in level resulting from the incorporation of different weights. This linking ensures that conceptually equivalent series are made continuous over time.

In the process of seasonally adjusting the CPI, the item series which require adjustment are fed into the X-11 program: the series obtained are then recombined with the rest of the item series, which are unadjusted and unlinked, to obtain seasonally adjusted aggregates. Then the appropriate linking factors are applied, where required, to alter the level of the seasonally adjusted series by the amount of alteration required for the unadjusted series. The decision to produce seasonally adjusted aggregates by summing the appropriate item series (both those that have been seasonally adjusted and those that have not) rather than directly seasonally adjusting the aggregates was taken because the detection of significant seasonality is facilitated by deseasonalizing series at the item level. This is so because item seasonality within an aggregate may be offsetting, obscuring the existence of important seasonality at the item level.

### 2. Historical Seasonally Adjusted CPI Data

The use of different weighting systems presents problems for seasonal adjustment, as the incorporation of different weights can alter seasonal patterns at the aggregate levels. One solution to this problem, the one used for the CPI, is to concentrate the seasonal adjustment process to a time period in which the weighting system remains fixed. In the current Revision, item series were rebased to 1974=100 for purposes of seasonal adjustement and aggregation (see reference paper The Consumer Price Index, Revision Based on 1974 Expenditures - Concepts and Procedures, Catalogue 62-546). However, the official published series for Canada, unadjusted for seasonal variations, incorporates the 1967 expenditure weights for the period May 1973 to September 1978. Thus, although appropriate seasonal adjustment factors were developed through use of unofficial data starting in January 1974, official deseasonalized CPI movements are available only for the period subsequent to September 1978.

### 3. Projected Factors

In general terms, the procedure is to apply the X-11 program to those of the item series which, in accordance with the guidelines, are deemed to be sufficiently seasonal to warrant their deseasonalization. The X-11 program yields, *inter alia*, monthly seasonal factors for a year ahead. The formula to obtain these projected factors is as follows:

 $S_{n+1} = S_n + 1/2$  ( $S_n - S_{n-1}$ ), where "S" is the seasonal factor and "n" is the current period of time.

les indices historiques agrégés de manière à tenir compte, par ajustment, des différences de niveau imputables à l'introduction de pondérations différentes. Ce raccordement nous permet d'assurer la continuité, au cours du temps, de séries conceptuellement équivalentes.

Lors de la désaisonnalisation des IPC, les séries à désaisonnaliser sont introduites dans le programme X-11; les séries ainsi obtenues sont alors recombinées aux autres séries, qui ne sont ni désaisonnalisées, ni raccordées, pour donner des agrégats désaisonnalisés. Les facteurs de raccordement appropriés sont ensuite éventuellement appliqués pour modifier le niveau des séries désaisonnalisées d'une quantité égale au niveau de variation nécessaire pour les séries non désaisonnalisées. On a décidé de produire des séries agrégées désaisonnalisées en prenant la somme des séries appropriées (celles qui ont été désaisonnalisées et celles qui ne l'ont pas été) plutôt que de désaisonnaliser directement les séries agrégées parce que l'on peut plus facilement dégager la saisonnalité significative par la désaisonnalisation des séries au niveau de l'article. La raison en est que la saisonnalité pour un article à l'intérieur d'une série agrégée peut être compensatoire et obscurcir une éventuelle forte saisonnalité au niveau de l'article.

## 2. Données chronologiques désaisonnalisées de l'IPC

L'utilisation de différents systèmes de pondération présente des problèmes pour la désaisonnalisation, puisque l'introduction de pondérations différentes peut modifier les caractéristiques saisonnières aux niveaux agrégés. Une solution à ce problème, celle utilisée pour l'IPC, consiste à concentrer le processus de désaisonnalisation dans une période de temps où le système de pondération demeure fixe. Pour la révision actuelle, les séries des articles ont été mises sur la base de 1974=100 pour la désaisonnalisation et l'agrégation (voir le document de référence L'indice des prix à la consommation - Révision fondée sur les dépenses de 1974 - Concepts et Procédés, nº 62-546 au catalogue). Toutefois, les séries officielles publiées du Canada, non désaisonnalisées, sont formées à partir des pondérations basées sur les dépenses de 1967 pour la période allant de mai 1973 à septembre 1978. C'est pourquoi, bien que l'on ait élaboré des facteurs de désaisonnalisation par l'emploi de données non officielles remontant à janvier 1974, les mouvements de l'IPC officiel désaisonnalisé ne portent que sur la période postérieure à septembre 1978.

#### 3. Projection de facteurs

Dans l'ensemble, il s'agit d'appliquer le programme X-11 aux séries d'articles qui, conformément aux directives, semblent avoir suffisamment de saisonnalité pour justifier la désaisonnalisation. Le programme X-11 produit entre autres, des facteurs saisonniers mensuels pour une année à l'avance. Pour la projection de ces facteurs, on utilise la formule suivante:

 $S_{n+1} = S_n + 1/2$   $(S_n - S_{n-1})$ , "S" étant le facteur saisonnier et "n" la période courante.

The projected factors are used in the 12 subsequent months to seasonally adjust the appropriate item indexes. Determination of projected seasonal factors for each 12-month period is carried out at the commencement of each calendar year.

It is useful to calculate 12-month forecasts of seasonal patterns of aggregated series. Seasonally adjusted aggregate indexes, however, are built up from their individually adjusted component items, and thus are not the product of direct deseasonalization. Accordingly, in contrast to the practice of projecting seasonal adjustment factors 12 months ahead in the case of individual item series, it is not possible to determine in advance exactly what implicit seasonal factors will be applicable to aggregate series. In actual fact, in any given month seasonal adjustment factors for aggregate indexes constitute a by-product of, rather than an input to, the seasonal adjustment procedures that have been adopted. They are obtained implicitly with the formula:

 $\frac{\text{Original Index}}{\text{Seasonally Adjusted Index}} = \text{Seasonal Factor}$ 

In order to produce forecasts of seasonal factors for aggregate series, using historical factors obtained implicitly, we apply the above formula, i.e.:

$$S_{n+1} = S_n + 1/2 (S_n - S_{n-1})$$

to obtain projected implicit seasonal factors for the aggregate series. The results of this procedure, however, will not necessarily be identical, month-bymonth, with the actual implicit factors derived from the aggregation process. The forecasts of monthly implicit seasonal factors serve only to provide a general indication of seasonal patterns.

#### 4. Revision Policies

The revision of seasonally adjusted data will take place once a year and on a fixed date. To determine the extent of the revision, it has been established that:

- (i) the percentage of the difference between the new and the old seasonally adjusted values will be computed;
- (ii) the years in which more than five of the percentages obtained in section (i) are greater than one-half per cent (0.5%) will be determined; and
- (iii) the new seasonally adjusted values will be substituted for those previously published, commencing with January of the earliest full year determined in (ii).

This procedure will be followed for several reasons. First, the seasonally adjusted data for the current

On utilise les facteurs ainsi obtenus pour les 12 mois qui suivent pour désaisonnaliser les indices appropriés. La projection des facteurs saisonniers pour chaque période de 12 mois se fait au début de chaque année civile.

Il est utile de calculer des prévisions sur 12 mois des caractéristiques saisonnières des séries agrégées. Les indices agrégés désaisonnalisés, cependant, sont construits à partir de leurs composantes désaisonnalisées individuellement et ils ne sont donc pas le résultat d'une désaisonnalisation directe. En conséquence, contrairement à la méthode qui consiste à faire la projection des facteurs de désaisonnalisation 12 mois à l'avance dans le cas des séries d'articles, il n'est pas possible de déterminer à l'avance et de manière précise quels facteurs saisonniers implicites vont s'appliquer aux séries agrégées. En réalité, pour quelque mois que ce soit, facteurs de désaisonnalisation des indices agrégés constituent un sous-produit des méthodes de désaisonnalisation adoptées plutôt qu'un apport à ces dernières. Ils sont donnés par la formule suivante:

 $\frac{\text{Indice initial}}{\text{Indice désaisonnalisé}} = \text{Facteur saisonnier}$ 

Pour obtenir des prévisions des facteurs saisonniers pour les séries agrégées, à partir des facteurs chronologiques obtenus implicitement, nous utilisons la formule ci-dessus, c.-à-d.:

$$S_{n+1} = S_n + 1/2 (S_n - S_{n-1})$$

pour calculer les projections des facteurs saisonniers implicites des séries agrégées. Toutefois, les résultats ne seront pas nécessairement toujours identiques d'un mois à l'autre aux facteurs implicites réels obtenus lors de l'agrégation. Les prévisions des facteurs saisonniers implicites mensuels ne donnent qu'une indication générale des caractéristiques saisonnières.

## 4. Principes de révision

La révision des données désaisonnalisées aura lieu une fois par an et à une date fixe. Pour déterminer l'ampleur de cette révision, on a décidé de:

- (i) calculer le pourcentage de la différence entre les anciennes et les nouvelles valeurs désaisonnalisées;
- (ii) déterminer les années où plus de cinq des pourcentages obtenus à la rubrique (i) dépassent un demi pourcent (0.5 %); et de
- (iii) substituer les nouvelles séries désaisonnalisées à celles publiées auparavant, en commençant par le mois de janvier de la plus récente année complète déterminée en (ii).

Cette procédure sera suivie pour plusieurs raisons. En premier lieu, les données désaisonnalisées de l'année en cours

year have been produced using projected seasonal factors derived from previous years' unadjusted data. When the unadjusted data are available at the end of the current year, introduction of these data into the seasonal adjustment calculation will improve the quality of the adjustment for the current period. Secondly, if a new seasonal pattern, or a shift in the pattern or the amplitude is identified, these changes might well affect the seasonally adjusted results for a number of years in the historical record. Thirdly, in order to produce projected seasonal factors to be used in the following 12 months, it is necessary to incorporate the latest raw (unadjusted) data.

In addition, the revision procedure provides the opportunity to examine each item series in the light of the new information obtained in the current year, to determine if each of the item series already adjusted are still seasonal and if any of the unadjusted series have become seasonal. A change in status could occur for series which are either just outside or just inside the limits set up by the Statistics Canada guidelines. The number of such series, however, should be relatively small.

With regard to the above considerations, it has been decided to consider revision of the seasonally adjusted CPI data at the completion of each calendar year. If required, revised seasonally adjusted historical data will be released with the January CPI for the next year.

#### Section C

#### Seasonally Adjusted Groups and Items

The seasonality identified in the CPI is mainly concentrated in about one third of the items that comprise it, the other two-thirds exhibit very little seasonality.

Those items exhibiting sufficient seasonality to warrant their adjustment are included in the groups listed below:

Food

Food for home consumption

Meat, poultry and fish

Beef Pork Poultry

Fruit and vegetables

Fresh fruit Fresh vegetables ont été calculées grâce aux projections de facteurs saisonniers obtenus à partir de données non désaisonnalisées d'années précédentes. Lorsque l'on dispose de données non désaisonnalisées à la fin de l'année en cours, l'introduction de ces données dans le calcul de désaisonnalisation améliore la qualité de la désaisonnalisation pour la période en cours. Deuxièmement, si l'on détecte une nouvelle caractéristique saisonnière ou une modification de l'amplitude d'une caractéristique, ces changements pourraient bien affecter les résultats de la désaisonnalisation pour un certain nombre d'années dans la série chronologique. Enfin, pour effectuer la projection de facteurs saisonniers destinés à être utilisés pour les 12 mois suivants, il est nécessaire d'incorporer les dernières données brutes (non désaisonnalisées).

De plus, la révision fournit l'occasion d'étudier chaque série d'articles à la lumière des nouveaux renseignements obtenus au cours de l'année courante, pour déterminer si chacune des séries déjà désaisonnalisée contient encore de la saisonnalité, ou si l'une des séries non désaisonnalisées contient maintenant de la saisonnalité. La nature des séries qui sont situées soit juste à l'extérieur, soit juste à l'intérieur des limites définies par les directives de Statistique Canada pourrait s'en trouver modifiée. Ces séries devraient cependant demeurer relativement peu nombreuses.

Compte tenu des considérations énoncées ci-dessus, il a été décidé d'envisager la révision des données désaisonnalisées de l'IPC à la fin de l'année civile. Au besoin, on publiera les données chronologiques désaisonnalisées révisées avec l'IPC de janvier pour l'année suivante.

#### Section C

#### Groupes et articles désaisonnalisés

La saisonnalité isolée dans l'IPC se concentre principalement sur le tiers environ des éléments constitutifs, les deux autres tiers présentant très peu de saisonnalité.

Le groupe ci-dessous est la liste des éléments qui présentent suffisamment de saisonnalité pour justifier leur désaisonnalisation:

#### Aliments

Aliments consommés à la maison

Viandes, volaille et poisson

Boeuf Porc Volaille

Fruits et légumes

Fruits frais Légumes frais Housing

Shelter

Household operation

Clothing

Women's wear Girls' wear Men's wear Boys' wear

Transportation

Health and personal care

Recreation, reading and education

Tobacco and alcohol

CPI Reclassified by Goods and Services

Goods

Durable goods Semi-durable goods Non-durable goods

Non-durable goods excluding food

Services

All-items excluding food

Habitation

Logement

Dépenses de ménage

Habillement

Vêtements pour femmes Vêtements pour filles Vêtements pour hommes Vêtements pour garçons

Transports

Santé et soins personnels

Loisirs, lecture et formation

Tabacs et boissons alcoolisées

Classification complémentaire de l'IPC par biens et services

Biens

Biens durables Biens semi-durables Biens non durables

Biens non durables (sauf aliments)

Services

Ensemble sans les aliments

# Appendix 4

# CITY AVERAGE RETAIL PRICES

#### 1. Introduction

The Prices Division of Statistics Canada collects, each month, many thousands of retail prices in most of the large centres across the country. However, though these prices may be entirely suitable for compiling the Consumer Price Index, they do not necessarily yield representative and comparable average prices. There are a number of reasons for this. Variations in food habits and in the brands selected among cities cause city-to-city differences that do not represent real price differentials for the same quality. The brands selected for the production of the CPI are the volume sellers, both manufacturers' and private label brands and the Index produced for any one city, as well as for Canada, will be based upon the price movements of a heterogeneous mixture that might well be quite different from the heterogeneous mixture of another city. To produce an accurate measure of price change within a city, it is essential to ensure that the quantities, brands and sizes selected are sufficiently important to represent price movement. However, to produce an accurate measure of average prices at one point in time which will permit comparison between cities, it is essential that the qualities, brands and sizes selected are sufficiently similar so as not to artificially generate price differentials.

Further, although market forces will generally impose a certain degree of uniformity on price movements within a city, price ranges at any point of time can nevertheless still be quite wide. Thus, a sample of retail outlets which is sufficiently large to accurately monitor price movement, might well be too small to adequately encompass price spreads at one point of time.

Thus, in order to satisfactorily produce representative and comparable average prices, it was deemed necessary to undertake a special pricing survey which had the features outlined below.

# 2. Average Prices Survey

The Average Retail Prices Surveys are normally undertaken during the second or third week of October

# Appendice 4

# PRIX DE DÉTAIL MOYENS PAR VILLE

#### 1. Introduction

La Division des prix de Statistique Canada recueille chaque mois des milliers de prix de détail dans la plupart des grands centres urbains du pays. Mais, bien que ces prix puissent entièrement servir à la confection de l'indice des prix à la consommation, ils ne donnent pas nécessairement des prix movens représentatifs et comparables. Il y a un certain nombre de raisons à cela. Les différences entre les habitudes de dépenses alimentaires et les marques choisies dans les différentes villes entraînent des différences entre villes qui ne représentent pas les différences réelles entre les prix pour un produit de même qualité. Les marques retenues pour la confection de l'IPC sont les articles qui se vendent en grandes quantités, qu'il s'agisse de marques de commerces de fabricants ou d'entreprises individuelles et l'indice d'une ville quelconque, ainsi que celui de l'ensemble du Canada sera basé sur le mouvement des prix d'un ensemble hétérogène qui peut fort bien différer assez sensiblement de l'ensemble d'une autre ville. Pour obtenir une mesure adéquate des mouvements de prix dans une ville, il est essentiel de s'assurer que les quantités, les marques et les tailles choisies soient suffisamment importantes pour représenter le mouvement des prix. Cependant, afin d'obtenir une mesure adéquate des prix moyens à un instant donné qui permette une comparaison entre villes, il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire artificiellement des différences de prix.

Par ailleurs, bien que les forces agissant sur le marché vont en général imposer un certain degré d'uniformité aux mouvements de prix dans une ville, l'intervalle des prix à un instant donné peut être néanmoins assez étendu. Ainsi, un échantillon de magasins de détail suffisamment important pour suivre précisément le mouvement des prix peut très bien se révéler trop petit pour représenter adéquatement l'éventail des prix à un temps donné.

Donc, afin d'obtenir des prix moyens représentatifs et comparables qui soient satisfaisants, on a jugé nécessaire d'entreprendre une enquête spéciale d'observation des prix, dont les caractéristiques sont décrites ci-dessous.

# 2. Enquête sur les prix moyens

Une enquête sur les prix moyens de détail est normalement effectuée durant la deuxième ou troisième semaine and April. Prices of approximately 60 items, consisting mainly of food and some personal care and household supply products, are collected in a large number of outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Sault Ste. Marie, Thunder Bay, Winnipeg, Saskatoon, Regina, Calgary, Edmonton, Vancouver and Victoria.

The sample of stores is designed so that the outlets selected have, between them, approximately half or more of the grocery store sales for each city. Grocery stores are defined, for purposes of this Survey, as those with meat sales valued at between 15% and 50% of total sales. Sales data are derived from Census of Merchandising information, updated, where necessary, by local advice from Statistics Canada Regional Offices.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

# 3. Calculation Methodology

#### (a) City Prices

Prices are collected in both chain and independent stores. (A chain store organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

#### (b) Weighted City Averages

A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

d'octobre et d'avril. Les prix de quelque 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Sault Ste. Marie, Thunder Bay, Winnipeg, Saskatoon, Régina, Calgary, Edmonton, Vancouver et Victoria.

L'échantillon des magasins est défini de telle façon que les points de vente choisis, pris ensemble, comptent pour environ la moitié ou plus des ventes des épiceries dans chaque ville. Aux fins de cette enquête, les épiceries étaient définies comme celles dont les ventes de viande représentaient entre 15 % et 50 % du total des ventes. Les données des ventes sont dérivées à partir des données du recensement des marchandises, mises à jour, lorsque nécessaire, sur recommandation des bureaux régionaux de Statistique Canada.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

#### 3. Méthode de calcul

#### a) Prix urbains

Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas ces articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

#### b) Moyennes pondérées des villes

Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

### 4. Monthly Updating of Price Averages

The considerable resources required to collect and analyse the data to produce representative and comparable average prices cannot be expended each month. It therefore becomes necessary to update the survey prices on a regular monthly basis until another average prices survey can be undertaken. Because such updated prices are not themselves the direct product of an expanded average prices survey, but instead are calculated by the application of some measure to the actual averages, they are designated as "Calculated Average Prices".

Under normal circumstances a readily available method of producing Calculated Average Prices for the month subsequent to the survey months would be to apply the movement of the relevant city and item CPI to the corresponding average prices for the survey months. However, because price collection for the survey months falls between the pricing dates for the October and November or April and May CPI, the price movement for these periods for certain items has to be adjusted to take into account this time lag. For the months subsequent to November or May, the full month-to-month movement is applied to the latest available calculated average prices to produce the following month's calculated average prices. Occasionally, in periods of volatile price movements, the methodology employed in adjusting prices falling between the CPI pricing dates becomes extremely subjective, yielding results which are open to misinterpretation. Calculated Average Prices for items falling in this category may, therefore, not be published. It is important to note that the Calculated Average Prices are estimates of retail price levels in each city. Since they are not derived from actual surveys of prices in the marketplace, but rather from an updating of previously gathered price information, they may not always precisely reflect actual market conditions at a specific point in time.

Updated calculated average prices are, at present, published only for the 14 index cities. This is attributable to the limited experience which has been acquired in using this updating methodology for the 12 non-index cities.

## 5. Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey is provided in the immediately following pages.

# 4. Mise à jour mensuelle des moyennes de prix

On ne peut consacrer chaque mois les ressources considérables nécessaires à la collecte et à l'analyse des données pour produire des prix moyens représentatifs et comparables. Il devient donc nécessaire de mettre à jour les prix de l'enquête sur une base mensuelle régulière jusqu'à ce qu'il soit possible d'entreprendre une autre enquête sur les prix moyens. Étant donné que ces prix mis à jour ne sont pas eux-mêmes le produit direct d'une enquête exhaustive sur les prix moyens, mais qu'ils sont au contraire calculés par l'application d'une certaine mesure aux moyennes réelles, on les qualifie de "prix moyens calculés".

Dans des conditions normales, une méthode rapidement applicable pour obtenir des prix moyens calculés pour le mois de novembre consiste à appliquer le mouvement des IPC des articles en question aux prix moyens d'octobre de la ville observée. Cependant, la date du relevé des prix de l'enquête se situant entre les dates des relevés de prix des IPC d'octobre et novembre ou d'avril et mai. Il faut ajuster la variation de prix de ces périodes pour certains articles afin de tenir compte de cet écart de temps. Pour le mois suivant, novembre ou mai, la variation totale d'un mois à l'autre peut s'appliquer au dernier prix moyen calculé disponible pour obtenir le prix moyen calculé du mois suivant. Occasionnellement, dans des périodes où les prix sont très volatiles, la méthodologie utilisée pour rajuster les prix entre les relevés de l'IPC devient extrêmement subjective, produisant ainsi des résultats que l'on pourrait mal interpréter. Il se pourrait, donc, que les prix moyens calculés pour les articles se rapportant à cette catégorie ne soient pas publiés. Il est important de noter que les prix moyens calculés sont une estimation du niveau des prix moyens dans chaque ville. Comme ils ne proviennent pas d'enquêtes réelles sur les prix pratiqués mais représentent plutôt une mise à jour de renseignements sur les prix recueillis auparavant, ils ne rendent pas toujours compte avec précision de la conjoncture commerciale à un instant donné.

Les prix moyens calculés ne sont présentement publiés que pour les 14 villes dont on produit un indice séparé à cause de notre expérience limitée face à l'utilisation de la méthode de mise à jour pour les 12 villes dont on ne produit pas un indice séparé.

## 5. Spécifications des articles

Les pages qui suivent, présentent une description des quelques 60 articles contenus dans l'enquête des prix moyens.

# CITY AVERAGE RETAIL PRICES – ITEM SPECIFICATIONS

## **Detailed Specification**

#### **Dairy Products**

Milk. Fresh fluid whole dairy milk, pasteurized, may be homogenized or contain vitamin D. Disposable carton of 1 litre.

**Evaporated milk.** Generally available manufacturers' brands (store brands excluded), unsweetened, may be vitaminized, 385 ml. can.

Powdered milk. Generally available manufacturers' brands (store brands excluded), powdered skim milk, 3-pound card-board package, may be pasteurized or vitaminized.

Ice cream. Store brand, vanilla, between 10% and 12% milk fat content in regular (non-fancy) container of 2 litres.

Butter. Lowest price available in store for first grade, creamery butter, salted, parchment or foil wrapped, 1 pound.

Cheese. Generally available manufacturers' brands (store brands excluded), process cheese square slices, plain, without seasoning, relishes or condiments, individually wrapped, 1/2 pound.

#### Poultry and Eggs

Chicken. Eviscerated, fresh or frozen, broiler or fryer, whole, 2 to 4 pounds, Grade A, price per pound.

Eggs. Large eggs, Grade A, in a carton of 1 dozen. Medium eggs, Grade A, in a carton of 1 dozen.

#### Beef

Sirloin steak. Cut from section of hind quarter next to short loin, bone-in or partially boned, fresh, Canada A or B brand, pound.

Round steak. Full cut of section of hind quarter next to rump, fresh, Canada A or B brand, boneless, pound.

Prime rib roast. Standing, bone-in, short cut, 7 inches, any ribs within the first five of standard seven, fresh, Canada A or B brand, pound.

# PRIX DE DÉTAIL MOYENS PAR VILLE — SPÉCI-FICATIONS DES ARTICLES

# Spécification détaillée

#### **Produits laitiers**

Lait. Lait de laiterie frais, liquide, entier, pasteurisé, peut être homogénéisé ou additionné de vitamine D. Contenant de 1 litre (en carton), non consigné.

Lait évaporé. Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré, peut être additionné de vitamines, boîte de 385 ml.

Lait en poudre. Marques des fabriquants largement distribuées (sauf les marques des magasins), lait écrémé en poudre, contenant en carton de 3 livres, peut être pasteurisé ou vitaminé.

Crème glacée. Marque du magasin, à la vanille, contenant de 10 % à 12 % de matière grasse de lait dans des contenants réguliers (non de fantaisie), 2 litres.

Beurre. Beurre de première qualité, le moins cher disponible dans le magasin, beurre de laiterie, salé, enveloppé dans du parchemin ou dans un emballage d'aluminium, 1 livre.

Fromage. Marques des fabricants largement distribuées (sauf les marques des magasins), fromage fondu, en tranches carrées, enveloppées individuellement, nature, sans assaisonnement, ni relish, ni condiments, 1/2 livre.

#### Volaille et oeufs

**Poulet**. Vidé, frais ou congelé, à griller ou à frire, entier, de 2 à 4 livres, catégorie A, vendu à la livre.

Oeufs. Oeufs de grosse taille, catégorie A, en boîte de 12. Oeufs de taille moyenne, catégorie A, en boîte de 12.

#### Boeuf

Bifteck de surlonge. Morceaux coupés dans la partie du quartier de derrière voisine du bout de longe, non désossé ou partiellement désossé, frais, marque Canada A ou B, livre.

Bifteck dans la ronde. Coupe entière d'une section du quartier de derrière voisine de la croupe, frais, marque Canada A ou B, désossé, livre.

Rôti de côtes de choix. Nature, non désossé, coupe courte, 7 pouces, toutes les côtes parmi les cinq premières sur les sept côtes normales, frais, marque Canada A ou B, livre.

#### Beef - Concluded

Blade roast (blade in). Cut from fore quarter next to rib section, fresh, Canada A or B brand, pound.

Blade roast (blade out). Cut from fore quarter next to rib section, fresh, Canada A or B brand, pound.

Stewing beef. Boneless stewing beef, fresh, Canada A or B brand, pound.

**Ground beef, regular.** Ground beef, with 24% to 30% fat content, fresh, pound.

#### Pork

Pork, centre cut chops. Cut from centre of loin, fresh, bone-in, trimmed, excluding "fast fry", "brown and serve", "rib chops", mixed cut and frozen chops, pound.

Pork, butt roast. Cut from top half of shoulder, fresh, skin removed, about 1/2 inch fat left on, Boston Butt, pound.

Pork, butt roast. Cut from top half of shoulder, fresh, skin removed, about 1/2 inch fat left on, Boneless Butt, pound.

**Sausages.** Generally available manufacturers' brands (store brands excluded), pure pork sausages, fresh or frozen, pound.

Bacon. Generally available manufacturers' brands (store brands excluded), smoked, side bacon, sliced, rind off, vacuum packaged, packers first line.

#### Other Meat

Wieners. Generally available manufacturers' brands (store brands excluded). Made from beef and pork, ground, skinless, smoked and cooked, vacuum packaged, first grade, pound.

#### Fish

Salmon. Generally available manufacturers' brands (store brands excluded). British Columbia, sockeye salmon, first grade, stamped "Canada", 7 3/4 ounce tin.

#### Boeuf - fin

Rôti de palette (non désossé). Rôti coupé dans la partie du quartier de devant voisine de la section des côtes, frais, marque Canada A ou B, livre.

Rôti de palette (désossé). Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, livre.

**Boeuf à ragoût.** Désossé, boeuf à ragoût, frais, marque Canada A ou B, livre.

**Boeuf haché régulier.** Boeuf haché, matières grasses: 24 % à 30 %, frais, livre.

#### Porc

Porc, côtelettes, partie du centre. Coupe provenant du centre de la longe, frais, non désossé, paré, sauf les côtelettes "à cuisson rapide", "faire dorer et servir", "côtelettes de côtes", coupes diverses et la viande congelée, livre.

Porc, rôti de porc. Rôti coupé dans la moitié supérieure de l'épaule, frais, couenne enlevée, reste environ 1/2 pouce de gras, "Boston Butt", livre.

Porc, rôti de porc. Rôti coupé dans la moitié supérieure de l'épaule, frais, couenne enlevée, reste environ 1/2 pouce de gras, rôti désossé, livre.

Saucisses de porc. Marques des fabriquants largement distribuées (sauf les marques des magasins), saucisses de pur porc, livre.

Bacon. Marques des fabriquants largement distribuées (sauf les marques des magasins), fumé, bacon de flanc, en tranche, couenne enlevée, emballé sous vide, fabricants de première qualité.

#### Autre viande

Saucisses de Francfort. Marques des fabricants largement distribuées (sauf les marques des magasins). Faites de boeuf et de porc haché, sans peau, fumées et prêtes à servir, emballées sous vide, première qualité, livre.

#### Poisson

Saumon. Marques des fabricants largement distribuées (sauf les marques des magasins). Saumon de Colombie-Britannique, sockeye, de première qualité, étiqueté "Canada", boîte de 7 3/4 onces.

#### **Fats**

Shortening. Generally available manufacturers' brands (store brands excluded), processed from blends of edible vegetable oils and animal fats or 100% vegetable oils. May be partly hydrogenated, carton of 1 pound.

#### **Bakery and Cereal Products**

Flour, 2.5 kg. Generally available manufacturers' brands (store brands excluded) of white all purpose or bread flour, vitaminized may be pre-sifted. Excluding instantized, pastry and other special types, weight change as of October 1978.

Flour, 3.5 kg. Generally available manufacturers' brands (store brands excluded) of white all purpose, vitaminized flour. Excluding instantized, pastry and other special types, weight change as of October 1978.

Corn flakes. Generally available manufacturers' brands (store brands excluded), corn flakes, 675 g package, weight change as of October 1978.

**Spaghetti.** Generally available manufacturers' brands (store brands excluded) of ready cut long spaghetti, 500 g package, weight change as of April 1979.

Bread. Store brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched.

**Bread**. Manufacturers' brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched.

Soda crackers. Generally available manufacturers' brand (store brands excluded), salted, unsalted or saltines, 16 ounces.

#### Sugar and Sweets

Sugar. White, granulated, cane or beet sugar, bag of 2 kilograms.

Jam. Generally available manufacturers' brands (store brands excluded), pure strawberry jam, 9-ounce glass jar.

#### Fruit

Oranges. California, medium size (138 or 113) price per pound.

#### Matières grasses

Graisse végétale. Marques des fabricants largement distribuées (sauf les marques des magasins), fabriquée à partir de mélanges d'huiles végétales comestibles et de graisses animales ou d'huile végétale à 100 %. Peut être partiellement hydrogénée, carton de 1 livre.

#### Céréales et produits de boulangerie

Farine, 2.5 kg. Marques des fabricants largement distribuées (sauf les marques des magasins) blanche tout usage ou farine à pain, additionnée de vitamines peut être prétamisée. Exclure la farine instantanée, la farine à pâtisserie et les autres types spéciaux de farine, changement de poids en octobre 1978.

Farine, 3.5 kg. Marques des fabriquants largement distribuées (sauf les marques des magasins), farine tout usage, additionnée de vitamines. Exclure la farine instantanée, la farine à pâtisserie et les autres types spéciaux de farine, changement de poids en octobre 1978.

Flocons de mais. Marques des fabricants largement distribuées (sauf les marques des magasins), mais en flocons, paquet de 675 g, changement de poids en octobre 1978.

**Spaghetti**. Marques des fabricants largement distribuées (sauf les marques des magasins), spaghetti, coupe longue, paquet de 500 g, changement de poids en avril 1979.

Pain. Marques des magasins, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines.

Pain. Marques des fabricants, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines.

Biscuits soda. Marques des fabricants largement distribuées (sauf les marques des magasins), salés, non salés ou "saltines", paquet de 16 onces.

#### Sucre et produits sucrés

Sucre. Blanc, cristallisé, de canne ou de betterave, sac de 2 kilogrammes.

Confiture. Marques des fabricants largement distribuées (sauf les marques des magasins), pure, de fraises, pot de verre de 9 onces.

#### **Fruits**

Oranges. De Californie, grosseur moyenne (138 ou 113) prix à la livre.

#### Fruit - Concluded

Grapefruit. United States, white, may be seedless, size 48's, if not available 40's or 56's, good quality, price per pound.

Bananas. First grade, price per pound.

Apple juice. Generally available manufacturers' brands (store brands excluded), unsweetened, natural, may be vitaminized, choice grade, single strength, 48 ounces.

#### Vegetables

**Potatoes.** Table potatoes, white, Canada No. 1, 10-pound bag.

Onions. Cooking onions, common white, yellow or red, dry, good quality, in plastic or cellophane packages (up to a 3-pound package), price per pound.

Carrots. Tops completely removed, good quality, in plastic or cellophane packages (up to a 3-pound package), price per pound.

Cabbage. Fresh, domestic or imported, green cabbage, good quality, price per pound of an average size head.

**Celery**. Celery stalks, green, fresh, may be trimmed or clipped, price per pound.

Lettuce. Fresh head, green, good quality, average size head, price per pound.

Tomatoes, canned. Generally available manufacturers' brands (store brands excluded), of canned field tomatoes, choice grade, 28 fluid ounces.

**Infants' food.** Generally available manufacturers' brands (store brands excluded) of baby food, strained or vegetable mixture, glass jar or can of 4 1/2 ounces.

Beans. Generally available manufacturers' brands (store brands excluded) of cooked beans with pork and tomato sauce, 14 fluid ounces.

**Soup.** Generally available manufacturers' brands (store brands excluded) of vegetable soup, approximately 10 ounces.

Tomato juice. Generally available manufacturers' brands (store brands excluded), juice of fresh tomatoes, may contain salt, sugar or dextrose, fancy grade, 48 ounces.

#### Fruits - fin

Pamplemousses. Des États-Unis, à chair blanche, grosseur 48; autrement, grosseur 40 ou 56, bonne qualité, prix à la livre.

Bananes. Première qualité, vendues à la livre.

Jus de pommes. Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré, naturel, peut être additionné de vitamines, catégorie de choix, n'ayant pas été dilué, boîte de 48 onces liquides.

#### Légumes

Pommes de terre. Pommes de terre de table, à chair blanche, catégorie Canada nº 1, sac de 10 livres.

Oignons. Oignons à cuire, ordinaires, blancs, jaunes ou rouges, secs, bonne qualité, en paquet de matière plastique ou de cellophane (paquet jusqu'à 3 livres), vendus à la livre.

Carottes. Queues complètement enlevées, bonne qualité, paquet de matière plastique ou de cellophane (paquet jusqu'à 3 livres), vendues à la livre.

Choux. Frais, variété canadienne ou importée, choux vert, bonne qualité, prix à la livre d'un chou de grosseur moyenne.

Céleri. Pieds de céleri, verts, frais, peuvent être taillés, prix à la livre.

Laitue. Fraîche, verte, bonne qualité, taille moyenne, prix à la livre.

Tomates, en conserve. Marques des fabricants largement distribuées (sauf les marques des magasins), de tomates en conserve de plein champ, catégorie de choix, boîte de 28 onces liquides.

Nourriture pour bébés. Marques des fabricants largement distribuées (sauf les marques des magasins), de nourriture pour bébés, égouttée ou en purées, pots de verre ou boîte de 4 1/2 onces.

Fèves au lard. Marques des fabricants largement distribuées (sauf les marques des magasins), de fèves au lard cuites avec du porc et de la sauce tomate, boîte de 14 onces liquides.

**Soupe**. Marques des fabricants largement distribuées (sauf les marques des magasins) de soupe aux légumes, boîte d'environ 10 onces.

Jus de tomates. Marques des fabricants largement distribuées (sauf les marques des magasins) de jus de tomates fraîches; peut contenir du sel, du sucre ou du dextrose, catégorie de fantaisie, 48 onces.

#### Beverages

Tea bags. Generally available manufacturers' brands (store brands excluded), orange pekoe tea bags, package of 60 two-cup paper bags (8 ounces).

Coffee, roasted. Generally available manufacturers' brands (store brands excluded), roasted whole beans, regular or all purpose ground coffee, good quality, 1 pound paper bag.

Coffee, instant. Generally available manufacturers' brands (store brands excluded), dried coffee, extract, soluble, pure or may have added dextrin, dextrose or maltose, 6 ounces.

Soft drinks. Generally available manufacturers' brands (store brands excluded), cola flavour. Returnable bottle type, excluding deposits. One bottle of 750 ml.

#### Miscellaneous Groceries

Jelly powder. Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 3 ounces.

#### **Supplies and Personal Care Items**

Synthetic detergent powder. Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 3 litres.

Scouring powder. Generally available manufacturers' brands (store brands excluded), cleansing powder or cleanser with bleaching agent, 14 ounces.

Toilet paper. Generally available manufacturers' brands (store brands excluded) of white or pastel shades, medium quality, perforated, single sheet tissue. Multiple units of 2, about 600 to 650 sheets in roll, approx. 4" x 5", wrapped in poly. Price per roll.

Toilet soap. Generally available manufacturers' brands (store brands excluded). Selection confined to wrapped and popular brands sold in multiple units of three or four bars per package. Guest or bath sizes, as well as varieties with high synthetic or perfume content, excluded. Price per bar.

Toothpaste. Generally available manufacturers' brands (store brands excluded), standard dentifrice, may have fluoride, 50 ml.

#### **Boissons**

Thé en sachets. Marques des fabricants largement distribuées (sauf les marques des magasins), thé en sachets "orange Pekoe" paquet de 60 sachets de papier pour deux tasses chacun (8 onces).

Café torréfié. Marques des fabricants largement distribuées (sauf les marques des magasins), torréfié, en grains entiers, ordinaire ou moulu "tout usage", bonne qualité, sacs en papier de 1 livre.

Café instantané. Marques des fabricants largement distribuées (sauf les marques des magasins), séché, extrait, soluble, pur ou peut être additionné de dextrine, de dextrose ou de maltose, pot de 6 onces.

Boissons gazeuses. Marques des fabricants largement distribuées (sauf les marques des magasins), saveur de cola. Bouteille consignée, prix de la bouteille non compris. Une bouteille de 750 ml.

#### Articles divers d'épicerie

Poudre à gelée. Marques des fabricants largement distribuées (sauf les marques des magasins), de poudre à gelée pour dessert à saveur, paquet de 3 onces.

#### Fournitures et articles de soins personnels

Détersif synthétique en poudre. Marques des fabricants largement distribuées (sauf les marques des magasins), tout usage, cristallisé ou en poudre, boîte de 3 litres.

Poudre à récurer. Marques des fabricants largement distribuées (sauf les marques des magasins), poudre à récurer avec agent de blanchiment, contenant de 14 onces.

Papier hygiénique. Marques des fabricants largement distribuées (sauf les marques des magasins), blanc ou de couleur pastel, qualité moyenne, perforé, une seule épaisseur. Paquets de 2, d'environ 600 à 650 feuilles par rouleau, 4" x 5", enveloppés dans du polyéthylène. Prix par rouleau.

Savon de toilette. Marques des fabricants largement distribuées (sauf les marques des magasins). Choix limité aux marques emballées et populaires vendues en groupe de trois ou quatre pains par paquet. Les savons de taille pour invité ou de bain de même que les variétés à contenu synthétique ou de parfum, sont exclus. Prix à l'unité.

Pâte dentifrice. Marques des fabricants largement distribuées (sauf les marques des magasins), pâte dentifrice ordinaire peut contenir du fluorure, tube de 50 ml.

## Supplies and Personal Care Items - Concluded

Cleansing tissues. Generally available manufacturers' brands (store brands excluded), package of 200 double tissues, approximately 8" to 8 1/2" x 9 1/2" size.

#### Tobacco

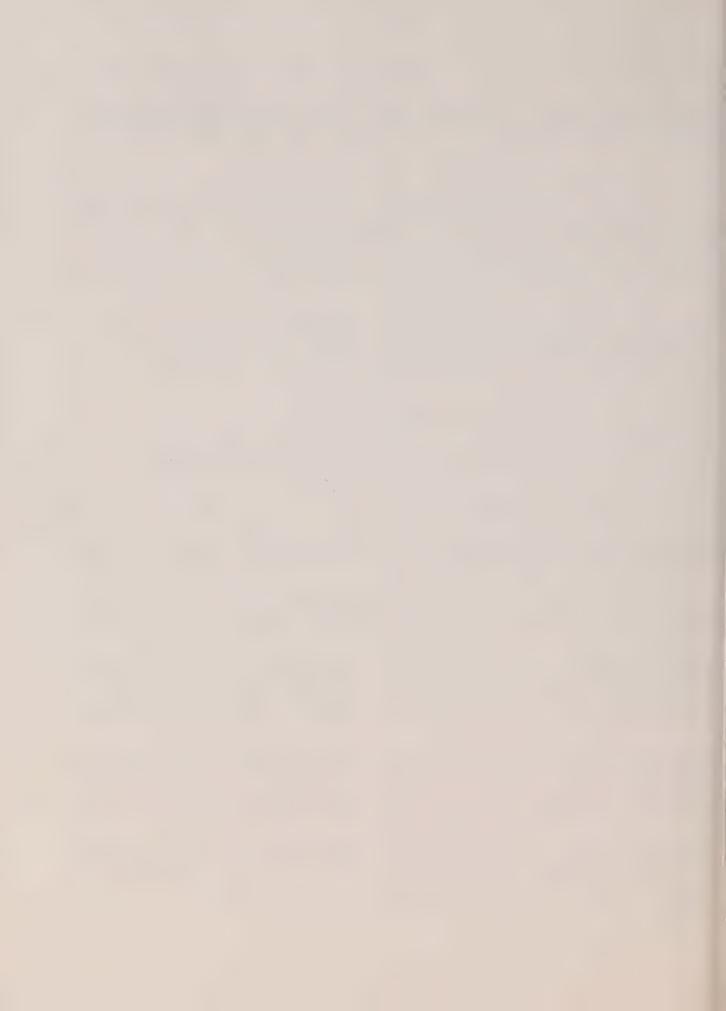

Cigarettes. Generally available popular brands, king size, filter tip, carton of 200.

### Fournitures et articles de soins personnels – fin

Papier-mouchoir. Marques des fabricants largement distribuées (sauf les marques des magasins), paquet de 200 mouchoirs double-épaisseur, taille approximative de 8" à 8 1/2" x 9 1/2".

#### **Tabacs**

Cigarettes. Marques populaires couramment disponibles, grand format, bout filtre, carton de 200.

# Appendix 5

# CANADIAN INTER-CITY RETAIL PRICE COMPARISONS

Table 12 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of commodities and services at the specified point in time.

The data base of this place-to-place study of comparative retail prices was largely drawn from the large volume of price quotations collected for the production of the monthly city consumer price indexes. For the inter-city food price differentials, however, use was also made of data gathered in a special program of pricing undertaken annually for publication of City Average Retail Prices.<sup>1</sup>

In developing these spatial price relationships, efforts were made to achieve comparability by seeking to equate qualities of goods and services in the various locations and by matching types of retail outlets so far as possible. To optimize price comparability between locations, differential price measurements were initially derived separately as between the following pairs of cities:

St. John's Halifax Charlottetown – Halifax - Halifax Saint John - Halifax Ottawa - Montréal Toronto Ottawa - Toronto - Winnipeg Toronto - Winnipeg Regina - Winnipeg Edmonton - Vancouver Edmonton

Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names whenever possible and also with some regard for comparability of retail outlets and merchandising practises. By means of a linking procedure, the paired city item indexes were initially compared with their counterparts in a common base city; subsequently they were related to the weighted average of the combined 11 cities equalling 100. The city-to-city price relationships for individual items thus derived were than aggregated by

# Appendice 5

## COMPARAISONS ENTRE LES PRIX DE DÉTAIL DANS DIFFÉRENTES VILLES DU CANADA

Le tableau 12 présente les différences de prix à la consommation de 11 villes du Canada, situées dans les 10 provinces, pour un nombre choisi de biens et de services, pour la période de temps spécifiée.

Les données de cette étude comparative de prix de détail proviennent en grande partie du relevé de prix utilisé pour la production de l'indice mensuel des prix à la consommation. On a, toutefois, utilisé les données obtenues dans le cadre d'un programme annuel spécial de relevé des prix servant à la publication des prix de détail moyens par ville¹ pour déterminer les différences de prix de la nourriture entre les villes.

Des efforts ont été entrepris pour développer des comparaisons valables en cherchant à obtenir des qualités identiques de biens et de services dans les différents endroits et en couplant, lorsque possible, des points de vente au détail comparables, pour déterminer les relations de prix spatiales. Afin d'optimiser la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour les paires de villes suivantes:

St. John's - Halifax Charlottetown - Halifax Halifax Saint John Halifax Ottawa - Montréal Toronto - Toronto Ottawa - Winnipeg Toronto - Winnipeg Regina - Winnipeg Edmonton - Vancouver Edmonton

À l'intérieur de chaque paire de villes, les prix ont été couplés au niveau de l'article en s'assurant que les spécifications étaient identiques, y compris les marques, lorsque c'était possible et aussi en tenant compte de la comparaison des points de vente au détail et des méthodes de vente. Grâce à la procédure de couplage, les indices couplés des villes ont d'abord été comparés au niveau de l'article et transformés sur la base d'une ville commune, ils ont ensuite été reliés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Les relations entre les prix d'articles entre les villes ainsi déduites ont été regroupées en applicant le schéma de

<sup>1</sup> See Table 10 and Appendix 4.

<sup>1</sup> Voir tableau 10 et appendice 4.

application of the combined 11-city CPI weighting patterns,<sup>2</sup> updated for price change to the time of the intercity retail price comparison study. Measurements of inter-city retail price differentials are updated, as required, by application of the relative movement of item prices in each city, obtained from the relevant city CPI.

It should be noted, especially in periods of volatile price movement, that city-to-city retail price relationships may be significantly affected by the timing and the relative rate of price change occurring in each location. Furthermore, since the retail prices used in this study are those faced by consumers, they include sales and excise taxes as applicable. Thus, comparative rates of provincial sales tax in effect in the various cities at the time of price comparison, as well as changes in the rate of incidence of such taxes, can be of importance in explaining inter-city price differentials for tax-affected items or groups of items.

pondération de l'IPC des 11 villes combinées<sup>2</sup>, mis à jour par la variation de prix qui s'est effectuée jusqu'au moment de l'étude comparative des prix de détail entre les villes. Les mesures de comparaison des prix de détail entre villes sont mises à jour, lorsque nécessaire, en utilisant le mouvement des prix obtenu des IPC de chaque ville, au niveau de l'article.

Il convient de noter, surtout dans une période de fluctuation des prix, que les relations entre les prix de détail d'une ville à l'autre peuvent varier de façon significative selon la période de relevé des prix et le taux relatif de variation des prix à chaque endroit. De plus, puisque les prix de détail utilisés pour cette étude sont ceux que les consommateurs doivent payer, les taxes de vente et d'accise y sont incluses. Donc, les taux comparatifs des taxes de vente provinciale effectives dans les diverses villes au temps de la comparaison, de même que le changement dans le taux ou l'incidence de ces taxes, peuvent être importantes pour expliquer les différences de prix entre les villes des articles ou groupes d'articles taxables.

# Appendix 6

## INTERNATIONAL RETAIL PRICE COM-PARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price level are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these items by means of benefits separate from those regu-

# Appendice 6

#### COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créé. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10 % au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5 % à 12.4 % supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas prix au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par

lated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial interprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price

des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la revision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé

relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisions. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada. de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

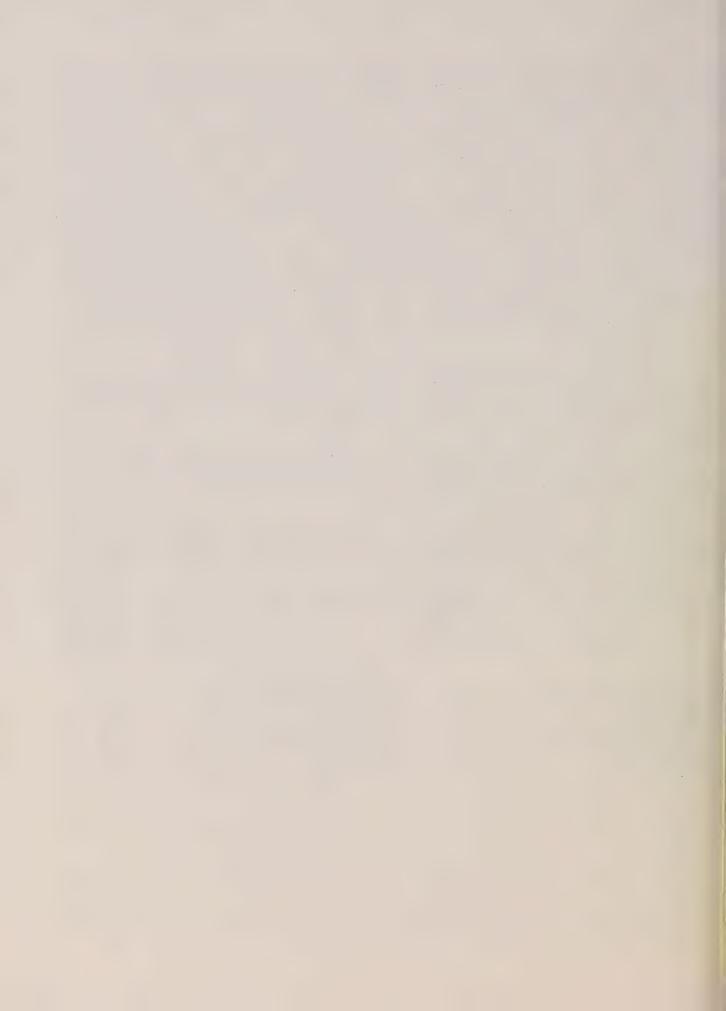

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au points en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer jusqu'au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada.

# Symbols

The following standard symbols are used in Statistics Canada publications:

- . . figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- - amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

#### NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification number, by which data may be retrieved from CANSIM, are given in the headings of the relevant series shown in the publication. For further information on CANSIM call (613) 995-7406 or write Chief, Current Economic Analysis Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

# Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- - nombres infimes.

P nombres provisoires.

- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

#### **NOTE CONCERNANT CANSIM**

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 995-7406 ou écrire au chef, Division des analyses de conjoncture, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A 0T6.

# Introduction

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, *The Consumer Price Index*, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements for each of the three months in the reference quarter, at both the urban Canada and the regional cities' level. This is presented in the form of descriptive analysis supported by tabular and graphic information.

Part II provides a detailed historical summary of monthly consumer price index movements in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Place-to-place comparative retail price information forms Part III of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 to 6 present background information relating to place-to-place retail price comparisons.

# Introduction

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, L'indice des prix à la consommation, nº 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation de chaque mois du trimestre pour le Canada et les agglomérations urbaines. Ces informations sont présentées sous la forme d'analyses descriptives appuyées de tableaux et de graphiques.

La partie II fournit un résumé historique détaillé des mouvements mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagrégé.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie III de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices des différences des prix de détail entre les villes.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contient les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthodologie des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 à 6 fournit des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

Part I

Current Consumer Price Indexes

Partie I

Indices des prix à la consommation courants

#### Canada

The All-items Consumer Price Index for Canada ( $1971 \approx 100$ ) increased by 0.8% from a level of 190.6 in June to 192.1 in July. As a result, the 12-month rise between July 1978 and July 1979 stood at 8.1%, down from the 8.9% registered in the previous 12-month period. Higher Food prices and increased Transportation costs and Housing charges were responsible for most of the increase. The Food index advanced by 1.7%, up significantly from the monthly gains of approximately 0.5% registered in each of the previous two months. The All-items excluding Food index advanced by 0.6%, up slightly from the 0.5% registered in the previous month.

The Food at Home index, which had exhibited considerable moderation in the rates of price increase in the previous two months, advanced by 2.0% in July and accounted for most of the 1.7% increase in the Food index. Higher prices for most fresh fruit and vegetable items, especially for apples and potatoes, were largely responsible for the increase in the Food at Home index. Higher prices were also recorded for selected beef cuts, most dairy, cereal and bakery products and for eggs. The current monthly increase in the Food at Home index brought this index to a level 8.7% above its July 1978 level. The Food Away from Home index rose by 0.5% in July, resulting in an increase of 13.3% over its level in July 1978.

Higher prices for new North American model cars and for gasoline along with increased shelter and household operation charges were largely responsible for the 0.6% increase in the Allitems excluding Food index. Other notable contributors included increased automobile maintenance charges, higher seasonal hotel and motel accommodation rates and increased dental care charges. Prices declined for selected women's wear items. Between July 1978 and July 1979, the index for All-items excluding Food advanced by 8.3%, up marginally from the 8.1% registered in the previous 12-month period.

Viewed in terms of goods and services, the price level for goods, including food, advanced by 0.9% in this month, while that for services increased by 0.6%. As a result, between July 1978 and July 1979, the price level for goods advanced by 8.8% while that for services rose by 7.3%.

On a seasonally-adjusted basis, the All-items Consumer Price Index rose by 0.6% between June and July; this comprised a 0.7% increase in the Food index and a 0.6% increase in the All-items excluding Food index.

#### City Highlights

Between June and July, consumer prices rose in all 15 cities for which CPI's are produced. Advances ranged from 0.6% registered in both Toronto and Vancouver to 1.2% observed in St. John's, Montréal and Saskatoon. The varying rates of price movement for food, especially for beef and fresh fruit and vegetables, largely accounted for the differing rates of overall price change among cities.

#### **JUILLET 1979**

#### Canada

L'indice d'ensemble des prix à la consommation pour le Canada (1971 = 100) a augmenté de 0.8 %, passant de 190.6 en juin à 192.1 en juillet. En conséquence, la hausse sur 12 mois, soit de juillet 1978 à juillet 1979, se chiffre à 8.1 %, contre 8.9 % pour la période allant de juin 1978 à juin 1979. La progression globale de l'IPC au cours du mois observé résulte principalement du renchérissement des aliments, de la majoration des frais de transport et de la hausse des frais d'habitation. L'indice des aliments a augmenté de façon sensible par rapport aux hausses d'environ 0.5 % enregistrées au cours des deux mois précédents, pour s'établir à 1.7 %. L'indice d'ensemble sans les aliments a crû de 0.6 %, ce qui est légèrement supérieur au chiffre de 0.5 % observé en juin.

L'indice des prix des aliments consommés à la maison, dont la progression avait été plutôt modérée au cours des deux mois précédents, a augmenté de 2.0 % en juillet et est le grand responsable de la hausse de 1.7 % de l'indice des aliments. L'augmentation de l'indice des prix des aliments consommés à la maison est surtout attribuable à la hausse de prix de la plupart des fruits et légumes frais, en particulier les pommes et les pommes de terre. Les prix de certains morceaux de boeuf, de la plupart des produits laitiers, céréaliers et de boulangerie, ainsi que des oeufs, ont également augmenté. Étant donné cette dernière hausse, l'indice des prix des aliments consommés à la maison a grimpé de 8.7 % par rapport au niveau atteint en juillet 1978. L'indice des prix des aliments consommés à l'extérieur a progressé de 13.3 % sur la même période, suite à l'augmentation de 0.5 % enregistrée en juillet.

La majoration des prix des nouvelles voitures nord-américaines, ainsi que de l'essence, et la hausse des frais de logement et des dépenses de ménage sont les grands responsables de l'augmentation de 0.6 % de l'indice d'ensemble sans les aliments. Ont également crû de façon appréciable les frais d'entretien des voitures, les tarifs saisonniers de l'hébergement et les soins dentaires. Les prix de certains articles vestimentaires pour femmes ont baissé. De juillet 1978 à juillet 1979, l'indice d'ensemble sans les aliments a progressé de 8.3 %, ce qui représente une faible hausse par rapport au chiffre de 8.1 % observé de juin 1978 à juin 1979.

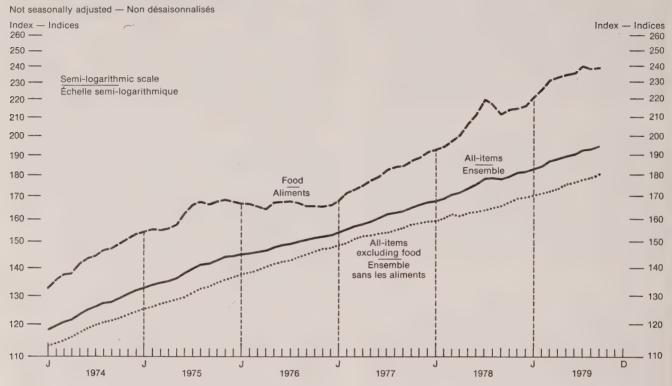

Du point de vue des biens et services, les prix des biens, y compris les aliments, ont monté de 0.9 % au cours du mois, tandis que ceux des services ont progressé de 0.6 %. Le niveau des prix s'est donc élevé de 8.8 % pour les biens et de 7.3 % pour les services de juillet 1978 à juillet 1979.

Après désaisonnalisation, l'indice d'ensemble des prix à la consommation a progressé de  $0.6\,\%$  entre juin et juillet, sous l'effet conjugué d'une hausse de  $0.7\,\%$  de l'indice des aliments et de  $0.6\,\%$  de l'indice d'ensemble sans les aliments.

#### Points saillants des indices des villes

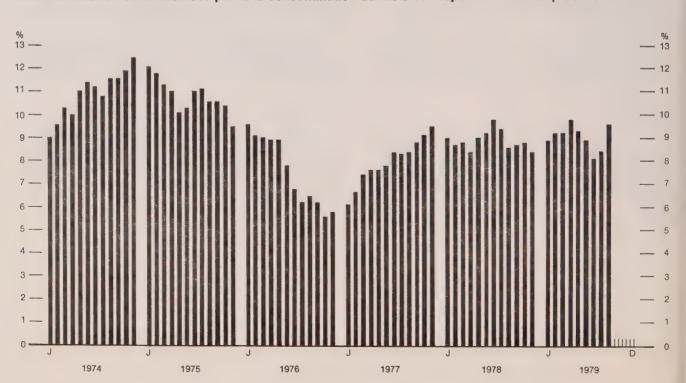

Entre juin et juillet, les prix à la consommation ont augmenté dans les 15 villes pour lesquelles on produit un IPC. Les taux varient de 0.6 % à Toronto et Vancouver à 1.2 % pour St. John's (T.-N.), Montréal et Saskatoon. Les aliments, surtout le boeuf et les fruits et légumes frais, sont les principaux responsables de la variation des mouvements des prix entre les villes.

#### **AUGUST 1979**

#### Canada

The All-items Consumer Price Index for Canada (1971 = 100) increased 0.4% from a level of 192.1 in July to 192.8 in August, the smallest recorded monthly increase since December 1978. As a result, the 12-month rise between August 1978 and August 1979 stood at 8.4%, up slightly from the 8.1% registered in the previous 12-month period. The deceleration in the overall monthly CPI rise was attributable to the Food index which, after recording an increase of 1.7% in July, declined by 0.7% in August. The All-items excluding Food index advanced by 0.7%, up slightly from the 0.6% registered in the previous month.

Lower prices for fresh vegetables and beef, down 20.9% and 2.2% respectively on average between early July and early August, were largely responsible for the 1.0% decline in the Food at Home index. The decline in fresh vegetable prices reflected the seasonal availability of local produce. The impact of these price decreases was somewhat dampened by higher prices for fresh fruit, especially apples and for selected bakery and dairy products, coffee and sugar. The current monthly decline in the Food at Home index brought this index to a level 9.8% above its August 1978 level. The Food away from Home index rose by 0.8% in August, resulting in an increase of 11.9% over its level in August 1978.

Higher Housing charges, especially for rented accommodation in the province of Québec, along with increased Clothing prices, in particular for selected women's wear items and for footwear, were largely responsible for the 0.7% increase in the All-items excluding Food index. Other notable contributors included higher prices for new North American model cars and for gasoline, increased automobile insurance rates, especially in the province of Ontario and higher prices for alcoholic beverages consumed in licensed premises. Increases in prices were also recorded for both men's haircuts and women's hairdressing services. Between August 1978 and August 1979, the index for All-items excluding Food advanced by 8.3%, unchanged from the increase registered in the previous 12-month period.

Viewed in terms of goods and services, the price level for goods including food, advanced by 0.2% in this month, while that for services increased by 0.6%. As a result, between August 1978 and August 1979, the price level for goods advanced by 9.4% while that for services rose by 7.3%.

On a seasonally-adjusted basis, the All-items Consumer Price Index rose by 0.5% between July and August; this comprised a 0.5% decline in the Food index and a 0.8% increase in the All-items excluding Food index.

#### City Highlights

Between July and August, consumer prices rose in all cities for which CPI's are produced with the exception of Winnipeg and Edmonton where declines of 0.2% and 0.1% respectively were recorded. Among the other 13 cities, advances ranged from 0.1% in both Ottawa and Saskatoon to 1.0% in Québec City. Factors contributing to the differing rates of price change among cities included the varying rates of change for housing charges and clothing prices. As well, in contrast to the other cities, beef prices rose in Québec City and Montréal while gasoline prices declined in Winnipeg.

#### **AOÛT 1979**

#### Canada

L'indice d'ensemble des prix à la consommation pour le Canada (1971 = 100) a augmenté de 0.4 %, passant de 192.1 en juillet à 192.8 en août, soit la plus faible augmentation mensuelle enregistrée depuis décembre 1978. En conséquence, la progression sur 12 mois, d'août 1978 à août 1979, se chiffre à 8.4 %, légèrement en hausse sur celle de 8.1 % enregistrée de juillet 1978 à juillet 1979. Le ralentissement de la croissance de l'IPC mensuel d'ensemble est attribuable à l'indice des prix des aliments qui, après une augmentation de 1.7 % en juillet, a diminué de 0.7 % en août. L'indice d'ensemble sans les aliments a grimpé de 0.7 %, contre 0.6 % le mois précédent.

Le fléchissement des prix des légumes frais et du boeuf, respectivement de 20.9 % et de 2.2 % en moyenne entre le début juillet et le début août, est principalement responsable du recul de 1.0 % de l'indice des aliments consommés à la maison. La production saisonnière locale des légumes frais a entraîné une baisse de leurs prix. Toutefois, l'effet de ces baisses a été atténué par le renchérissement des fruits frais, en particulier des pommes, de certains produits laitiers et de boulangerie, du café et du sucre. Compte tenu de la baisse observée au cours du mois d'août, l'indice des aliments consommés à la maison a grimpé de 9.8 % par rapport au niveau atteint en août 1978. L'indice des aliments consommés à l'extérieur a progressé de 0.8 % en août, ce qui représente une augmentation de 11.9 % sur le niveau relevé en août 1978.

Les frais d'habitation, surtout pour les logements loués dans la province de Québec, ainsi que les prix des vêtements, particulièrement ceux de certains vêtements pour femmes et ceux des chaussures, sont les principaux responsables de la progression de 0.7% de l'indice d'ensemble sans les aliments. Parmi les autres facteurs importants, signalons les nouvelles voitures fabriquées en Amérique du Nord, l'essence, les tarifs d'assurance-automobile, particulièrement en Ontario, ainsi que les boissons alcoolisées consommées dans les débits. On a également enregistré une montée des prix dans les salons de coiffure pour hommes et pour femmes. Entre août 1978 et août 1979, l'indice d'ensemble sans les aliments a progressé de 8.3 %, soit au même rythme qu'entre juillet 1978 et juillet 1979.

Du point de vue des biens et services, les prix des biens, y compris les aliments, ont monté de  $0.2\,\%$  au cours du mois, tandis que ceux des services ont progressé de  $0.6\,\%$ . Le niveau des prix s'est donc élevé de  $9.4\,\%$  pour les biens et de  $7.3\,\%$  pour les services d'août  $1978\,$  à août  $1979\,$ 

Après désaisonnalisation, l'indice d'ensemble des prix à la consommation a progressé de  $0.5\,\%$  de juillet à août, sous l'effet d'une baisse de  $0.5\,\%$  de l'indice des prix des aliments et d'une augmentation de  $0.8\,\%$  de l'indice d'ensemble sans les aliments.

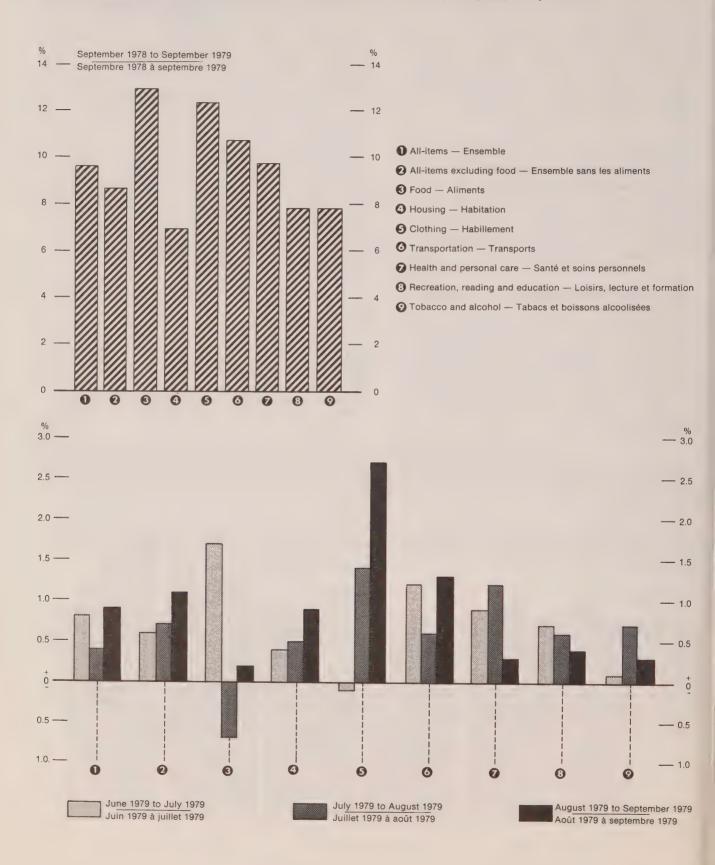

#### Points saillants des indices des villes

De juillet à août, les prix à la consommation ont augmenté dans toutes les villes pour lesquelles ont produit un IPC, à l'exception de Winnipeg et Edmonton où l'on a observé des baisses respectives de 0.2 % et de 0.1 %. En ce qui concerne les 13 autres villes, la hausse s'échelonne de 0.1 % à Ottawa et Saskatoon, à 1.0 % à Québec. Parmi les facteurs contribuant aux variations des mouvements de prix entre les villes, on note les mouvements des frais d'habitation et des prix des vêtements. On remarque aussi que, contrairement à ce qui s'est passé dans les autres villes, les prix du boeuf ont grimpé dans les villes de Montréal et Québec, tandis que le prix de l'essence diminuait à Winnipeg.

Figure III

# Percentage Change in the Consumer Price Index and its Major Components

Taux de variation de l'indice des prix à la consommation et de ses principales composantes

#### SEPTEMBER 1979

#### Canada

#### National Highlights

The All-items Consumer Price Index for Canada (1971=100) increased by 0.9% from a level of 192.8 in August to 194.5 in September. As a result, the 12-month rise between September 1978 and September 1979 stood at 9.6%, up from the 8.4% registered in the previous 12-month period. The acceleration in the overall monthly CPI rise was largely attributable to the All-items excluding Food index which increased by 1.1% in September, up from the 0.7% registered in the previous month. The Food index, after recording a decline of 0.7% in August, advanced by 0.2% in the latest month.

Lower prices for fresh fruit and vegetables, down 6.2% and 20.7% respectively on average between early August and early September, offset price increases for most other food items, with the result that the Food at Home index registered no change from the level recorded in August. The decline in fresh fruit and vegetable prices reflected the seasonal availability of local produce. Offsetting the impact of these price declines were higher prices for beef, dairy products and coffee. In September, the Food at Home index stood 13.1% above its level in September 1978. The Food away from Home index rose by 0.6% in September, resulting in an increase of 12.0% over its level in September 1978.

Higher fuel oil and gasoline prices, coupled with increased clothing prices, especially for selected seasonal women's wear items, were largely responsible for the 1.1% increase in the Allitems excluding Food index. Increased charges for rented and owned accommodation and, in several cities, for electricity, domestic gas and for local transit and taxi fares were also recorded. Dampening the impact of these increases were seasonally lower air fares on selected routes along with reduced prices on selected new 1979 North American model cars. Between September 1978 and September 1979, the index for All-items excluding Food advanced by 8.6%, up from the 8.3% increase registered in the previous 12-month period.

Viewed in terms of goods and services, the price level for goods, including food, advanced by 1.2% in this month, while that for services increased by 0.4%. As a result, between September 1978 and Sepetmber 1979, the price level for goods advanced by 11.2% while that for services rose by 7.3%.

On a seasonally-adjusted basis, the All-items Consumer Price Index rose by 1.1% between August and September; this comprised a 1.2% increase in the Food index and a 1.1% increase in the All-items excluding Food index.

#### City Highlights

Between August and September, consumer prices rose in all cities for which CPI's are produced with increases ranging from 0.6% in Thunder Bay to 1.2% in both Montréal and Winnipeg. In five of the 15 cities, consumer prices rose by 1.0% or more. Factors contributing to the differing rates of price change among cities included varying rates of change for Food prices and Housing charges. As well, local transit and taxi fares rose in Montréal, while in Winnipeg gasoline prices increased significantly more than those in other cities. The reduction in new 1979 North American model car prices and in selected air fares affected all cities.

#### SEPTEMBRE 1979

#### Canada

#### Points saillants de l'indice national

L'indice d'ensemble des prix à la consommation pour le Canada (1971=100) a progressé de 0.9 %, ayant passé de 192.8 en août à 194.5 en septembre. En conséquence, l'augmentation sur 12 mois, de septembre 1978 à septembre 1979, se chiffre à 9.6 %, en hausse sur celle de 8.4 % enregistrée d'août 1978 à août 1979. L'accélération de la progression de l'IPC mensuel d'ensemble est attribuable, dans une large mesure, à l'indice d'ensemble sans les aliments, qui a grimpé de 1.1 % en septembre, contre 0.7 % en août. L'indice des prix des aliments, après avoir reculé de 0.7 % en août, a avancé de 0.2 % en septembre.

Le fléchissement des prix des fruits et légumes frais, respectivement de 6.2 % et de 20.7 % en moyenne entre le début août et le début septembre, a neutralisé le renchérissement de la plupart des autres aliments. Par conséquent, l'indice des aliments consommés à la maison n'a pas varié d'août à septembre. C'est la production saisonnière locale de fruits et de légumes frais qui a entraîné une baisse de leurs prix. Par contre, les prix du boeuf, des produits laitiers et du café ont augmenté neutralisant l'impact de cette baisse. En septembre, l'indice des aliments consommés à la maison a dépassé de 13.1 % le niveau atteint en septembre 1978. L'indice des aliments consommés à l'extérieur a progressé de 0.6 % en septembre, ce qui représente une hausse de 12.0 % sur le niveau observé en septembre 1978.

Le renchérissement du mazout et de l'essence et la majoration des prix des vêtements (surtout de certains vêtements saisonniers pour femmes) ont été les principaux responsables de l'accroissement de 1.1 % de l'indice d'ensemble sans les aliments. On a également enregistré une progression des frais de logement en location et en propriété et, dans plusieurs villes, de l'électricité, du gaz domestique, du transport en commun et du taxi. La baisse saisonnière des tarifs de certaines liaisons aériennes et la diminution des prix des modèles 1979 de certaines voitures nord-américaines ont atténué l'incidence de ces augmentations. Entre septembre 1978 et septembre 1979, l'indice d'ensemble sans les aliments a grimpé de 8.6 %, contre 8.3 % d'août 1978 à août 1979.

Du point de vue des biens et services, les prix des biens, y compris des aliments, ont monté de 1.2 % au cours du mois, tandis que ceux des services ont progressé de 0.4 %. Le niveau des prix s'est donc élevé de 11.2 % pour les biens et de 7.3 % pour les services entre septembre 1978 et septembre 1979.

Après désaisonnalisation, l'indice d'ensemble des prix à la consommation s'est haussé de  $1.1\,\%$  d'août à septembre, sous l'effet d'une augmentation de  $1.2\,\%$  de l'indice des prix des aliments et de  $1.1\,\%$  de l'indice d'ensemble sans les aliments.

#### Points saillants des indices des villes

D'août à septembre, les prix à la consommation ont augmenté dans toutes les villes pour lesquelles on produit un IPC, la hausse s'échelonnant de 0.6 % à Thunder Bay à 1.2 % à Montréal et à Winnipeg. Dans cinq des 15 villes, les prix à la consommation ont crû d'au moins 1.0 %. Parmi les facteurs contribuant aux variations des mouvements de prix entre les villes, on note les prix des aliments et les frais d'habitation. On remarque aussi que le tarif du transport en commun et du taxi a progressé à Montréal, tandis que le renchérissement de l'essence a été sensiblement plus fort à Winnipeg qu'ailleurs. Le recul des prix de certaines voitures neuves nord-américaines et de certains tarifs aériens s'est fait sentir dans toutes les villes.

#### July, August and September - In Retrospect

The All-items Consumer Price Index for Canada (1971=100) increased 2.0% in the third quarter 1979, rising from a level of 190.6 in June to 194.5 in September. This latest increase was marginally slower than the 2.1% registered in the second quarter, 1979. In the corresponding third quarter, 1978, the index rose 1.4%.

Higher housing charges advanced 1.8% in the third quarter and accounted for close to one third of the quarterly increase in the All-items index. Increased Transportation costs and higher clothing prices, up 3.1% and 4.0% respectively, together accounted for an additional two fifths of the total change in the third quarter.

The rise in food prices decelerated to 1.2% in the third quarter after registering increases of 7.0% and 2.0% in the first and second quarters respectively. Higher prices for beef, pork, selected dairy and bakery products, eggs, fresh fruit, coffee and restaurant meals have been largely responsible for the price advance in the third quarter. A major proportion of these increases was offset by lower seasonal prices for fresh vegetables and, to a much lesser extent, by lower poultry prices.

The third quarter increase in the All-items excluding Food index of 2.3% also represents an acceleration from the 1.8% and the 2.1% registered in the first and second quarters respectively. A significant portion of the latest quarterly increase resulted from higher energy prices, up 5.8%, with gasoline prices rising by 8.7% and fuel oil prices by 8.6%. Other notable non-food price advances were noted for shelter, selected women's and men's wear items including footwear, automobiles, local transit fares, automobile insurance premiums, some recreational items, and alcoholic beverages consumed in licensed premises.

In the 12-month period, September 1978 to September 1979, the All-items CPI rose 9.6% comprising a 12.9% increase in the Food index and an 8.6% increase in the All-items excluding Food index. These latest advances correspond with 12-month increases ending September 1978 of 8.6% in the All-items index, 14.8% in the Food index and 6.2% in the All-items excluding Food index.

#### Juillet, août et septembre - En rétrospective

L'indice d'ensemble des prix à la consommation du Canada (1971 = 100) a progressé de 2.0 % au cours du troisième trimestre de 1979, passant de 190.6 en juin à 194.5 en septembre. Cette hausse constitue un léger recul par rapport à celle de 2.1 % enregistrée au deuxième trimestre. Par ailleurs, l'indice avait augmenté de 1.4 % pendant le trimestre correspondant de 1978.

Les frais d'habitation, en hausse de  $1.8\,\%$ , sont responsables pour près du tiers de la progression de l'indice d'ensemble pendant le trimestre. Le coût des transports et les prix des vêtements ont augmenté respectivement de  $3.1\,\%$  et de  $4.0\,\%$ ; ensemble, ils ont figuré pour les deux cinquièmes de la variation trimestrielle totale.

Les prix des aliments ont ralenti leur poussée (1.2%), après avoir connu des hausses de 7.0% au premier trimestre et de 2.0% au deuxième. Le renchérissement du boeuf, du porc, de certains produits laitiers et de boulangerie, des oeufs, des fruits frais, du café et des repas pris à l'extérieur est le principal responsable de la montée des prix observée au troisième trimestre. Celle-ci a toutefois été atténuée pour une bonne part par la baisse des prix saisonniers des légumes frais et quelque peu par celle des prix de la volaille.

L'indice d'ensemble sans les aliments a augmenté de 2.3 % au troisième trimestre, poursuivant la tendance haussière du premier et du deuxième trimestres, respectivement de 1.8 % et de 2.1 %. La hausse du dernier trimestre a été imputable, en grande partie, à la poussée de 5.8 % des prix de l'énergie, les prix de l'essence étant majorés de 8.7 % et ceux du mazout de 8.6 %. Parmi les articles non alimentaires qui ont connu des augmentations appréciables, notons le logement, certains articles vestimentaires pour femmes et pour hommes dont les chaussures, les automobiles, les tarifs du transport local en commun, les primes d'assurance-automobile, certains articles récréatifs et les boissons alcoolisées consommées dans les débits de boissons.

Au cours de la période allant de septembre 1978 à septembre 1979, l'IPC d'ensemble a progressé de 9.6 %, comprenant une hausse de 12.9 % de l'indice des aliments et de 8.6 % de l'indice d'ensemble sans les aliments. Ces augmentations se rapprochent de la progression de 8.6 % de l'indice d'ensemble, de 14.8 % de l'indice des aliments et de 6.2 % de l'indice d'ensemble sans les aliments enregistrée au cours de la période de douze mois se terminant en septembre 1978.

For some elaboration of methodology, see Appendix 1. — Pour de plus amples détails sur la méthodologie, consulter appendice 1.

For an explanation of the non-availability of data previous to October 1978, see Appendix 3, Section B(2). — Une explication de l'absence de données pour la période précédant octobre 1978 es trouve à la section B(2) de l'appendice 3.

Seasonally adjusted data are revised annually using updated seasonal adjustment factors. For more information, refer to Appendix 3. Les données désaisonnalisées sont révisées annuellement afin d'introduire des facteurs de désaisonnalisation plus récents. Pour de plus amples renseignements, voir appendice 3. (3)

As of October 1978 indexes are based on 1974 expenditure weights and are linked to their predecessor at September 1978. For further explanation see "Notes on the Consumer Price Index". Appendix I.—A partir d'octobre 1978 les indices sont calculés à l'aide des pondérations fondées sur les dépenses de 1974 et sont raccordés aux indices précédents en septembre 1978. Pour de plus amples renseignements voir les "Notes sur l'indice des prix à la consommation" Appendice 1. 1974=100 Reconstructed series.—Séries reconstruites. Includes gasoline, motor oil, domestic gas, fuel oil and electricity.—Comprend l'essence, l'huile à moteur, le gaz domestique, le mazout et l'électricité.

# TABLEAU 9. Indices des prix à la consommation dans les agglomérations urbaines(1.2)

(unless otherwise indicated -1971 = 100 sauf indication contraire)

The Consumer Price Index for All-items and seven major components by cities have been revised with the release of data for October 1978 to correct for methodological differences in the construction of the Canada and city series. For further details see, The Consumer Price Index, Revision based on 1974 Expenditures Concepts and Procedures, (occasional) Catalogue 62-546. L'indice d'ensemble des prix à la consommation et ses sept composantes principales par ville, ont été révisés avec l'emission d'octobre 1978 afin de tenir compte des différences méthodologiques qui existaient pour la construction des séries du Canada et des villes. Pour de plus amples informations voir, l'Indice des prix à la consommation. révision fondée sur les dépenses de 1974 concepts et procedés (hors-série) no. 62-56 au catalogue.

These indexes measure the percentage change in consumer prices within each city, from the base year to each subsequent time period. They do not compare price levels between cities; for inter-city indexes of retail prices differentials, refer to Appendix 5 of this publication. — Ces indices mesurent la variation en pourcentage des prix à la consommation dans chaque ville par rapport à l'année de base. Ils ne comparent pas les niveaux des prix d'une ville à l'autre; pour les indices comparatifs des prix de détail, se reporter à l'appendice 5 de cette publication.

1974 = 100

For explanatory notes and detailed item specifications see Appendix 4. In some cases, blanks appear in this table where the quality and (or) quantity of the prices were insufficient to produce a good average. In other cases, the price volatility of certain items and the methodology for calculating updated average prices do not permit their publication. See Section 4 of Appendix 4 for further explanation.

Converted from one quart to one litre for most cities of the province of Ontario.

Saint John (N.B.), Halifax, Regina, Saskatoon, Edmonton, Calgary (20 ounces). St. John's (Nfld.), Montréal, Ottawa, Toronto, Thunder Bay, Winnipeg, Vancouver (24 ounces). Québec City (32 ounces).

Pour de plus amples renseignements et détails sur les spécifications des articles consulter l'appendice 4.

Nous avons laissé les espaces en blanc dans ce tableau lorsque la qualité et (ou) la quantité des prix relevés ne nous a pas permis d'établir des moyennes fiables et, dans d'autres cas, lorsque l'instabilité des prix des articles et la méthodologie pour mettre à jour les moyennes de prix ne nous permettaient pas de les publier. Voir la section 4 de l'appendice 4 pour une explication additionnelle.

Le prix d'une pinte converti à un litre dans la plupart des villes de l'Ontario.

Saint John (N.-B.), Halifax, Regina, Saskatoon, Edmonton, Calgary (20 onces). St. John's (T.-N.), Montréal, Ottawa, Toronto, Thunder Bay, Winnipeg, Vancouver (24 onces). Québec (32 onces).

| (1) | For explanatory notes see Appendix 5.              |   |   |               |         |   |          |  |

For explanatory notes see Appendix 5.

The weights shown are rounded 1974 weights as contained in the report *The Consumer Price Index Revision Based on 1974 Expenditures*, Concepts and Procedures, Occasional (Statistics Canada, Catalogue 62-546). They are provided for illustration only: the weights actually used are combined cities weights with adjustments for price change since 1974.

Pour de plus amples renseignements, voir appendice 5. Les poids indiqués sont les poids pour 1974 figurant dans *L'indice des prix à la consommation Révision fondée sur les dépenses de 1974*, Concepts et Procédés, Hors série (no 62-546 au catalogue de Statistique Canada). Ils ne sont présentés qu'à titre documentaire; les poids utilisés en fait sont le poids des villes combinées ajustés en fonction des variations des prix observées depuis 1974.

Appendices

Appendices

# Appendix 1

### THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to price movements.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the movement of prices in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of grocery items are published separately in Appendix 3, Section C.

### Coverage

Beginning with October 1978, the weights used in the Consumer Price Index are those pertaining to 1974 expenditure patterns. Data used for establishing these patterns were obtained through the 1974 Family Expenditure Surveys. The expenditures are those reported by all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. The 1971 Census of Canada revealed 59 such urban centres.

Separate CPI's are published for 15 of these centres which, together, accounted for approximately 70% of the total 1974 current consumption expenditures reported in the 59 centres. These 15 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 400 commodities are priced in each of these 15 cities while in the remaining 44 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

### **Prices**

The prices used in the calculation of the CPI are retail prices inclusive of all sales, excise and other

# Appendice 1

# L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement du mouvement des prix.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le mouvement des prix dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles d'épicerie sont publiées à part dans l'appendice 3, section C.

### Champ d'observation

À compter d'octobre 1978, les pondérations utilisées pour l'indice des prix à la consommation se rapportent aux schémas des dépenses de 1974. Les données qui ont servi à établir ces schémas proviennent des Enquêtes sur les dépenses des familles de 1974. Les dépenses sont celles qu'ont déclarées tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. Selon le recensement du Canada de 1971, ces centres urbains sont au nombre de 59.

Des IPC distincts sont publiés pour 15 centres qui, ensemble, interviennent pour près de 70 % du total des dépenses courantes de consommation déclarées en 1974 par les 59 centres. Les 15 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 400 produits dans chacune des 15 villes; ce nombre est plus faible dans les 44 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

#### Prix

Les prix servant au calcul de l'IPC sont les prix au détail et englobent toutes les taxes de vente, d'accise et autres taxes

taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected in judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

# Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically revised. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods. For the period April 1973 to September 1978, the 1967 family expenditure patterns (and within the food component, the 1969 detailed spending patterns) were used, while for October 1978 forward, the indexes are based on the 1974 expenditure patterns.

### Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont révisées périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes. Entre avril 1973 et septembre 1978, les habitudes des dépenses des familles de 1967 ont servi à établir les pondérations (les pondérations internes de la composante alimentation, sont basées sur les habitudes des dépenses détaillées de 1969) tandis qu'à partir d'octobre 1978, l'indice est calculé d'après les habitudes des dépenses de 1974.

<sup>1</sup> Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

These weights represent expenditures in 1974 (1974 quantities valued in 1974 prices) and in 1967 (1967 quantities valued in 1967 prices). They cannot be used to reconstruct or reaggregate indexes on a 1971=100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the address shown below.

The indexes based on 1974 weights were linked or connected in September 1978 to the appropriate indexes based on 1967 weights which had been in use since May 1973. This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level of an aggregate index to fall slightly outside the range of its component indexes.

#### Time Base

The Consumer Price Index for Canada and each index city is expressed in terms of 1971=100, except for Charlottetown - Summerside and for certain items, as noted, where the pricing survey was introduced in more recent years.

#### **Current Annual Rate of Change**

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 3 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level and raising it to an annual rate (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", Retail Prices and Living Costs — Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

#### Reconstructed Indexes

With the release of the October 1978 Consumer Price Index, certain series were reconstructed historically to reflect more closely the Standard Commodity Classification system and the Family Expenditure categories of Statistics Canada. For further details see The Consumer Price Index Revision Based on 1974 Expenditures, Concepts and Procedures (Occasional) Catalogue 62-546.

#### **Revised City Indexes**

With the release of the October 1978 Consumer Price Index, certain city indexes were revised historically to correct for methodological differences which Ces pondérations représentent les dépenses en 1974 (quantités et prix de 1974) et en 1967 (quantités et prix de 1967). Elles ne peuvent servir à reconstituer ni à composer des indices sur la base de 1971=100. La méthode à suivre pour une telle reconstitution peut être obtenue sur demande auprès de la section dont l'adresse est donnée plus loin.

Les indices fondés sur les pondérations de 1974 ont été enchaînés ou raccordés en septembre 1978 aux indices correspondants fondés sur les pondérations de 1967, en usage depuis mai 1973. Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, l'indice composé pourrait ainsi dépasser légèrement l'étendue des indices de ces composantes.

#### Période de base

L'indice des prix à la consommation du Canada et de chaque ville est exprimé sur la base de 1971=100, sauf pour Charlottetown-Summerside et pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduit qu'au cours des années plus récentes.

#### Taux de variation annuel courant

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 3 consiste à prendre un taux de croissance composé sur le niveau désaisonnalisé des trois derniers mois et à le porter à un taux annuel (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", *Prix de détail et coût de la vie* — Bulletin de service (nº 62-005 au catalogue) vol. 4, nº 4, avril 1975.

#### Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation d'octobre 1978, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent plus fidèlement le système de la Classification type des produits et les catégories des Dépenses des Familles établis par Statistique Canada. Pour de plus amples informations voir L'Indice des prix à la consommation, Révision fondée sur les dépenses de 1974, Concepts et Procédés (hors-série), nº 62-546 au catalogue.

#### Revision des indices des villes

Avec l'émission de l'Indice des prix à la consommation d'octobre 1978, certains indices historiques des villes ont été reconstruits pour tenir compte des différences previously existed in the construction of these indexes at the Canada and city levels. For further details see *The Consumer Price Index Revision Based on 1974 Expenditures, Concepts and Procedures* (Occasional) Catalogue 62-546.

# Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in *The Consumer Price Index Revision Based on 1974 Expenditures, Concepts and Procedures* (Occasional), Catalogue 62-546. Information regarding the Family Expenditure Survey is contained in the *Urban Family Food Expenditure Survey, 1974*, Catalogue 62-542, and *Urban Family Expenditure Survey, 1974*, Catalogue 62-544.

méthodologiques qui existaient au niveau de la construction de ces indices entre le Canada et les villes. Pour de plus amples informations voir *L'Indice des prix*, révision fondée sur les dépenses de 1974, Concepts et Procédés (hors-série), nº 62 - 546 au catalogue.

# Renseignements supplémentaires et publications connexes

L'Indice des prix à la consommation — Révision fondée sur les dépenses de 1974, Concepts et Procédés (hors-série), n° 62-546 au catalogue, décrit en détail les méthodes et concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se trouvent dans Dépenses alimentaires des familles urbaines, 1974, n° 62-542 au catalogue, et Dépenses des familles urbaines, 1974, n° 62-544 au catalogue.

## Appendix 2

# THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1975, compared with their average level in 1971, consumer prices as measured by the CPI were 32.4% higher, so that an equivalent basket of goods and services which could be purchased for \$100 in 1971 would cost the consumer \$132.40 in January 1975. Each consumer dollar in January 1975, therefore, buys less than in 1971 and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1975 the purchasing power of the 1971 consumer dollar declined to approximately 76 cents (\$1.00 x 100.00/132.4 = \$0.76).

Users of the tabulation which shows the purchasing power of the 1971 consumer dollar at different points in time (Table 5) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the CPI relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the CPI, it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

## Appendice 2

#### LE POUVOIR D'ACHAT DU DOLLAR DE CON-SOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1975, par rapport au niveau de 1971, les prix à la consommation mesurés par l'IPC avaient progressé de 32.4 %, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1971 aurait coûté \$132.40 en janvier 1975 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1975 achète moins qu'en 1971 et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1975, le pouvoir d'achat du dollar de consommation de 1971 était tombé approximativement à 76 cents (\$1.00 x 100.00/132.4 = \$0.76).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1971 à différentes périodes (tableau 5) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'IPC pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence different sensiblement. Il faut également noter que, tout comme l'IPC il n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

## Appendix 3

# SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences, social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then returns to its original level. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement in one direction over a long period. It reflects continuing rather than changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the subject. Rather than reiterating those texts, an outline of the methodology employed by

# Appendice 3

#### LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, puis revient à son niveau initial. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable orienté dans une même direction sur une longue période. Elle reflète la continuité de l'économie plutôt que l'évolution des facteurs économiques.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la question<sup>1</sup>. Au lieu d'en reprendre ici le contenu, nous présentons cidessous les grandes lignes de la méthode utilisée à Statistique

<sup>&</sup>lt;sup>1</sup> For example, Julius Shiskin and Harry Eisenpress, "Seasonal Adjustments by Electronic Computer Methods", Technical Paper 12, National Bureau of Economic Research, New York, 1958.

Statistics Canada – U.S. Bureau of Census X-11 Seasonal Adjustment Program (Variant II) is provided below, followed by a description of its application to the CPI.

#### Section A

# 1. Outline Explanation of the X-11 Seasonal Adjustment Program

The X-11 Seasonal Adjustment Program is based on a ratio-to-moving-average methodology.

The first step in the ratio-to-moving-average method is to compute a centered 12-term moving average (a 2-term average of a 12-term moving average). This average eliminates a stable seasonal pattern and irregular fluctuations and reproduces exactly a linear trend. The raw data are then divided by this moving average; since both contain the trend-cycle component. division leaves, essentially, only the seasonal and irregular components. Estimates of the seasonal adjustment factors are then obtained by averaging the seasonal-irregular ratios for successive Januaries, Februaries, etc., so that the irregular factor is largely cancelled out by the averaging procedures. Once the seasonal variations are thus roughly identified, they are eliminated from the original observations by dividing these observations by the seasonal adjustment factors, resulting in a series that contains the trend, cycle and irregular factors, but not the seasonal factors.

The X-11 program performs several iterations of this ratio-to-moving-average procedure. Basically, three rounds of calculations are performed by the program. An outline of the first round follows:

The original series are smoothed using a centered 12term moving average to provide a preliminary estimate of the trend-cycle curve. Then, preliminary seasonalirregular ratios, seasonal factors and an irregular component are calculated. Based on the variability in the irregular component, weights are developed for each monthly value to estimate its degree of extremeness. Values outside specified upper limits receive a weight of 0.0 (totally extreme), values inside specified lower limits receive a weight of 1.0 (totally non-extreme) and values between the limits receive weights between 0.0 and 1.0 depending on their degree of extremeness. For values receiving less than full weight, the corresponding seasonal-irregular ratios are replaced with modified ratios and a second set of seasonal factors is computed. Using these factors, a first estimate of the seasonally adjusted series is

Canada, c'est-à-dire, la variante X-11 de la méthode II du *U.S. Bureau of Census* que suivra une description de son application à l'IPC.

#### Section A

# 1. Description sommaire du programme de désaisonnalisation X - 11

Le programme X-11 fait appel à la méthode du rapport à la moyenne mobile.

La première étape de cette méthode consiste à calculer une moyenne mobile centrée de 12 termes (une moyenne de 2 termes d'une moyenne mobile de 12 termes). Cette moyenne élimine la tendance saisonnière stable ainsi que les fluctuations accidentelles et reproduit exactement une tendance générale linéaire. Les données brutes sont alors divisées par la moyenne mobile. Étant donné que les deux comportent l'élément tendance-cycle, ce calcul ne laisse essentiellement que les composantes saisonnières et accidentelles. Les estimations des facteurs de désaisonnalisation s'obtiennent ensuite en prenant la moyenne des rapports des composantes saisonnières et accidentelles pour les mois de janvier, les mois de février, etc., des années successives, de sorte que le facteur accidentel est en grande partie éliminé grâce à ces procédés de mise en moyennes. Une fois les variations saisonnières ainsi isolées en gros, elles sont éliminées des observations initiales grâce à la division de ces dernières par les facteurs de désaisonnalisation, ce qui donne une série renfermant la tendance générale, le cycle et les facteurs accidentels, mais non les facteurs saisonniers.

Le programme X-11 exécute plusieurs séries de calculs de ce rapport à la moyenne mobile. Fondamentalement, il y a trois étapes de calcul. On trouvera ci-dessous les grandes lignes de la première étape:

Les séries initiales sont lissées grâce à une movenne mobile centrée de 12 termes, donnant ainsi une première estimation de la tendance-cycle. On calcule ensuite les ratios préliminaires des éléments saisonniers et accidentels, les facteurs saisonniers ainsi qu'une composante accidentelle. Compte tenu de la variabilité de la composante accidentelle, on établit des coefficients de pondération pour chaque valeur mensuelle afin d'estimer son degré de valeur extrême. Les valeurs se trouvant à l'extérieur de limites supérieures déterminées sont affectées du coefficient 0.0 (valeur extrême totale), les valeurs à l'intérieur de limites inférieures déterminées se voient affecter le coefficient 1.0 (valeur non extréme) et l'on attribue aux valeurs situées entre ces limites des coefficients de pondération compris entre 0.0 et 1.0 selon leur degré de valeur extrême. Quant aux valeurs dont la pondération est sous-représentative, leurs rapports composante saisonnière/ composante accidentelle sont remplacés par des ratios

obtained. Using a weighted Henderson moving average of this estimate of the seasonally adjusted series, a second estimate of the trend-cycle is computed. The steps above are repeated to produce a second estimate of the seasonally adjusted series and a refined estimate of the irregular component. This irregular component is then modified for extreme values and used to develop refined weights for identifying extreme values.

A second round is then performed with essentially the same computations as above, using an original series modified by the irregular weights estimated in the first round. This second round produces final estimates of the irregular weights.

Using an original series modified by the final irregular weights computed in the second round, a third and final round is performed. In this third round, final estimates are produced of the seasonal factors, seasonally adjusted series, trend-cycle and irregular components. Summary measures are computed.

#### 2. Guidelines

The guidelines employed are the standard ones developed and used in Statistics Canada. Their use assists in the judgement of the acceptability of adjusted results when applying the X-11 monthly multiplicative or additive programs. The quality assessment procedure employed exploits the X-11 summary measures (F2 tables) to yield two coefficients: the coefficient of irregularity ( $q_1$ ) and the coefficient of seasonality ( $q_2$ ). The coefficient of irregularity enables one to establish whether or not the series is sufficiently regular to permit adjustment, while the coefficient of seasonality gives the degree and significance of the seasonality present in the time series and thus indicates whether or not there is sufficient seasonality in the series to warrant its adjustment.

According to the guidelines, some of the options of the X-11 were not used, such as the trading day factors and the Easter adjustment, because they apply to "flow" time series. A "flow" can be defined as the rate of economic activity measured over a period of time. The CPI, however, measures prices at specific times during a month and therefore variations in the calendar are not a factor in the calculation of the Index.

Regarding the options for choosing sigma limits for graduating extreme values in estimating seasonal and trend-cycle components, the guidelines recommend that no specific option be applied. This suggestion was followed.

modifiés et l'on calcule un deuxième ensemble de facteurs saisonniers. À partir de ces facteurs, on obtient une première estimation de la série désaisonnalisée. En se servant d'une moyenne mobile pondérée du type Henderson de cette estimation, on calcule une seconde estimation de la tendance-cycle. On passe par les étapes mentionnées plus haut pour obtenir une seconde estimation de la série désaisonnalisée et une estimation plus élaborée de la composante accidentelle. Cette dernière est alors modifée en fonction de ses valeurs extrêmes et utilisée pour déterminer des coefficients de pondération améliorés qui identifieront les valeurs extrêmes.

La seconde phase reproduit essentiellement les mêmes calculs que ci-dessus, à partir d'une série originale modifiée par les coefficients de pondération de la composante accidentelle estimés lors de la première phase. La deuxième phase produit des estimations définitives des coefficients de pondération de la composante accidentelle.

À partir d'une série originale modifée par les coefficients de pondération définitifs de la composante accidentelle calculés lors de la deuxième phase, on procède à un troisième et dernier calcul qui consiste à produire des estimations définitives des facteurs saisonniers, des séries désaisonnalisées, de la tendance-cycle et de la composante accidentelle. On calcule ensuite des mesures récapitulatives.

#### 2. Directives

Les directives utilisées sont les directives normalisées élaborées et appliquées à Statistique Canada. Elles aident à juger de l'acceptabilité des résultats de la désaisonnalisation lorsqu'on utilise les schémas mensuels multiplicatifs ou additifs du programme X-11. La procédure d'évaluation de la qualité utilisée fait appel aux mesures récapitulatives du programme X-11 (tableaux F2) pour donner deux coefficients; le coefficient d'irrégularité  $(\mathbf{q}_1)$  et le coefficient de saisonnalité  $(\mathbf{q}_2)$ . Le premier permet de déterminer si la série est suffisamment régulière pour permettre une désaisonnalisation tandis que le coefficient de saisonnalité donne le degré et l'importance de la saisonnalité dans la série chronologique, indiquant ainsi si la saisonnalité de la série est suffisamment importante pour justifier une désaisonnalisation.

Suivant ces directives, certaines options du programme X-11 n'ont pas été utilisées, comme le facteur jours ouvrables et l'ajustement saisonnier pour Pâques, car elles s'appliquent à des séries chronologiques de "flux". On entend par "flux" le taux de l'activité économique mesuré sur une certaine période. L'IPC cependant mesure les prix à un instant donné du mois. Les variations durant l'année n'interviennent donc pas dans le calcul de l'indice.

Pour ce qui est des options liées au choix des bornes sigma dans le calcul des valeurs extrêmes lors de l'estimation de la saisonnalité et de la tendance-cycle, les directives recommandent de n'utiliser aucune option en particulier, suggestion qui a été suivie. The guidelines also suggest that wider sigma limits be considered only if more than 20% of the irregulars are treated as extremes. This suggestion was not followed due to the small number of irregulars treated as extremes.

For seasonal factor curves it is recommended that no specific option be employed. In the calculation of these curves, the Seasonal-irregular ratios for each month are smoothed by a  $3 \times 5$ -term moving average (a 3-term average of a 5-term average) to estimate final seasonal factors. Optionally, one may specify any of the following seasonal factor curves to compute final seasonal factors for any particular month: 3,  $3 \times 3$ ,  $3 \times 5$ ,  $3 \times 9$ , or n-term (where "n" is the number of years of data in a particular month; i.e., a stable seasonal). The choice of the moving average to smooth the Seasonal-irregular ratios depends on the amount of irregularity in the series.

Finally, the guidelines suggest that the appropriate moving average for the variable trend-cycle component be selected. In X-11, the moving average used to estimate the trend-cycle component is selected on the basis of the amplitude of irregular variations in the data relative to the amplitude of long-term systematic variations. A moving average is chosen that provides a suitable compromise between the need to smooth the irregular with a long-term inflexible moving average and the need to accurately reproduce the systematic element with a short-term flexible moving average. For highly irregular or very smooth series, a more appropriate average is chosen. The selection is made on the basis of a preliminary estimate of the I/C ratio (the ratio of the average absolute month-to-month change in the irregular to that in the trend-cycle). This procedure was adopted for the CPI adjustment.

#### Section B

#### 1. Seasonal Adjustment of the Revised CPI

As indicated in Appendices 1 and 2 the published official series for Canada, unadjusted for seasonal variations, is based on different expenditure weights over time. Subsequent to September 1978, the 1974 expenditure weights are in effect. These weights supersede the 1967 expenditure patterns used between April 1973 and September 1978. Prior to this, the 1957 expenditure patterns were used.

The use of different weighting systems over time necessitates the application of monthly links to a few of the CPI item indexes and to all of the aggregate Les directives recommandent également que l'on ne considère des bornes sigma plus larges que si plus de 20 % des éléments accidentels sont traités comme des extrêmes. Cette recommandation n'a pas été suivie étant donné le petit nombre de tels éléments.

En ce qui concerne les courbes des facteurs saisonniers, il est recommandé de n'employer aucune option en particulier. Dans le calcul de ces courbes, les ratios composante saisonnière/composante accidentelle pour chaque mois sont lissés par la moyenne mobile de 3 x 5 termes (une moyenne de 3 termes d'une moyenne de 5 termes) pour donner les estimations définitives des facteurs saisonniers. On peut, au choix, préciser l'une des courbes de facteurs saisonniers suivantes pour calculer les facteurs saisonniers définitifs d'un mois en particulier: 3, 3 x 3, 3 x 5, 3 x 9 ou n-termes (lorsque "n" est le nombre d'années sur lesquelles portent des données pour un mois en particulier, c.-à-d., lorsqu'il s'agit d'une saisonnalité stable). Le choix de la moyenne mobile destinée au lissage des ratios composante saisonnière/composante accidentelle dépend de l'importance de la composante accidentelle dans la série.

Les directives en question recommendent enfin de choisir la moyenne mobile appropriée pour le calcul de la composante variable tendance-cycle. Dans le programme X-11, la moyenne mobile utilisée pour estimer la composante tendancecycle est choisie en fonction de l'amplitude des variations accidentelles dans le cas des données relatives à l'amplitude des variations systématiques à long terme. On choisit une moyenne mobile qui constitue un compromis acceptable entre la nécessité de lisser la composante accidentelle grâce à une moyenne mobile rigide à long terme et la nécessité de reproduire avec précision la composante systématique grâce à une moyenne mobile souple à court terme. Pour les séries très accidentées ou très stables, on choisit une moyenne plus appropriée. On fait ce choix en fonction d'une première estimation du ratio A/C (ratio de la variation absolue moyenne mensuelle de la composante accidentelle à celle de la tendance-cycle). Cette procédure a été adoptée pour l'ajustement de l'IPC.

#### Section B

#### 1. Désaisonnalisation de l'IPC révisé

Tel qu'indiqué aux appendices 1 et 2, les séries publiées officielles du Canada, non désaisonnalisées, sont basées sur des pondérations tirées de dépenses différentes au cours du temps. Les pondérations fondées sur les dépenses de 1974 sont effectives pour la période postérieure à septembre 1978. Ces pondérations remplacent les schémas de dépenses de 1967 qui étaient utilisés entre avril 1973 et septembre 1978. Avant cette période on avait utilisé les schémas de dépenses de 1957.

L'utilisation de différents systèmes de pondération, au cours du temps, implique un raccordement mensuel pour quelques indices de l'IPC au niveau des articles et pour tous

indexes that exist historically as a means of adjusting for the amount of difference in level resulting from the incorporation of different weights. This linking ensures that conceptually equivalent series are made continuous over time.

In the process of seasonally adjusting the CPI, the item series which require adjustment are fed into the X-11 program; the series obtained are then recombined with the rest of the item series, which are unadjusted and unlinked, to obtain seasonally adjusted aggregates. Then the appropriate linking factors are applied, where required, to alter the level of the seasonally adjusted series by the amount of alteration required for the unadjusted series. The decision to produce seasonally adjusted aggregates by summing the appropriate item series (both those that have been seasonally adjusted and those that have not) rather than directly seasonally adjusting the aggregates was taken because the detection of significant seasonality is facilitated by deseasonalizing series at the item level. This is so because item seasonality within an aggregate may be offsetting, obscuring the existence of important seasonality at the item level.

#### 2. Historical Seasonally Adjusted CPI Data

The use of different weighting systems presents problems for seasonal adjustment, as the incorporation of different weights can alter seasonal patterns at the aggregate levels. One solution to this problem, the one used for the CPI, is to concentrate the seasonal adjustment process to a time period in which the weighting system remains fixed. In the current Revision, item series were rebased to 1974=100 for purposes of seasonal adjustement and aggregation (see reference paper The Consumer Price Index, Revision Based on 1974 Expenditures - Concepts and Procedures, Catalogue 62-546). However, the official published series for Canada, unadjusted for seasonal variations, incorporates the 1967 expenditure weights for the period May 1973 to September 1978. Thus, although appropriate seasonal adjustment factors were developed through use of unofficial data starting in January 1974, official deseasonalized CPI movements are available only for the period subsequent to September 1978.

#### 3. Projected Factors

In general terms, the procedure is to apply the X-11 program to those of the item series which, in accordance with the guidelines, are deemed to be sufficiently seasonal to warrant their deseasonalization. The X-11 program yields, *inter alia*, monthly seasonal factors for a year ahead. The formula to obtain these projected factors is as follows:

 $S_{n+1} = S_n + 1/2$  ( $S_n - S_{n-1}$ ), where "S" is the seasonal factor and "n" is the current period of time.

les indices historiques agrégés de manière à tenir compte, par ajustment, des différences de niveau imputables à l'introduction de pondérations différentes. Ce raccordement nous permet d'assurer la continuité, au cours du temps, de séries conceptuellement équivalentes.

Lors de la désaisonnalisation des IPC, les séries à désaisonnaliser sont introduites dans le programme X-11; les séries ainsi obtenues sont alors recombinées aux autres séries, qui ne sont ni désaisonnalisées, ni raccordées, pour donner des agrégats désaisonnalisés. Les facteurs de raccordement appropriés sont ensuite éventuellement appliqués pour modifier le niveau des séries désaisonnalisées d'une quantité égale au niveau de variation nécessaire pour les séries non désaisonnalisées. On a décidé de produire des séries agrégées désaisonnalisées en prenant la somme des séries appropriées (celles qui ont été désaisonnalisées et celles qui ne l'ont pas été) plutôt que de désaisonnaliser directement les séries agrégées parce que l'on peut plus facilement dégager la saisonnalité significative par la désaisonnalisation des séries au niveau de l'article. La raison en est que la saisonnalité pour un article à l'intérieur d'une série agrégée peut être compensatoire et obscurcir une éventuelle forte saisonnalité au niveau de l'article.

#### 2. Données chronologiques désaisonnalisées de l'IPC

L'utilisation de différents systèmes de pondération présente des problèmes pour la désaisonnalisation, puisque l'introduction de pondérations différentes peut modifier les caractéristiques saisonnières aux niveaux agrégés. Une solution à ce problème, celle utilisée pour l'IPC, consiste à concentrer le processus de désaisonnalisation dans une période de temps où le système de pondération demeure fixe. Pour la révision actuelle, les séries des articles ont été mises sur la base de 1974=100 pour la désaisonnalisation et l'agrégation (voir le document de référence L'indice des prix à la consommation – Révision fondée sur les dépenses de 1974 – Concepts et Procédés, nº 62-546 au catalogue). Toutefois, les séries officielles publiées du Canada, non désaisonnalisées, sont formées à partir des pondérations basées sur les dépenses de 1967 pour la période allant de mai 1973 à septembre 1978. C'est pourquoi, bien que l'on ait élaboré des facteurs de désaisonnalisation par l'emploi de données non officielles remontant à janvier 1974, les mouvements de l'IPC officiel désaisonnalisé ne portent que sur la période postérieure à septembre 1978.

#### 3. Projection de facteurs

Dans l'ensemble, il s'agit d'appliquer le programme X-11 aux séries d'articles qui, conformément aux directives, semblent avoir suffisamment de saisonnalité pour justifier la désaisonnalisation. Le programme X-11 produit entre autres, des facteurs saisonniers mensuels pour une année à l'avance. Pour la projection de ces facteurs, on utilise la formule suivante:

 $S_{n+1} = S_n + 1/2$   $(S_n - S_{n-1})$ , "S" étant le facteur saisonnier et "n" la période courante.

The projected factors are used in the 12 subsequent months to seasonally adjust the appropriate item indexes. Determination of projected seasonal factors for each 12-month period is carried out at the commencement of each calendar year.

It is useful to calculate 12-month forecasts of seasonal patterns of aggregated series. Seasonally adjusted aggregate indexes, however, are built up from their individually adjusted component items, and thus are not the product of direct deseasonalization. Accordingly, in contrast to the practice of projecting seasonal adjustment factors 12 months ahead in the case of individual item series, it is not possible to determine in advance exactly what implicit seasonal factors will be applicable to aggregate series. In actual fact, in any given month seasonal adjustment factors for aggregate indexes constitute a by-product of, rather than an input to, the seasonal adjustment procedures that have been adopted. They are obtained implicitly with the formula:

Original Index
Seasonally Adjusted Index = Seasonal Factor

In order to produce forecasts of seasonal factors for aggregate series, using historical factors obtained implicitly, we apply the above formula, i.e.:

$$S_{n+1} = S_n + 1/2 (S_n - S_{n-1})$$

to obtain projected implicit seasonal factors for the aggregate series. The results of this procedure, however, will not necessarily be identical, month-bymonth, with the actual implicit factors derived from the aggregation process. The forecasts of monthly implicit seasonal factors serve only to provide a general indication of seasonal patterns.

#### 4. Revision Policies

The revision of seasonally adjusted data will take place once a year and on a fixed date. To determine the extent of the revision, it has been established that:

- (i) the percentage of the difference between the new and the old seasonally adjusted values will be computed;
- (ii) the years in which more than five of the percentages obtained in section (i) are greater than one-half per cent (0.5%) will be determined; and
- (iii) the new seasonally adjusted values will be substituted for those previously published, commencing with January of the earliest full year determined in (ii).

This procedure will be followed for several reasons. First, the seasonally adjusted data for the current

On utilise les facteurs ainsi obtenus pour les 12 mois qui suivent pour désaisonnaliser les indices appropriés. La projection des facteurs saisonniers pour chaque période de 12 mois se fait au début de chaque année civile.

Il est utile de calculer des prévisions sur 12 mois des caractéristiques saisonnières des séries agrégées. Les indices agrégés désaisonnalisés, cependant, sont construits à partir de leurs composantes désaisonnalisées individuellement et ils ne sont donc pas le résultat d'une désaisonnalisation directe. En conséquence, contrairement à la méthode qui consiste à faire la projection des facteurs de désaisonnalisation 12 mois à l'avance dans le cas des séries d'articles, il n'est pas possible de déterminer à l'avance et de manière précise quels facteurs saisonniers implicites vont s'appliquer aux séries agrégées. En réalité, pour quelque mois que ce soit, facteurs de désaisonnalisation des indices agrégés constituent un sous-produit des méthodes de désaisonnalisation adoptées plutôt qu'un apport à ces dernières. Ils sont donnés par la formule suivante:

 $\frac{\text{Indice initial}}{\text{Indice désaisonnalisé}} = \text{Facteur saisonnier}$ 

Pour obtenir des prévisions des facteurs saisonniers pour les séries agrégées, à partir des facteurs chronologiques obtenus implicitement, nous utilisons la formule ci-dessus, c.-à-d.:

$$S_{n+1} = S_n + 1/2 (S_n - S_{n-1})$$

pour calculer les projections des facteurs saisonniers implicites des séries agrégées. Toutefois, les résultats ne seront pas nécessairement toujours identiques d'un mois à l'autre aux facteurs implicites réels obtenus lors de l'agrégation. Les prévisions des facteurs saisonniers implicites mensuels ne donnent qu'une indication générale des caractéristiques saisonnières.

#### 4. Principes de révision

La révision des données désaisonnalisées aura lieu une fois par an et à une date fixe. Pour déterminer l'ampleur de cette révision, on a décidé de:

- (i) calculer le pourcentage de la différence entre les anciennes et les nouvelles valeurs désaisonnalisées;
- (ii) déterminer les années où plus de cinq des pourcentages obtenus à la rubrique (i) dépassent un demi pourcent (0.5 %); et de
- (iii) substituer les nouvelles séries désaisonnalisées à celles publiées auparavant, en commençant par le mois de janvier de la plus récente année complète déterminée en (ii).

Cette procédure sera suivie pour plusieurs raisons. En premier lieu, les données désaisonnalisées de l'année en cours

year have been produced using projected seasonal factors derived from previous years' unadjusted data. When the unadjusted data are available at the end of the current year, introduction of these data into the seasonal adjustment calculation will improve the quality of the adjustment for the current period. Secondly, if a new seasonal pattern, or a shift in the pattern or the amplitude is identified, these changes might well affect the seasonally adjusted results for a number of years in the historical record. Thirdly, in order to produce projected seasonal factors to be used in the following 12 months, it is necessary to incorporate the latest raw (unadjusted) data.

In addition, the revision procedure provides the opportunity to examine each item series in the light of the new information obtained in the current year, to determine if each of the item series already adjusted are still seasonal and if any of the unadjusted series have become seasonal. A change in status could occur for series which are either just outside or just inside the limits set up by the Statistics Canada guidelines. The number of such series, however, should be relatively small.

With regard to the above considerations, it has been decided to consider revision of the seasonally adjusted CPI data at the completion of each calendar year. If required, revised seasonally adjusted historical data will be released with the January CPI for the next year.

#### Section C

#### Seasonally Adjusted Groups and Items

The seasonality identified in the CPI is mainly concentrated in about one third of the items that comprise it, the other two-thirds exhibit very little seasonality.

Those items exhibiting sufficient seasonality to warrant their adjustment are included in the groups listed below:

Food

Food for home consumption

Meat, poultry and fish

Beef Pork

Poultry

Fruit and vegetables

Fresh fruit Fresh vegetables ont été calculées grâce aux projections de facteurs saisonniers obtenus à partir de données non désaisonnalisées d'années précédentes. Lorsque l'on dispose de données non désaisonnalisées à la fin de l'année en cours, l'introduction de ces données dans le calcul de désaisonnalisation améliore la qualité de la désaisonnalisation pour la période en cours. Deuxièmement, si l'on détecte une nouvelle caractéristique saisonnière ou une modification de l'amplitude d'une caractéristique, ces changements pourraient bien affecter les résultats de la désaisonnalisation pour un certain nombre d'années dans la série chronologique. Enfin, pour effectuer la projection de facteurs saisonniers destinés à être utilisés pour les 12 mois suivants, il est nécessaire d'incorporer les dernières données brutes (non désaisonnalisées).

De plus, la révision fournit l'occasion d'étudier chaque série d'articles à la lumière des nouveaux renseignements obtenus au cours de l'année courante, pour déterminer si chacune des séries déjà désaisonnalisée contient encore de la saisonnalité, ou si l'une des séries non désaisonnalisées contient maintenant de la saisonnalité. La nature des séries qui sont situées soit juste à l'extérieur, soit juste à l'intérieur des limites définies par les directives de Statistique Canada pourrait s'en trouver modifiée. Ces séries devraient cependant demeurer relativement peu nombreuses.

Compte tenu des considérations énoncées ci-dessus, il a été décidé d'envisager la révision des données désaisonnalisées de l'IPC à la fin de l'année civile. Au besoin, on publiera les données chronologiques désaisonnalisées révisées avec l'IPC de janvier pour l'année suivante.

#### Section C

#### Groupes et articles désaisonnalisés

La saisonnalité isolée dans l'IPC se concentre principalement sur le tiers environ des éléments constitutifs, les deux autres tiers présentant très peu de saisonnalité.

Le groupe ci-dessous est la liste des éléments qui présentent suffisamment de saisonnalité pour justifier leur désaisonnalisation:

Aliments

Aliments consommés à la maison

Viandes, volaille et poisson

Boeuf

Porc

Volaille

Fruits et légumes

Fruits frais

Légumes frais

Housing

Shelter

Clothing

Household operation

Habitation

Logement

Dépenses de ménage

Habillement

Women's wear Girls' wear Men's wear Boys' wear

Vêtements pour femmes Vêtements pour filles Vêtements pour hommes Vêtements pour garçons

Transportation Transports

Health and personal care Santé et soins personnels

Recreation, reading and education Loisirs, lecture et formation

Tobacco and alcohol Tabacs et boissons alcoolisées

CPI Reclassified by Goods and Services

Goods

Durable goods
Semi-durable goods
Non-durable goods
Non-durable goods excluding food

Services

All-items excluding food

Classification complémentaire de l'IPC par biens et services

Biens

Biens durables
Biens semi-durables
Biens non durables

Biens non durables (sauf aliments)

Services

Ensemble sans les aliments

## Appendix 4

#### CITY AVERAGE RETAIL PRICES

#### 1. Introduction

The Prices Division of Statistics Canada collects. each month, many thousands of retail prices in most of the large centres across the country. However, though these prices may be entirely suitable for compiling the Consumer Price Index, they do not necessarily yield representative and comparable average prices. There are a number of reasons for this. Variations in food habits and in the brands selected among cities cause city-to-city differences that do not represent real price differentials for the same quality. The brands selected for the production of the CPI are the volume sellers, both manufacturers' and private label brands and the Index produced for any one city, as well as for Canada, will be based upon the price movements of a heterogeneous mixture that might well be quite different from the heterogeneous mixture of another city. To produce an accurate measure of price change within a city, it is essential to ensure that the quantities, brands and sizes selected are sufficiently important to represent price movement. However, to produce an accurate measure of average prices at one point in time which will permit comparison between cities, it is essential that the qualities, brands and sizes selected are sufficiently similar so as not to artificially generate price differentials.

Further, although market forces will generally impose a certain degree of uniformity on price movements within a city, price ranges at any point of time can nevertheless still be quite wide. Thus, a sample of retail outlets which is sufficiently large to accurately monitor price movement, might well be too small to adequately encompass price spreads at one point of time.

Thus, in order to satisfactorily produce representative and comparable average prices, it was deemed necessary to undertake a special pricing survey which had the features outlined below.

## 2. Average Prices Survey

The Average Retail Prices Surveys are normally undertaken during the second or third week of October

## Appendice 4

### PRIX DE DÉTAIL MOYENS PAR VILLE

#### 1. Introduction

La Division des prix de Statistique Canada recueille chaque mois des milliers de prix de détail dans la plupart des grands centres urbains du pays. Mais, bien que ces prix puissent entièrement servir à la confection de l'indice des prix à la consommation, ils ne donnent pas nécessairement des prix moyens représentatifs et comparables. Il y a un certain nombre de raisons à cela. Les différences entre les habitudes de dépenses alimentaires et les marques choisies dans les différentes villes entraînent des différences entre villes qui ne représentent pas les différences réelles entre les prix pour un produit de même qualité. Les marques retenues pour la confection de l'IPC sont les articles qui se vendent en grandes quantités, qu'il s'agisse de marques de commerces de fabricants ou d'entreprises individuelles et l'indice d'une ville quelconque, ainsi que celui de l'ensemble du Canada sera basé sur le mouvement des prix d'un ensemble hétérogène qui peut fort bien différer assez sensiblement de l'ensemble d'une autre ville. Pour obtenir une mesure adéquate des mouvements de prix dans une ville, il est essentiel de s'assurer que les quantités, les marques et les tailles choisies soient suffisamment importantes pour représenter le mouvement des prix. Cependant, afin d'obtenir une mesure adéquate des prix moyens à un instant donné qui permette une comparaison entre villes, il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire artificiellement des différences de prix.

Par ailleurs, bien que les forces agissant sur le marché vont en général imposer un certain degré d'uniformité aux mouvements de prix dans une ville, l'intervalle des prix à un instant donné peut être néanmoins assez étendu. Ainsi, un échantillon de magasins de détail suffisamment important pour suivre précisément le mouvement des prix peut très bien se révéler trop petit pour représenter adéquatement l'éventail des prix à un temps donné.

Donc, afin d'obtenir des prix moyens représentatifs et comparables qui soient satisfaisants, on a jugé nécessaire d'entreprendre une enquête spéciale d'observation des prix, dont les caractéristiques sont décrites ci-dessous.

#### 2. Enquête sur les prix moyens

Une enquête sur les prix moyens de détail est normalement effectuée durant la deuxième ou troisième semaine and April. Prices of approximately 60 items, consisting mainly of food and some personal care and household supply products, are collected in a large number of outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Sault Ste. Marie, Thunder Bay, Winnipeg, Saskatoon, Regina, Calgary, Edmonton, Vancouver and Victoria.

The sample of stores is designed so that the outlets selected have, between them, approximately half or more of the grocery store sales for each city. Grocery stores are defined, for purposes of this Survey, as those with meat sales valued at between 15% and 50% of total sales. Sales data are derived from Census of Merchandising information, updated, where necessary, by local advice from Statistics Canada Regional Offices.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

## 3. Calculation Methodology

#### (a) City Prices

Prices are collected in both chain and independent stores. (A chain store organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

#### (b) Weighted City Averages

A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

d'octobre et d'avril. Les prix de quelque 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Sault Ste. Marie, Thunder Bay, Winnipeg, Saskatoon, Régina, Calgary, Edmonton, Vancouver et Victoria.

L'échantillon des magasins est défini de telle façon que les points de vente choisis, pris ensemble, comptent pour environ la moitié ou plus des ventes des épiceries dans chaque ville. Aux fins de cette enquête, les épiceries étaient définies comme celles dont les ventes de viande représentaient entre 15 % et 50 % du total des ventes. Les données des ventes sont dérivées à partir des données du recensement des marchandises, mises à jour, lorsque nécessaire, sur recommandation des bureaux régionaux de Statistique Canada.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

#### 3. Méthode de calcul

#### a) Prix urbains

Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas ces articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

#### b) Moyennes pondérées des villes

Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

#### 4. Monthly Updating of Price Averages

The considerable resources required to collect and analyse the data to produce representative and comparable average prices cannot be expended each month. It therefore becomes necessary to update the survey prices on a regular monthly basis until another average prices survey can be undertaken. Because such updated prices are not themselves the direct product of an expanded average prices survey, but instead are calculated by the application of some measure to the actual averages, they are designated as "Calculated Average Prices".

Under normal circumstances a readily available method of producing Calculated Average Prices for the month subsequent to the survey months would be to apply the movement of the relevant city and item CPI to the corresponding average prices for the survey months. However, because price collection for the survey months falls between the pricing dates for the October and November or April and May CPI, the price movement for these periods for certain items has to be adjusted to take into account this time lag. For the months subsequent to November or May, the full month-to-month movement is applied to the latest available calculated average prices to produce the following month's calculated average prices. Occasionally, in periods of volatile price movements, the methodology employed in adjusting prices falling between the CPI pricing dates becomes extremely subjective, yielding results which are open to misinterpretation. Calculated Average Prices for items falling in this category may, therefore, not be published. It is important to note that the Calculated Average Prices are estimates of retail price levels in each city. Since they are not derived from actual surveys of prices in the marketplace, but rather from an updating of previously gathered price information, they may not always precisely reflect actual market conditions at a specific point in time.

Updated calculated average prices are, at present, published only for the 14 index cities. This is attributable to the limited experience which has been acquired in using this updating methodology for the 12 non-index cities.

#### 5. Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey is provided in the immediately following pages.

#### 4. Mise à jour mensuelle des moyennes de prix

On ne peut consacrer chaque mois les ressources considérables nécessaires à la collecte et à l'analyse des données pour produire des prix moyens représentatifs et comparables. Il devient donc nécessaire de mettre à jour les prix de l'enquête sur une base mensuelle régulière jusqu'à ce qu'il soit possible d'entreprendre une autre enquête sur les prix moyens. Étant donné que ces prix mis à jour ne sont pas eux-mêmes le produit direct d'une enquête exhaustive sur les prix moyens, mais qu'ils sont au contraire calculés par l'application d'une certaine mesure aux moyennes réelles, on les qualifie de "prix moyens calculés".

Dans des conditions normales, une méthode rapidement applicable pour obtenir des prix moyens calculés pour le mois de novembre consiste à appliquer le mouvement des IPC des articles en question aux prix movens d'octobre de la ville observée. Cependant, la date du relevé des prix de l'enquête se situant entre les dates des relevés de prix des IPC d'octobre et novembre ou d'avril et mai. Il faut ajuster la variation de prix de ces périodes pour certains articles afin de tenir compte de cet écart de temps. Pour le mois suivant, novembre ou mai, la variation totale d'un mois à l'autre peut s'appliquer au dernier prix moyen calculé disponible pour obtenir le prix moyen calculé du mois suivant. Occasionnellement, dans des périodes où les prix sont très volatiles, la méthodologie utilisée pour rajuster les prix entre les relevés de l'IPC devient extrêmement subjective, produisant ainsi des résultats que l'on pourrait mal interpréter. Il se pourrait, donc, que les prix moyens calculés pour les articles se rapportant à cette catégorie ne soient pas publiés. Il est important de noter que les prix moyens calculés sont une estimation du niveau des prix moyens dans chaque ville. Comme ils ne proviennent pas d'enquêtes réelles sur les prix pratiqués mais représentent plutôt une mise à jour de renseignements sur les prix recueillis auparavant, ils ne rendent pas toujours compte avec précision de la conjoncture commerciale à un instant donné.

Les prix moyens calculés ne sont présentement publiés que pour les 14 villes dont on produit un indice séparé à cause de notre expérience limitée face à l'utilisation de la méthode de mise à jour pour les 12 villes dont on ne produit pas un indice séparé.

#### 5. Spécifications des articles

Les pages qui suivent, présentent une description des quelques 60 articles contenus dans l'enquête des prix moyens.

# CITY AVERAGE RETAIL PRICES – ITEM SPECIFICATIONS

#### **Detailed Specification**

#### **Dairy Products**

Milk. Fresh fluid whole dairy milk, pasteurized, may be homogenized or contain vitamin D. Disposable carton of 1 litre.

Evaporated milk. Generally available manufacturers' brands (store brands excluded), unsweetened, may be vitaminized, 385 ml. can.

Powdered milk. Generally available manufacturers' brands (store brands excluded), powdered skim milk, 3-pound card-board package, may be pasteurized or vitaminized.

Ice cream. Store brand, vanilla, between 10% and 12% milk fat content in regular (non-fancy) container of 2 litres.

Butter. Lowest price available in store for first grade, creamery butter, salted, parchment or foil wrapped, 1 pound.

Cheese. Generally available manufacturers' brands (store brands excluded), process cheese square slices, plain, without seasoning, relishes or condiments, individually wrapped, 1/2 pound.

#### Poultry and Eggs

Chicken. Eviscerated, fresh or frozen, broiler or fryer, whole, 2 to 4 pounds, Grade A, price per pound.

Eggs. Large eggs, Grade A, in a carton of 1 dozen. Medium eggs, Grade A, in a carton of 1 dozen.

#### Beef

Sirloin steak. Cut from section of hind quarter next to short loin, bone-in or partially boned, fresh, Canada A or B brand, pound.

Round steak. Full cut of section of hind quarter next to rump, fresh, Canada A or B brand, boneless, pound.

Prime rib roast. Standing, bone-in, short cut, 7 inches, any ribs within the first five of standard seven, fresh, Canada A or B brand, pound.

## PRIX DE DÉTAIL MOYENS PAR VILLE - SPÉCI-FICATIONS DES ARTICLES

#### Spécification détaillée

#### **Produits laitiers**

Lait. Lait de laiterie frais, liquide, entier, pasteurisé, peut être homogénéisé ou additionné de vitamine D. Contenant de 1 litre (en carton), non consigné.

Lait évaporé. Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré, peut être additionné de vitamines, boîte de 385 ml.

Lait en poudre. Marques des fabriquants largement distribuées (sauf les marques des magasins), lait écrémé en poudre, contenant en carton de 3 livres, peut être pasteurisé ou vitaminé.

Crème glacée. Marque du magasin, à la vanille, contenant de 10 % à 12 % de matière grasse de lait dans des contenants réguliers (non de fantaisie), 2 litres.

Beurre. Beurre de première qualité, le moins cher disponible dans le magasin, beurre de laiterie, salé, enveloppé dans du parchemin ou dans un emballage d'aluminium, 1 livre.

Fromage. Marques des fabricants largement distribuées (sauf les marques des magasins), fromage fondu, en tranches carrées, enveloppées individuellement, nature, sans assaisonnement, ni relish, ni condiments, 1/2 livre.

#### Volaille et oeufs

Poulet. Vidé, frais ou congelé, à griller ou à frire, entier, de 2 à 4 livres, catégorie A, vendu à la livre.

Oeufs. Oeufs de grosse taille, catégorie A, en boîte de 12. Oeufs de taille moyenne, catégorie A, en boîte de 12.

#### **Boeuf**

Bifteck de surlonge. Morceaux coupés dans la partie du quartier de derrière voisine du bout de longe, non désossé ou partiellement désossé, frais, marque Canada A ou B, livre.

Bifteck dans la ronde. Coupe entière d'une section du quartier de derrière voisine de la croupe, frais, marque Canada A ou B, désossé, livre.

Rôti de côtes de choix. Nature, non désossé, coupe courte, 7 pouces, toutes les côtes parmi les cinq premières sur les sept côtes normales, frais, marque Canada A ou B, livre.

#### Beef - Concluded

Blade roast (blade in). Cut from fore quarter next to rib section, fresh, Canada A or B brand, pound.

Blade roast (blade out). Cut from fore quarter next to rib section, fresh, Canada A or B brand, pound.

Stewing beef. Boneless stewing beef, fresh, Canada A or B brand, pound.

**Ground beef, regular.** Ground beef, with 24% to 30% fat content, fresh, pound.

#### Pork

Pork, centre cut chops. Cut from centre of loin, fresh, bone-in, trimmed, excluding "fast fry", "brown and serve", "rib chops", mixed cut and frozen chops, pound.

Pork, butt roast. Cut from top half of shoulder, fresh, skin removed, about 1/2 inch fat left on, Boston Butt, pound.

Pork, butt roast. Cut from top half of shoulder, fresh, skin removed, about 1/2 inch fat left on, Boneless Butt, pound.

Sausages. Generally available manufacturers' brands (store brands excluded), pure pork sausages, fresh or frozen, pound.

**Bacon**. Generally available manufacturers' brands (store brands excluded), smoked, side bacon, sliced, rind off, vacuum packaged, packers first line.

#### Other Meat

Wieners. Generally available manufacturers' brands (store brands excluded). Made from beef and pork, ground, skinless, smoked and cooked, vacuum packaged, first grade, pound.

#### Fish

**Salmon.** Generally available manufacturers' brands (store brands excluded). British Columbia, sockeye salmon, first grade, stamped "Canada", 7 3/4 ounce tin.

#### Boeuf - fin

Rôti de palette (non désossé). Rôti coupé dans la partie du quartier de devant voisine de la section des côtes, frais, marque Canada A ou B, livre.

Rôti de palette (désossé). Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, livre.

**Boeuf à ragoût**. Désossé, boeuf à ragoût, frais, marque Canada A ou B, livre.

Boeuf haché régulier. Boeuf haché, matières grasses: 24 % à 30 %, frais, livre.

#### Porc

Porc, côtelettes, partie du centre. Coupe provenant du centre de la longe, frais, non désossé, paré, sauf les côtelettes "à cuisson rapide", "faire dorer et servir", "côtelettes de côtes", coupes diverses et la viande congelée, livre.

Porc, rôti de porc. Rôti coupé dans la moitié supérieure de l'épaule, frais, couenne enlevée, reste environ 1/2 pouce de gras, "Boston Butt", livre.

Porc, rôti de porc. Rôti coupé dans la moitié supérieure de l'épaule, frais, couenne enlevée, reste environ 1/2 pouce de gras, rôti désossé, livre.

Saucisses de porc. Marques des fabriquants largement distribuées (sauf les marques des magasins), saucisses de pur porc, livre.

Bacon. Marques des fabriquants largement distribuées (sauf les marques des magasins), fumé, bacon de flanc, en tranche, couenne enlevée, emballé sous vide, fabricants de première qualité.

#### Autre viande

Saucisses de Francfort. Marques des fabricants largement distribuées (sauf les marques des magasins). Faites de boeuf et de porc haché, sans peau, fumées et prêtes à servir, emballées sous vide, première qualité, livre.

#### Poisson

Saumon. Marques des fabricants largement distribuées (sauf les marques des magasins). Saumon de Colombie-Britannique, sockeye, de première qualité, étiqueté "Canada", boîte de 7 3/4 onces.

#### Fats

Shortening. Generally available manufacturers' brands (store brands excluded), processed from blends of edible vegetable oils and animal fats or 100% vegetable oils. May be partly hydrogenated, carton of 1 pound.

#### **Bakery and Cereal Products**

Flour, 2.5 kg. Generally available manufacturers' brands (store brands excluded) of white all purpose or bread flour, vitaminized may be pre-sifted. Excluding instantized, pastry and other special types, weight change as of October 1978.

Flour, 3.5 kg. Generally available manufacturers' brands (store brands excluded) of white all purpose, vitaminized flour. Excluding instantized, pastry and other special types, weight change as of October 1978.

Corn flakes. Generally available manufacturers' brands (store brands excluded), corn flakes, 675 g package, weight change as of October 1978.

Spaghetti. Generally available manufacturers' brands (store brands excluded) of ready cut long spaghetti, 500 g package, weight change as of April 1979.

Bread. Store brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched.

**Bread.** Manufacturers' brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched.

Soda crackers. Generally available manufacturers' brand (store brands excluded), salted, unsalted or saltines, 16 ounces.

#### Sugar and Sweets

Sugar. White, granulated, cane or beet sugar, bag of 2 kilograms.

Jam. Generally available manufacturers' brands (store brands excluded), pure strawberry jam, 9-ounce glass jar.

#### Fruit

Oranges. California, medium size (138 or 113) price per pound.

#### Matières grasses

Graisse végétale. Marques des fabricants largement distribuées (sauf les marques des magasins), fabriquée à partir de mélanges d'huiles végétales comestibles et de graisses animales ou d'huile végétale à 100 %. Peut être partiellement hydrogénée, carton de 1 livre.

#### Céréales et produits de boulangerie

Farine, 2.5 kg. Marques des fabricants largement distribuées (sauf les marques des magasins) blanche tout usage ou farine à pain, additionnée de vitamines peut être prétamisée. Exclure la farine instantanée, la farine à pâtisserie et les autres types spéciaux de farine, changement de poids en octobre 1978.

Farine, 3.5 kg. Marques des fabriquants largement distribuées (sauf les marques des magasins), farine tout usage, additionnée de vitamines. Exclure la farine instantanée, la farine à pâtisserie et les autres types spéciaux de farine, changement de poids en octobre 1978.

Flocons de mais. Marques des fabricants largement distribuées (sauf les marques des magasins), mais en flocons, paquet de 675 g, changement de poids en octobre 1978.

Spaghetti. Marques des fabricants largement distribuées (sauf les marques des magasins), spaghetti, coupe longue, paquet de 500 g, changement de poids en avril 1979.

Pain. Marques des magasins, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines.

Pain. Marques des fabricants, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines.

Biscuits soda. Marques des fabricants largement distribuées (sauf les marques des magasins), salés, non salés ou "saltines", paquet de 16 onces.

#### Sucre et produits sucrés

Sucre. Blanc, cristallisé, de canne ou de betterave, sac de 2 kilogrammes.

Confiture. Marques des fabricants largement distribuées (sauf les marques des magasins), pure, de fraises, pot de verre de 9 onces.

#### **Fruits**

Oranges. De Californie, grosseur moyenne (138 ou 113) prix à la livre.

#### Fruit - Concluded

Grapefruit. United States, white, may be seedless, size 48's, if not available 40's or 56's, good quality, price per pound.

Bananas. First grade, price per pound.

Apple juice. Generally available manufacturers' brands (store brands excluded), unsweetened, natural, may be vitaminized, choice grade, single strength, 48 ounces

#### Vegetables

**Potatoes.** Table potatoes, white, Canada No. 1, 10-pound bag.

Onions. Cooking onions, common white, yellow or red, dry, good quality, in plastic or cellophane packages (up to a 3-pound package), price per pound.

Carrots. Tops completely removed, good quality, in plastic or cellophane packages (up to a 3-pound package), price per pound.

Cabbage. Fresh, domestic or imported, green cabbage, good quality, price per pound of an average size head.

Celery. Celery stalks, green, fresh, may be trimmed or clipped, price per pound.

Lettuce. Fresh head, green, good quality, average size head, price per pound.

Tomatoes, canned. Generally available manufacturers' brands (store brands excluded), of canned field tomatoes, choice grade, 28 fluid ounces.

Infants' food. Generally available manufacturers' brands (store brands excluded) of baby food, strained or vegetable mixture, glass jar or can of 4 1/2 ounces.

Beans. Generally available manufacturers' brands (store brands excluded) of cooked beans with pork and tomato sauce, 14 fluid ounces.

**Soup.** Generally available manufacturers' brands (store brands excluded) of vegetable soup, approximately 10 ounces.

Tomato juice. Generally available manufacturers' brands (store brands excluded), juice of fresh tomatoes, may contain salt, sugar or dextrose, fancy grade, 48 ounces.

#### Fruits - fin

Pamplemousses. Des États-Unis, à chair blanche, grosseur 48; autrement, grosseur 40 ou 56, bonne qualité, prix à la livre.

Bananes. Première qualité, vendues à la livre.

Jus de pommes. Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré, naturel, peut être additionné de vitamines, catégorie de choix, n'ayant pas été dilué, boîte de 48 onces liquides.

#### Légumes

Pommes de terre. Pommes de terre de table, à chair blanche, catégorie Canada nº 1, sac de 10 livres.

Oignons. Oignons à cuire, ordinaires, blancs, jaunes ou rouges, secs, bonne qualité, en paquet de matière plastique ou de cellophane (paquet jusqu'à 3 livres), vendus à la livre.

Carottes. Queues complètement enlevées, bonne qualité, paquet de matière plastique ou de cellophane (paquet jusqu'à 3 livres), vendues à la livre.

Choux. Frais, variété canadienne ou importée, choux vert, bonne qualité, prix à la livre d'un chou de grosseur moyenne.

Céleri. Pieds de céleri, verts, frais, peuvent être taillés, prix à la livre.

Laitue. Fraîche, verte, bonne qualité, taille moyenne, prix à la livre.

Tomates, en conserve. Marques des fabricants largement distribuées (sauf les marques des magasins), de tomates en conserve de plein champ, catégorie de choix, boîte de 28 onces liquides.

Nourriture pour bébés. Marques des fabricants largement distribuées (sauf les marques des magasins), de nourriture pour bébés, égouttée ou en purées, pots de verre ou boîte de 4 1/2 onces.

Fèves au lard. Marques des fabricants largement distribuées (sauf les marques des magasins), de fèves au lard cuites avec du porc et de la sauce tomate, boîte de 14 onces liquides.

Soupe. Marques des fabricants largement distribuées (sauf les marques des magasins) de soupe aux légumes, boîte d'environ 10 onces.

Jus de tomates. Marques des fabricants largement distribuées (sauf les marques des magasins) de jus de tomates fraîches; peut contenir du sel, du sucre ou du dextrose, catégorie de fantaisie, 48 onces.

#### Beverages

Tea bags. Generally available manufacturers' brands (store brands excluded), orange pekoe tea bags, package of 60 two-cup paper bags (8 ounces).

Coffee, roasted. Generally available manufacturers' brands (store brands excluded), roasted whole beans, regular or all purpose ground coffee, good quality, 1 pound paper bag.

Coffee, instant. Generally available manufacturers' brands (store brands excluded), dried coffee, extract, soluble, pure or may have added dextrin, dextrose or maltose, 6 ounces.

**Soft drinks**. Generally available manufacturers' brands (store brands excluded), cola flavour. Returnable bottle type, excluding deposits. One bottle of 750 ml.

#### Miscellaneous Groceries

Jelly powder. Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 3 ounces.

#### **Supplies and Personal Care Items**

Synthetic detergent powder. Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 3 litres.

Scouring powder. Generally available manufacturers' brands (store brands excluded), cleansing powder or cleanser with bleaching agent, 14 ounces.

Toilet paper. Generally available manufacturers' brands (store brands excluded) of white or pastel shades, medium quality, perforated, single sheet tissue. Multiple units of 2, about 600 to 650 sheets in roll, approx. 4" x 5", wrapped in poly. Price per roll.

Toilet soap. Generally available manufacturers' brands (store brands excluded). Selection confined to wrapped and popular brands sold in multiple units of three or four bars per package. Guest or bath sizes, as well as varieties with high synthetic or perfume content, excluded. Price per bar.

Toothpaste. Generally available manufacturers' brands (store brands excluded), standard dentifrice, may have fluoride, 50 ml.

#### **Boissons**

Thé en sachets. Marques des fabricants largement distribuées (sauf les marques des magasins), thé en sachets "orange Pekoe" paquet de 60 sachets de papier pour deux tasses chacun (8 onces).

Café torréfié. Marques des fabricants largement distribuées (sauf les marques des magasins), torréfié, en grains entiers, ordinaire ou moulu "tout usage", bonne qualité, sacs en papier de 1 livre.

Café instantané. Marques des fabricants largement distribuées (sauf les marques des magasins), séché, extrait, soluble, pur ou peut être additionné de dextrine, de dextrose ou de maltose, pot de 6 onces.

Boissons gazeuses. Marques des fabricants largement distribuées (sauf les marques des magasins), saveur de cola. Bouteille consignée, prix de la bouteille non compris. Une bouteille de 750 ml.

#### Articles divers d'épicerie

Poudre à gelée. Marques des fabricants largement distribuées (sauf les marques des magasins), de poudre à gelée pour dessert à saveur, paquet de 3 onces.

#### Fournitures et articles de soins personnels

Détersif synthétique en poudre. Marques des fabricants largement distribuées (sauf les marques des magasins), tout usage, cristallisé ou en poudre, boîte de 3 litres.

Poudre à récurer. Marques des fabricants largement distribuées (sauf les marques des magasins), poudre à récurer avec agent de blanchiment, contenant de 14 onces.

Papier hygiénique. Marques des fabricants largement distribuées (sauf les marques des magasins), blanc ou de couleur pastel, qualité moyenne, perforé, une seule épaisseur. Paquets de 2, d'environ 600 à 650 feuilles par rouleau, 4" x 5", enveloppés dans du polyéthylène. Prix par rouleau.

Savon de toilette. Marques des fabricants largement distribuées (sauf les marques des magasins). Choix limité aux marques emballées et populaires vendues en groupe de trois ou quatre pains par paquet. Les savons de taille pour invité ou de bain de même que les variétés à contenu synthétique ou de parfum, sont exclus. Prix à l'unité.

Pâte dentifrice. Marques des fabricants largement distribuées (sauf les marques des magasins), pâte dentifrice ordinaire peut contenir du fluorure, tube de 50 ml.

#### Supplies and Personal Care Items - Concluded

Cleansing tissues. Generally available manufacturers' brands (store brands excluded), package of 200 double tissues, approximately 8" to 8 1/2" x 9 1/2" size.

#### Tobacco

Cigarettes. Generally available popular brands, king size, filter tip, carton of 200.

#### Fournitures et articles de soins personnels – fin

**Papier-mouchoir.** Marques des fabricants largement distribuées (sauf les marques des magasins), paquet de 200 mouchoirs double-épaisseur, taille approximative de 8" à 8 1/2" x 9 1/2".

#### **Tabacs**

Cigarettes. Marques populaires couramment disponibles, grand format, bout filtre, carton de 200.

## Appendix 5

# CANADIAN INTER-CITY RETAIL PRICE COMPARISONS

Table 12 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of commodities and services at the specified point in time.

The data base of this place-to-place study of comparative retail prices was largely drawn from the large volume of price quotations collected for the production of the monthly city consumer price indexes. For the inter-city food price differentials, however, use was also made of data gathered in a special program of pricing undertaken annually for publication of City Average Retail Prices.<sup>1</sup>

In developing these spatial price relationships, efforts were made to achieve comparability by seeking to equate qualities of goods and services in the various locations and by matching types of retail outlets so far as possible. To optimize price comparability between locations, differential price measurements were initially derived separately as between the following pairs of cities:

St. John's Halifax Charlottetown - Halifax Saint John — Halifax Ottawa - Halifax Toronto - Montréal - Toronto Ottawa Toronto - Winnipeg - Winnipeg Regina - Winnipeg Edmonton - Vancouver Edmonton

Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names whenever possible and also with some regard for comparability of retail outlets and merchandising practises. By means of a linking procedure, the paired city item indexes were initially compared with their counterparts in a common base city; subsequently they were related to the weighted average of the combined 11 cities equalling 100. The city-to-city price relationships for individual items thus derived were than aggregated by

## Appendice 5

#### COMPARAISONS ENTRE LES PRIX DE DÉTAIL DANS DIFFÉRENTES VILLES DU CANADA

Le tableau 12 présente les différences de prix à la consommation de 11 villes du Canada, situées dans les 10 provinces, pour un nombre choisi de biens et de services, pour la période de temps spécifiée.

Les données de cette étude comparative de prix de détail proviennent en grande partie du relevé de prix utilisé pour la production de l'indice mensuel des prix à la consommation. On a, toutefois, utilisé les données obtenues dans le cadre d'un programme annuel spécial de relevé des prix servant à la publication des prix de détail moyens par ville¹ pour déterminer les différences de prix de la nourriture entre les villes.

Des efforts ont été entrepris pour développer des comparaisons valables en cherchant à obtenir des qualités identiques de biens et de services dans les différents endroits et en couplant, lorsque possible, des points de vente au détail comparables, pour déterminer les relations de prix spatiales. Afin d'optimiser la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour les paires de villes suivantes:

- Halifax St. John's Charlottetown - Halifax Saint John — Halifax Halifax Ottawa - Montréal Toronto - Toronto Ottawa - Winnipeg Toronto - Winnipeg Regina - Winnipeg Edmonton - Vancouver Edmonton

À l'intérieur de chaque paire de villes, les prix ont été couplés au niveau de l'article en s'assurant que les spécifications étaient identiques, y compris les marques, lorsque c'était possible et aussi en tenant compte de la comparaison des points de vente au détail et des méthodes de vente. Grâce à la procédure de couplage, les indices couplés des villes ont d'abord été comparés au niveau de l'article et transformés sur la base d'une ville commune, ils ont ensuite été reliés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Les relations entre les prix d'articles entre les villes ainsi déduites ont été regroupées en applicant le schéma de

<sup>1</sup> See Table 10 and Appendix 4.

<sup>1</sup> Voir tableau 10 et appendice 4.

application of the combined 11-city CPI weighting patterns updated for price change to the time of the intercity retail price comparison study. Measurements of inter-city retail price differentials are updated, as required, by application of the relative movement of item prices in each city, obtained from the relevant city CPI.

It should be noted, especially in periods of volatile price movement, that city-to-city retail price relationships may be significantly affected by the timing and the relative rate of price change occurring in each location. Furthermore, since the retail prices used in this study are those faced by consumers, they include sales and excise taxes as applicable. Thus, comparative rates of provincial sales tax in effect in the various cities at the time of price comparison, as well as changes in the rate of incidence of such taxes, can be of importance in explaining inter-city price differentials for tax-affected items or groups of items.

pondération de l'IPC des 11 villes combinées, mis à jour par la variation de prix qui s'est effectuée jusqu'au moment de l'étude comparative des prix de détail entre les villes. Les mesures de comparaison des prix de détail entre villes sont mises à jour, lorsque nécessaire, en utilisant le mouvement des prix obtenu des IPC de chaque ville, au niveau de l'article.

Il convient de noter, surtout dans une période de fluctuation des prix, que les relations entre les prix de détail d'une ville à l'autre peuvent varier de façon significative selon la période de relevé des prix et le taux relatif de variation des prix à chaque endroit. De plus, puisque les prix de détail utilisés pour cette étude sont ceux que les consommateurs doivent payer, les taxes de vente et d'accise y sont incluses. Donc, les taux comparatifs des taxes de vente provinciale effectives dans les diverses villes au temps de la comparaison, de même que le changement dans le taux ou l'incidence de ces taxes, peuvent être importantes pour expliquer les différences de prix entre les villes des articles ou groupes d'articles taxables.

# Appendix 6

#### INTERNATIONAL RETAIL PRICE COM-PARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price level are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these items by means of benefits separate from those regu-

## Appendice 6

#### COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créé. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10 % au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5 % à 12.4 % supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas prix au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par

lated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial interprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price

des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la revision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé

relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisions. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada. de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au points en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer jusqu'au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada.

#### NOTE TO USERS

Commencing with the October 1978 index, the Revision of the Consumer Price Index, which features, among other things, the incorporation of 1974 family expenditure patterns, is being introduced. Details regarding this Revision are contained in a reference paper, The Consumer Price Index, Revision Based on 1974 Expenditures — Concepts and Procedures (Catalogue 62-546; \$1.40) which can be obtained from the Publications Distribution Section, Statistics Canada, Ottawa, K1A 0T6.

For a period of 12 index months extending from October 1978 to September 1979, Statistics Canada will be producing a modified price index entitled "Allitems Index of Consumer Prices for Canada, Based on the 1974 Basket for the Urban Population with Family and Income Size Constraints". This index will use 1974 expenditures pertaining to households with two to six members whose incomes in 1974 ranged between \$6,000 and \$22,000.

The index will be available from Labour Canada approximately 10 days following the release of the monthly official Consumer Price Index.

Inquiries relating to this modified price index should be directed to:

Collective Bargaining Information Centre, Planning Unit, Labour Canada, Ottawa, Ontario. K1A 0J2 819-997-3117

#### NOTE AUX UTILISATEURS

La révision de l'indice des prix à la consommation qui comporte, entre autres, l'utilisation des habitudes de dépenses de 1974 des familles, entre en vigeur avec l'indice pour le mois d'octobre 1978. Les éléments de cette révision sont exposés dans le document de référence L'indice des prix à la consommation, Révision fondée sur les dépenses de 1974 – Concepts et Procédés (nº 62-546 au catalogue, \$1.40) qu'on peut obtenir de la section de Distribution des publications, Statistique Canada, Ottawa, K1A 0T6.

Statistique Canada produira un indice de prix modifié intitulé "Indice d'ensemble des prix à la consommation pour le Canada, fondé sur le panier de 1974 pour la population urbaine avec les constraintes relatives à la taille et au revenu de la famille" pour les 12 indices mensuels entre octobre 1978 et septembre 1979. Cet indice utilisera les dépenses de 1974 des ménages de deux à six personnes dont les revenus variaient entre \$6,000 et \$22,000 en 1974.

On pourra obtenir cet indice de Travail Canada environ 10 jours après l'émission de l'Indice officiel des prix à la consommation (mensuel).

Toute demande concernant cet indice de prix modifié devra être adressée à:

Centre d'information sur la négociation collective Sous-section de la planification Travail Canada Ottawa (Ontario). K1A 0J2 819-997-3117

YEAR-END SUPPLEMENT TO CATA-LOGUE 62-010

# SUPPLÉMENT DE FIN D'ANNÉE À Nº 62-010 AU CATALOGUE

## 1979 IN RETROSPECT 1979 EN RÉTROSPECTIVE

Consumer Price Index, Canada (1971=100)

#### Overview

This year-end supplement presents a retrospect of consumer price behaviour in 1979 in terms of annual averages (i.e., averages of the 12 monthly indexes for the calendar years 1978 and 1979). Such a measure of price change, unlike the year-over-year percentage changes derived by comparing the current monthly index level to the index level of the same month in the previous year (see Table 1), is less influenced by the effect of irregular monthly movements and therefore presents a more representative picture of price behaviour for the year as a whole.

The year 1979 was again characterized by a continuation of the relatively high rates of annual consumer price increases which have been in existence since 1973 (see Table 1). Based on annual averages, the 1979 average level for the Canada Consumer Price Index (CPI) was 9.1% above that of 1978, virtually unchanged from the advance of 9.0% registered between 1977 and 1978.

#### Vue d'ensemble

Ce supplément de fin d'année présente l'évolution des prix à la consommation en 1979 d'après les moyennes annuelles, c'est-à-dire les moyennes des 12 indices mensuels pour les années 1978 et de 1979. Cette approche offre l'avantage d'être moins influencée par des variations mensuelles inhabituelles et donne, par conséquent, une image plus fidèle de l'évolution des prix durant l'ensemble de l'année, que les variations en pourcentage d'une année sur l'autre obtenues en comparant l'indice du mois observé à celui du mois correspondant de l'année précédente (tableau 1).

L'année 1979 a de nouveau été caractérisée par la poursuite de l'évolution assez prononcée de la hausse des prix à la consommation qui s'est amorcée en 1973 (tableau 1). D'après les moyennes annuelles, l'indice des prix à la consommation (IPC) du Canada a grimpé de 9.1 % par rapport à 1978, soit pratiquement le taux de progression observé entre 1977 et 1978 (9.0 %).

As in the previous two years, the impact of the Food price movements contributed significantly to the annual average increase in the CPI in 1979, having been responsible for about one third of the overall increase. Between 1978 and 1979, the Food index rose by 13.2%, a rate of increase slightly less than the 15.5% increase registered in the corresponding 1977 to 1978 period. The index for Food for Home Consumption was up 13.5% between 1978 and 1979 while the Food Away from Home index rose 12.1%.

The index for All-items excluding Food advanced 7.9% between 1978 and 1979. This latest annual increase represents an acceleration in the rate of growth from the 6.4% gain registered between 1977 and 1978. Part of this acceleration in the rate of growth between 1978 and 1979 was due to the varying provincial retail sales tax reductions which had a dampening effect on the 1978 increases.

Table 2 provides detailed information on the annual average percentage movements of the main components of the CPI for the years 1977, 1978 and 1979 respectively.

Comme au cours des deux années précédentes, les prix des aliments ont exercé une forte influence sur l'augmentation annuelle moyenne de l'IPC en 1979; ils ont été à l'origine d'environ le tiers de la hausse globale. L'indice des aliments a grimpé de 13.2 % entre 1978 et 1979, contre 15.5 % entre 1977 et 1978, ce qui représente un faible ralentissement. L'indice des aliments consommés à la maison a monté de 13.5 % et celui des aliments consommés à la maison a monté de 12.1 % entre 1978 et 1979.

L'indice d'ensemble sans les aliments a progressé de 7.9 % entre 1978 et 1979, contre 6.4 % entre 1977 et 1978. Cette accélération du taux de croissance est attribuable pour une part aux diverses réductions de la taxe provinciale de vente au détail, qui ont eu pour effet d'atténuer les hausses enregistrées en 1978.

Le tableau 2 donne les variations annuelles moyennes en pourcentage des principales composantes de l'IPC pour les années 1977, 1978 et 1979.

## Major Contributors to the Annual Average CPI Rise

Approximately three quarters of the 9.1% advance in the All-items CPI between 1978 and 1979 was attributable to increases in the Food, Housing and Transportation indexes. The Clothing index whose level in 1978 was significantly affected by the reduction, as well as in one province, the elimination, of the provincial retail sales taxes, also had a noticeable impact on the overall annual advance in the CPI in 1979.

#### Food

As in 1978, a continued marked increase in the level of retail prices for beef cuts, up 31.5% on average between 1978 and 1979 contributed most significantly to the overall advance in the Food index. Most of the increase in 1979, however, was concentrated in the first quarter as during the rest of the year, a significant deceleration in the monthly movements was in evidence. Price increases associated with the Food Away from Home index advanced 12.1% on average between 1978 and 1979, up from the 6.6% increase registered in 1978; this also had a noticeable impact in the largest annual change in the Food index. Other notable price increases were registered for cereal and bakery products (up 16.9%), dairy products and eggs (up 9.0%) and for fruit and vegetables (up 9.3%). Within this latter category, the price increases experienced for fresh fruit (up 13.6%) and fresh vegetables (up 2.4%) were significantly lower than those withnessed in 1978 (up 32.5% and 26.8% respectively) resulting primarily from the improved growing conditions on the international scene. Price increases were also noted for sugar (up 16.3%) other meat products (up 29.8%), fish (up 11.2%) and for poultry (up 13.3%). Prices for coffee and tea declined 1.7% on average in 1979, although an acceleration in the monthly price movements was in evidence during the last three months of the year.

# Principaux facteurs de la hausse annuelle moyenne de l'IPC

Les aliments, l'habitation et les transports sont responsables pour près des deux tiers de l'augmentation de 9.1 % réalisée par l'IPC d'ensemble entre 1978 et 1979. Cette poussée de l'indice d'ensemble est due également pour une bonne part à l'indice de l'habillement dont la progression en 1978 avait été nettement ralentie par la réduction, et même l'élimination dans une province, de la taxe provinciale de vente au détail.

#### Aliments

Comme en 1978, le fort renchérissement au niveau des prix au détail des morceaux de boeuf, de 31.5 % en moyenne entre 1978 et 1979, est surtout responsable de la hausse de l'indice des aliments. Or, les prix ont surtout grimpé au cours du premier trimestre, car on a observé un net ralentissement des augmentations mensuelles durant le reste de l'année. Les prix des aliments consommés à l'extérieur ont crû de 12.1 % en movenne entre 1978 et 1979, comparativement à 6.6 % en 1978: cette hausse s'est également répercutée de façon appréciable sur l'augmentation annuelle sans précédent de l'indice des aliments. En outre, se sont accrus de façon sensible les prix des produits céréaliers et de boulangerie (+16.9%), des produits laitiers et des oeufs (+9.0%) et des fruits et légumes (+9.3 %). Parmi ces derniers, la majoration des prix des fruits frais (13.6 %) et des légumes frais (2.4 %) a été nettement inférieure à celle observée en 1978 (respectivement 325% et 26.8%) grâce surtout aux meilleures récoltes obtenues dans les divers pays. On a aussi observé un renchérissement du sucre (16.3 %), des autres produits de la viande (29.8 %), du poisson (11.2 %) et de la volaille (13.3 %). Les prix du café et du thé ont diminué en moyenne de 1.7 % en 1979, mais une reprise des hausses mensuelles s'est manifestée au cours du dernier trimestre.

#### Housing

Housing charges advanced by 7.0% on average in 1979, down from the 7.5% increase registered in 1978. This deceleration in the rate of growth was attributable to the shelter and household operation items. Shelter charges increased by 5.7% in 1979 as compared to a gain of 7.2% in 1978 with lower rates of growth being recorded for both rented and owned accommodation. Household operation charges, after registering an increase of 9.5% in 1978, increased by 8.9% in 1979 primarily reflecting a deceleration in the price movements for domestic gas, electricity and telephone charges. In contrast, an acceleration in the rate of price increase was observed for household furnishings and equipment, especially for furniture and major household appliances. Part of this increase in the rate of growth in comparison to 1978 was attributable to the dampening impact of the reduction in provincial retail sales taxes which affected the 1978 index levels.

#### Clothing

Clothing prices, on average, advanced by 9.2% in 1979 as compared to an annual average increase of 3.8% in 1978. Part of this deterioration in price performance in this component was attributable to the provincial retail sales tax reductions, especially in the province of Quebec, which had a dampening effect on the 1978 levels.

#### Transportation

Higher prices for new cars, up 12.1% on average in 1979 and increased automobile operation and maintenance charges (up 8.1%) were largely responsible for the 9.7% increase in Transportation costs. This annual average increase in the Transportation index compares to an average gain of 5.8% registered in 1978. Other notable increases were recorded for local transit and air fares.

#### Habitation

Les frais d'habitation ont augmenté de 7.0 % en moyenne en 1979, contre 7.5 % en 1978. Ce ralentissement du taux de croissance est attribuable au logement, et aux articles et des dépenses de ménage. Les frais des logements, tant loués que possédés, ont progressé à un taux moindre (5.7 % en 1979 contre 7.2 % en 1978). Les dépenses de ménage, en hausse de 9.5 % en 1978, se sont accrues de 8.9 % en raison principalement du plus faible taux de majoration des tarifs du gaz domestique, de l'électricité et du téléphone. Par contre, les articles d'ameublement et les accessoires, en particulier les meubles et les gros appareils ménagers, ont renchéri à un rythme plus rapide, du fait, pour une part, que la réduction de la taxe provinciale de vente au détail a eu pour effet de freiner la montée de l'indice en 1978.

#### Habillement

Les prix des vêtements ont augmenté en moyenne de  $9.2\,\%$  en 1979, contre  $3.8\,\%$  en 1978. Cette poussée des prix s'explique en partie par le fait que quelques taxes provinciale de vente au détail ont été réduites et celle du Québec a été supprimée en 1978.

#### **Transports**

Le renchérissement des voitures neuves, de 12.1 % en moyenne en 1979, et l'accroissement des frais de fonctionnement et d'entretien d'automobile de 8.1 %, sont les principales causes de la hausse de 9.7 % des frais de transports. L'indice des transports avait grimpé en moyenne de 5.8 % en 1978. Les tarifs du transport urbain et du transport aérien ont aussi augmenté de façon appréciable.

| Services   | 7.0          | 6.8          | 9.0          |

#### Health and Personal Care

The Health and Personal Care component advanced by 9.0% on average in 1979, up from the 7.2% registered in 1978. Health Care charges advanced by 9.8% while Personal Care costs increased by 8.4%.

#### Recreation, Reading and Education

Increased prices for seasonal recreational items, higher admission prices to spectator sports and increased magazine prices were the major factors in the 6.9% increase in the Recreation, Reading and Education component.

#### Tobacco and Alcohol

Tobacco and Alcohol prices rose on average by 7.2% in 1979, down from the 8.1% increase registered in 1978. The deceleration in the annual rate of growth was largely attributable to tobacco products which after advancing by 9.8% in 1978, increased by 5.4% in 1979. In contrast, prices for alcoholic beverages increased by 8.0% on average in 1979, up from the 6.5% increase registered in 1978.

#### **Goods and Services**

An examination of the CPI in the context of Goods and Services provides an additional insight to price movements during the year 1979. In 1979, the Goods component rose 10.6% on average over its 1978 level, while the Services component increased by 7.0%. Within the Goods component, over this corresponding period, the price level of durables was up 9.6%, that of semi-durables advanced 8.7% and non-durables, including food, increased 11.2%.

#### **City Consumer Price Movements**

The annual average movements between 1978 and 1979 in the All-items CPI's in cities for which CPI's are produced, ranged from 7.7% in Vancouver to 9.8% in St. John's (see Table 4). Increases equalling or in excess of the national average of 9.1% were recorded in six of the 15 cities. Over the period, there were considerable variations among cities in consumer price movements of the components. Food price increases ranged from 11.3% in Thunder Bay to 16.1% in St. John's; Housing charges varied from a 4.6% increase in Vancouver to an advance of 8.8% in Québec City; Clothing price increases ranged from 5.8% in Ouébec City to 12.2% in Winnipeg while Transportation costs recorded increases ranging from 7.0% in Calgary to 10.8% in Toronto. Among the other components, price increases ranging between 6.8% in Saint John to 10.6% in Toronto were registered in Health and Personal Care; between 5.2% in Montréal to 9.8% in St. John's were recorded in Recreation, Reading and Education and between 3.9% in Edmonton to 10.2% in Halifax were reported in Tobacco and Alcohol.

#### Santé et soins personnels

La composante Santé et soins personnels a monté de 9.0 % en moyenne en 1979, contre 7.2 % en 1978. Les soins de santé ont crû de 9.8 % et les soins personnels de 8.4 %.

#### Loisirs, lecture et formation

La majoration des prix des articles saisonniers de sport, des entrées aux spectacles sportifs et des revues explique en grande partie l'augmentation de 6.9 % de la composante Loisirs, lecture et formation.

#### Tabacs et boissons alcoolisées

Les prix des tabacs et des boissons alcoolisées ont grimpé de 7.2 % en moyenne en 1979, contre 8.1 % en 1978. Ce ralentissement du taux annuel de progression est principalement dû aux produits du tabac dont les prix ont monté de 5.4 % en 1979, contre 9.8 % en 1978. Par contre, les prix des boissons alcoolisées ont crû de 8.0 % en 1979, comparativement à 6.5 % en 1978.

#### Biens et services

L'étude de l'IPC sous l'angle des biens et services fait ressortir d'autres aspects des variations des prix en 1979. Les biens ont augmenté de 10.6 % et les services de 7.0 % en moyenne par rapport à 1978. Les prix des biens durables ont progressé de 9.6 %, ceux des biens semi-durables de 8.7 % et ceux des biens non durables, dont les aliments, de 11.2 %.

## Mouvements des prix à la consommation dans les villes

Entre 1978 et 1979, la hausse annuelle moyenne de l'IPC d'ensemble dans les villes pour lesquelles on produit un IPC a varié entre 7.7 % à Vancouver et 9.8 % à St. John's (voir le tableau 4). Des augmentations égales ou supérieures à la moyenne nationale de 9.1 % ont été enregistrées dans six des 15 villes. Au cours de la période observée, on a noté des variations considérablement différentes entre les villes. Les hausses des prix des aliments vont de 11.3 % à Thunder Bay à 16.1 % à St. John's; celles des frais de logement vont de 4.6 % à Vancouver à 8.8 % à Québec; celles des prix des vêtements vont de 5.8 % à Québec à 12.2 % à Winnipeg; celles des frais de transports vont de 7.0 % à Calgary à 10.8 % à Toronto. On a également observé des augmentations allant de 6.8 % à Saint John à 10.6 % à Toronto pour la santé et les soins personnels, de 5.2 % à Montréal à 9.8 % à St. John's pour les loisirs, la lecture et la formation, et de 3.9 % à Edmonton à 10.2 % à Halifax pour les tabacs et boissons alcoolisées.

### Symbols

The following standard symbols are used in Statistics Canada publications:

- . . figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- - amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

#### NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification number, by which data may be retrieved from CANSIM, are given in the headings of the relevant series shown in the publication. For further information on CANSIM call (613) 995-7406 or write Chief, Current Economic Analysis Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

### Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- - nombres infimes.
- P nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

#### **NOTE CONCERNANT CANSIM**

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 995-7406 ou écrire au chef, Division des analyses de conjoncture, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A 0T6.

#### Introduction

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, *The Consumer Price Index*, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements for each of the three months in the reference quarter, at both the urban Canada and the regional cities' level. This is presented in the form of descriptive analysis supported by tabular and graphic information.

Part II provides a detailed historical summary of monthly consumer price index movements in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Place-to-place comparative retail price information forms Part III of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 to 6 present background information relating to place-to-place retail price comparisons.

#### Introduction

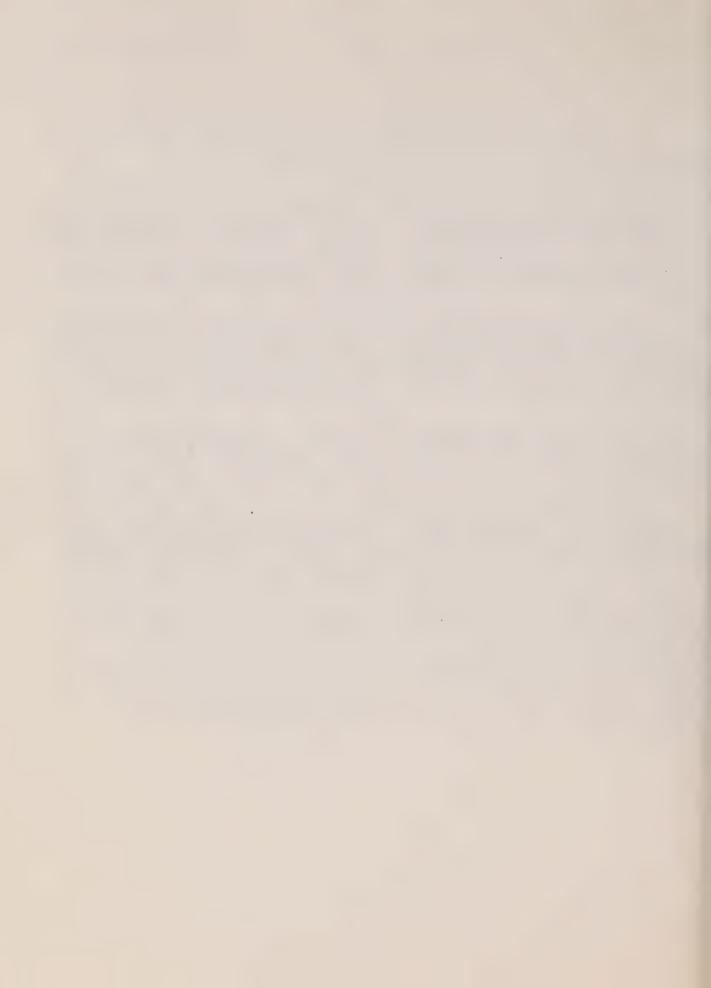

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, L'indice des prix à la consommation, nº 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation de chaque mois du trimestre pour le Canada et les agglomérations urbaines. Ces informations sont présentées sous la forme d'analyses descriptives appuyées de tableaux et de graphiques.

La partie II fournit un résumé historique détaillé des mouvements mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagrégé.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie III de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices des différences des prix de détail entre les villes.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contient les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthodologie des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 à 6 fournit des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

Part I

Current Consumer Price Indexes

Partie I

Indices des prix à la consommation courants

#### Canada

The All-items Consumer Price Index for Canada (1971 = 100) increased by 0.7% from a level of 194.5 in September to 195.9 in October. As a result, the 12-month rise between October 1978 and October 1979 stood at 9.3%, down from the 9.6% registered in the previous 12-month period. The All-items excluding Food index advanced by 0.8% in October, down from the 1.1% increase registered in the previous month. The Food index increased by 0.7% in October up from the 0.2% registered in September.

Higher prices for fresh vegetables, especially for lettuce and tomatoes resulting from the end of local supplies for these items, and for selected beef cuts, cereal products, sugar and coffee were largely responsible for the 0.6% increase in the Food at Home index. Dampening the impact of these increases were lower prices for fresh fruit and turkey. In October, the Food at Home index stood 12.3% above its level in October 1978. The Food away from Home index rose by 0.9% in October, resulting in an increase of 12.5% over its level in October 1978.

Increased Housing charges and Transportation costs together accounted for about three-fifths of the 0.8% increase in the Allitems excluding Food index. Within the Housing component, higher owned accommodation charges were registered reflecting, among other things, increased 1979 property taxes in all provinces except Newfoundland, Alberta and British Columbia, coupled with higher rates for water and domestic gas in several cities. Within the transportation component, increases were recorded for air fares, selected new 1979 North American model cars and for gasoline. Other notable contributing factors included higher prices for seasonal outdoor recreation items, increased theatre and sports admission prices and, in several provinces, higher university tuition fees. Increased prices were also registered for selected men's and women's seasonal clothing items. Between October 1978 and October 1979, the index for All-items excluding Food advanced by 8.4%, slightly less than the 8.6% increase registered in the previous 12-month period.

Viewed in terms of goods and services, the price level for goods, including food, advanced by 0.6% in this month, while that for services increased by 0.9%. As a result, between October 1978 and October 1979, the price level for goods advanced by 10.4%, while that for services rose by 7.5%.

On a seasonally-adjusted basis, the All-items Consumer Price Index rose by 0.6% between September and October; this comprised a 1.0% increase in the Food index and a 0.5% increase in the All-items excluding Food index.

#### City Highlights

Between September and October, consumer prices rose in all cities for which CPI's are produced with increases ranging from 0.1% in Vancouver to 1.0% in Québec City. A decline in property taxes resulting from an increase in provincial rebates was the principal factor accounting for the lower increase in Vancouver, while in Québec City, the larger than national average increase in consumer prices resulted primarily from an increase in admission prices for spectator sports. Property taxes increased in most other cities with the exception of Edmonton and Calgary where decreases were observed and in St. John's where they remained unchanged. The increase in new 1979 North American model car prices and in air fares affected all cities.

#### OCTOBRE 1979

#### Canada

L'indice d'ensemble des prix à la consommation pour le Canada (1971 = 100) a progressé de 0.7 %, ayant passé de 194.5 en septembre à 195.9 en octobre. En conséquence, l'augmentation sur 12 mois, d'octobre 1978 à octobre 1979, se chiffre à 9.3 %, en baisse par rapport à celle de 9.6 % enregistrée de septembre 1978 à septembre 1979. L'indice d'ensemble sans les aliments a progressé de 0.8 % en octobre, ce qui représente une hausse moins forte que celle de 1.1 % enregistrée en septembre. L'indice des prix des aliments, après avoir augmenté de 0.2 % en septembre, a avancé de 0.7 % en octobre.

La progression de 0.6 % de l'indice des aliments consommés à la maison est due, dans une large mesure, au renchérissement des légumes frais (notamment de la laitue et des tomates, dont les cultures locales sont épuisées), de certains morceaux de boeuf, des produits céréaliers, du sucre et du café. Par contre, cet accroissement a été partiellement neutralisé par le fléchissement des prix des fruits frais et de la dinde. En octobre, l'indice des aliments consommés à la maison a dépassé de 12.3 % le niveau atteint en octobre 1978. L'indice des aliments consommés à l'extérieur a monté de 0.9 % en octobre, ce qui représente une hausse de 12.5 % sur le niveau observé en octobre 1978.

La majoration des frais d'habitation et de transport sont, ensemble, responsables pour les trois cinquièmes environ de la croissance de 0.8 % de l'indice d'ensemble sans les aliments. S'agissant de l'habitation, les frais de logement en propriété ont augmenté en raison surtout de la hausse des impôts fonciers de 1979 dans toutes les provinces sauf Terre-Neuve, l'Alberta et la Colombie-Britannique, et aussi à cause du renchérissement de l'eau et du gaz pour consommation domestique dans plusieurs villes. Quant aux transports, les tarifs aériens et les prix de l'essence et des modèles 1979 de certaines voitures nord-américaines ont été à la hausse. On a également enregistré un accroissement des prix de certains articles récréatifs d'extérieur (saisonniers), des entrées au théâtre et aux spectacles sportifs et, dans plusieurs provinces, des frais de scolarité universitaires. Les prix de certains articles d'habillement saisonniers pour hommes et pour femmes ont aussi grimpé. D'octobre 1978 à octobre 1979, l'indice d'ensemble sans les aliments a progressé de 8.4 %, contre 8.6 % entre septembre 1978 et septembre 1979.

Du point de vue des biens et services, les prix des biens, y compris des aliments, ont monté de 0.6 % au cours du mois, tandis que ceux des services ont avancé de 0.9 %. Le niveau des prix s'est donc élevé de 10.4 % pour les biens et de 7.5 % pour les services entre octobre 1978 et octobre 1979.

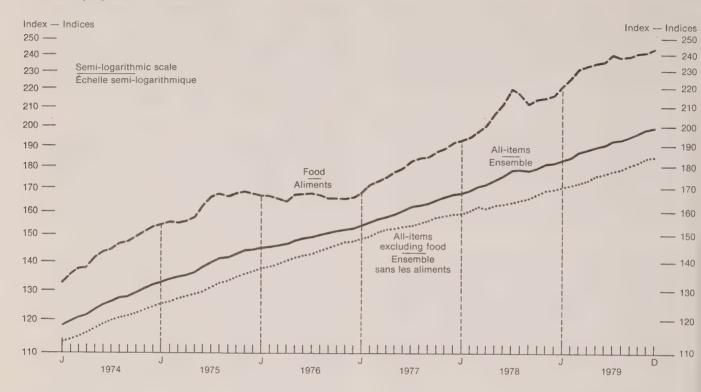

Après désaisonnalisation, l'indice d'ensemble des prix à la consommation s'est haussé de 0.6~% de septembre à octobre, sous l'effet d'une augmentation de 1.0~% de l'indice des prix des aliments et de 0.5~% de l'indice d'ensemble sans les aliments.

#### Points saillants des indices des villes

De septembre à octobre, les prix à la consommation ont crû dans toutes les villes pour lesquelles on produit un IPC, la hausse variant de 0.1 % à Vancouver à 1.0 % à Québec. L'augmentation moins forte à Vancouver est surtout imputable à la baisse des impôts fonciers occasionnée par la majoration des remboursements provinciaux, tandis que la progression à Québec, plus forte que celle observée au niveau national, découle principalement du renchérissement des entrées aux spectacles sportifs. La croissance des impôts fonciers a touché la plupart des autres villes sauf à Edmonton et à Calgary où des diminutions ont été enregistrées et à St. John's où aucune variation n'a été observée. Par ailleurs, la hausse des tarifs aériens et des prix des modèles de 1979 des voitures nord-américaines a été ressentie dans toutes les villes.

#### Canada

The All-items Consumer Price Index for Canada (1971=100) increased by 1.0% from a level of 195.9 in October to 197.8 in November. As a result, the 12-month rise between November 1978 and November 1979 stood at 9.4%, up marginally from the 9.3% registered in the previous 12-month period. Higher transportation costs and increased housing charges were the major factors in the overall monthly CPI rise, having been responsible for about two thirds of the increase. The All-items excluding Food index advanced by 1.2% in November, up from the 0.8% increase registered in the previous month. In contrast, the Food index rose by 0.2% in November, down from the 0.7% rise registered in October.

The 0.2% increase in the Food index was largely attributable to higher prices for restaurant meals. The Food away from Home index rose by 0.9% in November, resulting in an increase of 12.0% over its level in November 1978. The Food at Home index rose by 0.1% as lower prices for selected beef and pork cuts and for fresh fruit dampened the impact of higher prices for dairy products, especially in the provinces of Ontario and Saskatchewan and for turkey, sugar and coffee. In November, the Food at Home index stood at 12.3% above its level in November 1978.

Higher 1980 new car retail purchase prices which on average, after adjustment for quality changes, were up 4.7% over the October prices for the 1979 model cars, coupled with increased automobile operation and maintenance charges, were largely responsible for the 1.2% rise in the index for All-items excluding Food. As well. within the transportation component, higher air fares were also recorded. Within the housing component, increases were registered for both rented and owned accommodation, fuel oil and for household furnishings and equipment. Other notable contributing factors included higher prices for selected men's and boys' clothing items and increased charges for clothing services. Price increases were also registered for dental care, haircuts and hairdressing services and for alcoholic beverages consumed in licensed premises. Between November 1978 and November 1979, the index for All-items excluding Food advanced by 8.6%, up from the 8.4% increase registered in the previous 12-month period.

Viewed in terms of goods and services, the price level for goods, including food, advanced by 1.0% in this month, while that for services increased by 0.8%. As a result, between November 1978 and November 1979, the price level for goods advanced by 10.7%, while that for services rose by 7.6%.

On a seasonally-adjusted basis, the All-items Consumer Price Index rose by 0.9% between October and November; this comprised a 0.5% increase in the Food index and a 1.0% increase in the Allitems excluding Food index.

#### City Highlights

Between October and November, consumer prices rose in all cities for which CPI's are produced with increases ranging from 0.4% in Charlottetown/Summerside to 1.7% in St. John's. Higher food prices and increased electricity rates were the principal factors accounting for the larger than national average increase in consumer prices in St. John's, while in Charlottetown/Summerside, the lower increase primarily reflects a decline in electricity rates. The increase in 1980 car prices, automobile operation and maintenance charges and in air fares affected all cities.

#### NOVEMBRE 1979

#### Canada

L'indice d'ensemble des prix à la consommation pour le Canada (1971=100) a progressé de 1.0 %, ayant passé de 195.9 en octobre à 197.8 en novembre. En conséquence, l'augmentation sur 12 mois, de novembre 1978 à novembre 1979, se chiffre à 9.4 %, ce qui représente une faible hausse par rapport à celle de 9.3 % enregistrée entre octobre 1978 et octobre 1979. Les frais de transport et d'habitation qui ont été les principaux responsables de la hausse mensuelle globale de l'IPC, ont contribué pour environ les deux tiers à la hausse mensuelle de l'IPC. L'indice d'ensemble sans les aliments a progressé de 1.2 % en novembre, contre 0.8 % le mois précédent. En revanche, l'indice des aliments a grimpé de 0.2 %, ce qui représente une hausse moins forte que celle de 0.7 % enregistrée le mois précédent.

La progression de 0.2 % de l'indice des aliments est due, dans une large mesure, à l'augmentation des prix des repas pris à l'extérieur. L'indice des aliments consommés à l'extérieur a monté de 0.9 % en novembre, ce qui représente une hausse de 12.0 % sur le niveau observé en novembre 1978. L'indice des aliments consommés à la maison a crû de 0.1 %, le fléchissement des prix de certains morceaux de boeuf et de porc et des fruits frais ayant atténué le renchérissement des produits laitiers, en particulier en Ontario et en Saskatchewan, ainsi que de la dinde, du sucre et du café. Cet indice a été de 12.3 % supérieur au niveau de novembre 1978.

La majoration des prix de détail des voitures neuves de 1980, de 4.7 % en moyenne, compte tenu des changements qualitatifs, par rapport aux prix observés en octobre pour les voitures de 1979, et l'augmentation des frais d'utilisation et d'entretien des automobiles ont été les principales responsables de la hausse de 1.2 % réalisée par l'indice d'ensemble sans les aliments. En outre, la composante des transports a pris en compte une majoration des tarifs aériens. Dans la composante de l'habitation, les charges de logement en propriété et en location, le coût du mazout et le prix des articles d'ameublement et des accessoires ont monté. On a également constaté un accroissement des prix de certains articles d'habillement pour hommes et garçons et du coût des soins de vêtements. Les soins dentaires, les coupes de cheveux et les services de coiffure, ainsi que les boissons alcoolisées consommées dans les débits ont aussi connu des augmentations de prix. De novembre 1978 à novembre 1979, l'indice d'ensemble sans les aliments a progressé de 8.6 %, contre 8.4 % entre octobre 1978 et octobre 1979.

Du point de vue des biens et services, les prix des biens, y compris des aliments, ont monté de 1.0 % au cours du mois, tandis que ceux des services ont avancé de 0.8 %. Le niveau des prix s'est donc élevé de 10.7 % pour les biens et de 7.6 % pour les services entre novembre 1978 et novembre 1979.

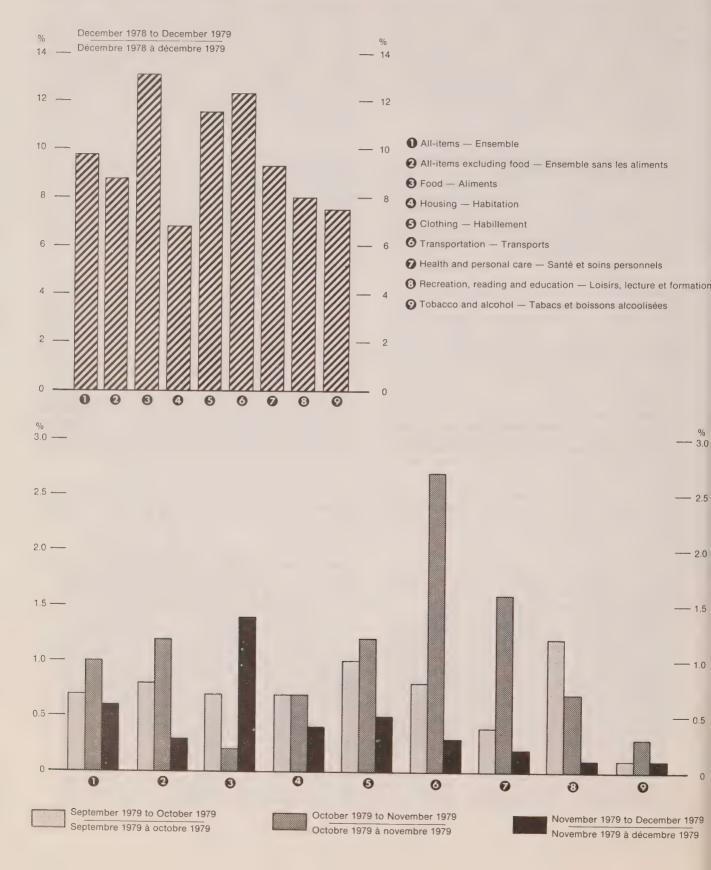

Après désaisonnalisation, l'indice d'ensemble des prix à la consommation s'est haussé de  $0.9\,\%$  entre octobre et novembre, sous l'effet d'une augmentation de  $0.5\,\%$  de l'indice des aliments et de  $1.0\,\%$  de l'indice d'ensemble sans les aliments.

#### Points saillants des indices des villes

Entre octobre et novembre, les prix à la consommation ont augmenté dans toutes les villes pour lesquelles on produit un IPC, les hausses variant de 0.4 % à Charlottetown/Summerside et 1.7 % à St. John's. Le renchérissement des aliments et la majoration des tarifs d'électricité sont les principales causes de l'accroissement supérieur à la moyenne nationale des prix à la consommation enregistré à St. John's alors que la faible hausse constatée à Charlottetown/Summerside s'explique surtout par la diminution des tarifs d'électricité. L'augmentation des prix des automobiles de 1980, des frais d'utilisation et d'entretien des automobiles et des tarifs aériens a été ressentie dans toutes les villes.

Percentage Change in the Consumer Price Index and its Major Components

Taux de variation de l'indice des prix à la consommation et de ses principales composantes

#### DECEMBER 1979

#### Canada

The All-items Consumer Price Index for Canada (1971=100) increased by 0.6% from a level of 197.8 in November to 199.0 in December. As a result, the 12-month rise between December 1978 and December 1979 stood at 9.8%, up from the 9.4% registered in the previous 12-month period. Higher Food prices and increased Housing charges were the major factors in the overall monthly CPI rise, having been responsible for about three quarters of the increase. The Food index rose by 1.4% in this month, up from the 0.2% rise registered in November. The All-items excluding Food index increased by 0.3% in December, down from the 1.2% advance registered in the previous month.

Higher prices for selected beef cuts and for fresh vegetables, up 4.2% and 10.4% respectively on average in early December were largely responsible for the 1.6% increase in the Food at Home index. Also contributing to the increase were higher prices for selected bakery and dairy products and for sugar. The effect of these price increases was slightly dampened as lower prices were registered for selected pork cuts, turkey and for fresh fruit. In December, the Food at Home index stood 13.5% above its level in December 1978. The Food away from Home index advanced 0.5% in early December, representing an increase of 11.8% over the same month in 1978.

Higher shelter charges and increased prices for gasoline were largely responsible for the 0.3% increase in the index for All-items excluding Food. Other notable price increases were registered for selected women's wear items and for furniture and appliances. Higher train and air fares were also recorded. The impact of these price increases was somewhat dampened by lower effective prices for selected new North American model cars and by a reduction in telephone charges in the province of British Columbia. Between December 1978 and December 1979, the index for All-items excluding Food advanced by 8.8%.

Viewed in terms of goods and services, the price level for goods advanced by 0.8% in this month, while that for services increased by 0.2%. As a result, between December 1978 and December 1979, the price level for goods advanced by 11.3%, while that for services rose by 7.5%.

On a seasonally-adjusted basis, the All-items Consumer Price Index rose by 0.8% between November and December; this comprised a 1.6% increase in the Food index and a 0.5% increase in the All-items excluding Food index.

#### City Highlights

Between November and December, consumer prices rose in all cities for which CPI's are produced with increases ranging from 0.3% recorded in both Halifax and Ottawa to a 0.8% increase registered in Winnipeg, Regina and Calgary. The major factors which contributed to this variation in city price movements were the differing rates of price movements for food, clothing and gasoline.

#### DÉCEMBRE 1979

#### Canada

L'indice d'ensemble des prix à la consommation pour le Canada (1971 = 100) a progressé de 0.6 %, ayant passé de 197.8 en novembre à 199.0 en décembre. En conséquence, l'augmentation sur 12 mois, soit de décembre 1978 à décembre 1979, se chiffre à 9.8 %, en hausse par rapport à celle de 9.4 % enregistrée entre novembre 1978 et novembre 1979. La progression des prix des aliments et des frais de logement ont été responsables des trois quarts environ de la hausse mensuelle globale de l'IPC. L'indice des aliments a grimpé de 1.4 % en décembre, contre 0.2 % le mois précédent. L'indice d'ensemble sans les aliments a progressé de 0.3 %, ce qui représente un ralentissement par rapport à l'augmentation de 1.2 % enregistrée en novembre.

Le renchérissement de certains morceaux de boeuf et des légumes frais, respectivement de 4.2 % et de 10.4 % en moyenne au début de décembre, explique principalement la hausse de 1.6 % de l'indice des aliments consommés à la maison. Les prix de certains produits de boulangerie, de certains produits laitiers et du sucre ont aussi augmenté. Cette poussée a été ralentie quelque peu par le fléchissement des prix de certains morceaux de porc, de la dinde et des fruits frais. En décembre, l'indice des aliments consommés à la maison a dépassé de 13.5 % le niveau atteint l'année précédente. L'indice des aliments consommés à l'extérieur a progressé de 0.5 % au début de décembre, ce qui représente une hausse de 11.8 % par rapport au mois correspondant de 1978.

La hausse des frais de logement et la majoration des prix de l'essence sont les principaux responsables de l'augmentation de 0.3 % de l'indice d'ensemble sans les aliments. Les prix de certains articles d'habillement pour femmes et ceux des meubles et des appareils ménagers ont également grimpé de façon appréciable. Les tarifs de train et d'avion ont aussi été majorés. L'impact de ces augmentations a été en partie compensé par une diminution des prix réels de certains modèles de voitures nord-américaines neuves, ainsi qu'une réduction des frais du téléphone dans la province de Colombie-Britannique. De décembre 1978 à décembre 1979, l'indice d'ensemble sans les aliments a crû de 8.8 %.

Du point de vue des biens et services, les prix des biens ont monté de 0.8 % au cours du mois, tandis que ceux des services ont avancé de 0.2 %. Le niveau des prix s'est donc élevé de 11.3 % pour les biens et de 7.5 % pour les services entre décembre 1978 et décembre 1979.

Après désaisonnalisation, l'indice d'ensemble des prix à la consommation s'est haussé de  $0.8\,\%$  entre novembre et décembre, sous l'effet d'une augmentation de  $1.6\,\%$  de l'indice des aliments et de  $0.5\,\%$  de l'indice d'ensemble sans les aliments.

#### Points saillants des indices des villes

Entre novembre et décembre, les prix à la consommation ont augmenté dans toutes les villes pour lesquelles on produit un IPC, les hausses variant entre 0.3 % à Halifax et Ottawa et 0.8 % à Winnipeg, Regina et Calgary. Les mouvements inégaux des prix des aliments, des vêtements et de l'essence sont la principale cause de la différence des hausses d'une ville à l'autre.

#### October, November and December - In Retrospect

The All-items Consumer Price Index for Canada (1971=100) advanced 2.3% in the fourth quarter 1979 rising from a level of 194.5 in September to 199.0 in December. This latest increase exceeded the 2.0% rise registered in the third quarter 1979 and the 2.1% advance recorded in the corresponding fourth quarter 1978.

The combined effects of higher transportation costs, up 3.9% in the latest quarter, increased housing charges, up 1.9%, and higher food prices, up 2.3%, accounted for over three quarters of the overall 2.3% increase in the All-items index. Increased clothing prices, up 2.7%, also impacted on the total increase.

Food prices rose by 2.3% in the fourth quarter after registering increases of 7.1%, 2.0% and 1.2% in the first, second and third quarters respectively. The latest increase was largely due to higher prices for fresh vegetables, beef, selected cereal and bakery products, sugar, coffee and food consumed away from home. The impact of these advances was dampened by lower prices for fresh fruit, pork and turkey.

The index for All-items excluding Food rose 2.3% in the fourth quarter, the same rate of increase observed in the third quarter. Higher prices for new automobiles, gasoline and increased air fares, combined with increased shelter and household operation charges and higher prices for selected furniture and clothing items were the major sources of upward pressure in the latest rise in this index. A noticeable proportion of the increased housing and transportation charges resulted from higher direct energy charges, up 3.0% in the fourth quarter.

In the 12-month period December 1978 to December 1979, the All-items CPI rose 9.8% comprising increases of 13.1% in the Food index and 8.8% in the All-items excluding Food index. These latest advances correspond with 12-month increases ending December 1978 of 8.4% in the All-items index, 12.8% in the Food index and 6.6% in the All-items excluding Food index.

#### Octobre, novembre et décembre - En rétrospective

L'indice d'ensemble des prix à la consommation du Canada (1971 = 100) a progressé de 2.3 % au quatrième trimestre de 1979, ayant passé de 194.5 en septembre à 199.0 en décembre. La hausse est supérieure à celle de 2.0 % enregistrée au troisième trimestre de 1979 et à l'accroissement de 2.1 % observé au quatrième trimestre de 1978.

Les frais de transport ( $\pm$  3.9%), les prix des aliments ( $\pm$  2.3%) et les frais d'habitation ( $\pm$  1.9%) sont intervenus pour plus des trois quarts de l'augmentation globale de 2.3%. Les prix des vêtements, en hausse de 2.7%, ont eu un effet non négligeable.

Les prix des aliments ont grimpé de 2.3 % au quatrième trimestre après avoir monté de 7.1 % au premier, de 2.0 % au deuxième et de 1.2 % au troisième. Le renchérissement observé au dernier trimestre est surtout imputable aux légumes frais, au boeuf, à certains produits céréaliers et de boulangerie, au sucre, au café et aux aliments consommés à l'extérieur. Par contre, ces hausses ont été partiellement neutralisées par la baisse des prix des fruits frais, du porc et de la dinde.

L'indice d'ensemble sans les aliments a connu le même taux de croissance au quatrième trimestre qu'au troisième, soit 2.3 %. Les principaux facteurs ont été le renchérissement des voitures neuves, de l'essence et de certains articles d'ameublement et d'habillement, ainsi que la majoration des tarifs aériens, des frais de logement et des dépenses de ménage. L'augmentation des frais de logement et de transport a été provoquée, dans une mesure appréciable, par les coûts directs de l'énergie, en hausse de 3.0 % au quatrième trimestre.

Dans les 12 mois allant de décembre 1978 à décembre 1979, l'IPC d'ensemble a progressé de 9.8 %, l'indice des aliments ayant crû de 13.1 % et l'indice d'ensemble sans les aliments, de 8.8 %. Les gains correspondants pour la période se terminant en décembre 1978 se sont respectivement chiffrés à 8.4 %, 12.8 % et 6.6 %.

| January — Janvier February — Février March — Mars April — Avril May — Mai June — Juin July — Juillet August — Août September — Septembre Cotober — Octobre November — Novembre December — Décembre  (1) — For some alaboration of methes |  |   |  |  |  |   |   |  |  |

For some elaboration of methodology, see Appendix 1. — Pour de plus amples détails sur la méthodologie, consulter appendice 1.

For an explanation of the non-availability of data previous to October 1978, see Appendix 3, Section B(2). — Une explication de l'absence de données pour la periode precedant octobre 1978 es trouve à la section B(2) de l'appendice 3.

Seasonally adjusted data are revised annually using updated seasonal adjustment factors. For more information, refer to Appendix 3. Les données desaisonnalisées sont revisées annuellement afin d'introduire des facteurs de désaisonnalisation plus récents. Pour de plus amples renseignements, voir appendice 3.

As of October 1978 indexes are based on 1974 expenditure weights and are linked to their predecessor at September 1978. For further explanation see "Notes on the Consumer Price Index", Appendix 1. — A partir d'octobre 1978 les indices sont calcules à l'aide des pondérations fondées sur les dépenses de 1974 et sont raccordés aux indices précédents en septembre 1978. Pour de plus amples renseignements voir les "Notes sur l'indice des prix à la consommation" Appendice 1.

1974 = 100

Reconstructed series. — Séries reconstruites.

Includes gasoline, motor oil, domestic gas, fuel oil and electricity. — Comprend l'essence, l'huile à moteur, le gaz domestique, le mazout et l'électricité.

The Consumer Price Index for All-items and seven major components by cities have been revised with the release of data for October 1978 to correct for methodological differences in the construction of the Canada and city series. For further details see, The Consumer Price Index, Revision based on 1974 Expenditures Concepts and Procedures, (occasional) Catalogue 62-546. — L'indice d'ensemble des prix à la consommation et ses sept composantes principales par ville, ont ête révisés avec l'emission d'octobre 1978 afin de tenir compte des differences in méthodologiques qui existaient pour la construction des séries du Canada et des villes. Pour de plus amples informations voir, l'Indice des prix à la consommation, révision fondée sur les dépenses de 1974 concepts et procédés (hors-série) no. 62-546 au catalogue.

These indexes measure the percentage change in consumer price levels between cities; for inter-city indexes of retail prices differentials, refer to Appendix 5 of this publication. — Ces indices measurent la variation en pourcentage des prix à la consommation dans chaque ville par rapport à l'année de base. Ils ne comparent pas les niveaux des prix d'une ville à l'autre; pour les indices comparatifs des prix de détail, se reporter à l'appendice 5 de cette publication.

| (1)      | For explanatory notes and detailed item spec | incations see App         | endix 4.       |  |                |                |                |                |                |

For explanatory notes and detailed item specifications see Appendix 4.

In some cases, blanks appear in this table where the quality and (or) quantity of the prices were insufficient to produce a good average. In other cases, the price volatility of certain items and the methodology for calculating updated average prices do not permit their publication. See Section 4 of Appendix 4 for further explanation.

Converted from one quart to one litre for most cities of the province of Ontario.

Saint John (N,B.), Halifax, Regina, Saskatoon, Edmonton, Calgary (20 ounces). St. John's (Nfid.), Montréal, Ottawa, Toronto, Thunder Bay, Winnipeg, Vancouver (24 ounces). Québec City (32 ounces).

Pour de plus amples renseignements, voir appendice 5.
Les poids indiqués sont les poids pour 1974 figurant dans L'indice des prix à la consommation Révision fondée sur les dépenses de 1974. Concepts et Procédés, Hors série (no 62-546 au catalogue de Statistique Canada). Ils ne sont présentés qu'à titre documentaire; les poids utilisés en fait sont le poids des villes combinées ajustés en fonction des variations des prix observées depuis 1974.

## THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to price movements.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the movement of prices in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of grocery items are published separately in Appendix 3, Section C.

## Coverage

Beginning with October 1978, the weights used in the Consumer Price Index are those pertaining to 1974 expenditure patterns. Data used for establishing these patterns were obtained through the 1974 Family Expenditure Surveys. The expenditures are those reported by all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. The 1971 Census of Canada revealed 59 such urban centres.

Separate CPI's are published for 15 of these centres which, together, accounted for approximately 70% of the total 1974 current consumption expenditures reported in the 59 centres. These 15 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 400 commodities are priced in each of these 15 cities while in the remaining 44 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

### **Prices**

The prices used in the calculation of the CPI are retail prices inclusive of all sales, excise and other

# Appendice 1

# L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement du mouvement des prix.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le mouvement des prix dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles d'épicerie sont publiées à part dans l'appendice 3, section C.

# Champ d'observation

À compter d'octobre 1978, les pondérations utilisées pour l'indice des prix à la consommation se rapportent aux schémas des dépenses de 1974. Les données qui ont servi à établir ces schémas proviennent des Enquêtes sur les dépenses des familles de 1974. Les dépenses sont celles qu'ont déclarées tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. Selon le recensement du Canada de 1971, ces centres urbains sont au nombre de 59.

Des IPC distincts sont publiés pour 15 centres qui, ensemble, interviennent pour près de 70 % du total des dépenses courantes de consommation déclarées en 1974 par les 59 centres. Les 15 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 400 produits dans chacune des 15 villes; ce nombre est plus faible dans les 44 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

### Prix

Les prix servant au calcul de l'IPC sont les prix au détail et englobent toutes les taxes de vente, d'accise et autres taxes

taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected in judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

# Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically revised. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods. For the period April 1973 to September 1978, the 1967 family expenditure patterns (and within the food component, the 1969 detailed spending patterns) were used, while for October 1978 forward, the indexes are based on the 1974 expenditure patterns.

## Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont révisées périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes. Entre avril 1973 et septembre 1978, les habitudes des dépenses des familles de 1967 ont servi à établir les pondérations (les pondérations internes de la composante alimentation, sont basées sur les habitudes des dépenses détaillées de 1969) tandis qu'à partir d'octobre 1978, l'indice est calculé d'après les habitudes des dépenses de 1974.

TEXT TABLE I. Comparison of 1967 and 1974 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF I. Comparaison des pondérations des dépenses de 1967 et de 1974 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

<sup>1</sup> Figures may not add up due to rounding.

Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

These weights represent expenditures in 1974 (1974 quantities valued in 1974 prices) and in 1967 (1967 quantities valued in 1967 prices). They cannot be used to reconstruct or reaggregate indexes on a 1971=100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the address shown below.

The indexes based on 1974 weights were linked or connected in September 1978 to the appropriate indexes based on 1967 weights which had been in use since May 1973. This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level of an aggregate index to fall slightly outside the range of its component indexes.

## Time Base

The Consumer Price Index for Canada and each index city is expressed in terms of 1971=100, except for Charlottetown - Summerside and for certain items, as noted, where the pricing survey was introduced in more recent years.

# **Current Annual Rate of Change**

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 3 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level and raising it to an annual rate (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", Retail Prices and Living Costs — Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

### Reconstructed Indexes

With the release of the October 1978 Consumer Price Index, certain series were reconstructed historically to reflect more closely the Standard Commodity Classification system and the Family Expenditure categories of Statistics Canada. For further details see The Consumer Price Index Revision Based on 1974 Expenditures, Concepts and Procedures (Occasional) Catalogue 62-546.

## **Revised City Indexes**

With the release of the October 1978 Consumer Price Index, certain city indexes were revised historically to correct for methodological differences which Ces pondérations représentent les dépenses en 1974 (quantités et prix de 1974) et en 1967 (quantités et prix de 1967). Elles ne peuvent servir à reconstituer ni à composer des indices sur la base de 1971=100. La méthode à suivre pour une telle reconstitution peut être obtenue sur demande auprès de la section dont l'adresse est donnée plus loin.

Les indices fondés sur les pondérations de 1974 ont été enchaînés ou raccordés en septembre 1978 aux indices correspondants fondés sur les pondérations de 1967, en usage depuis mai 1973. Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, l'indice composé pourrait ainsi dépasser légèrement l'étendue des indices de ces composantes.

## Période de base

L'indice des prix à la consommation du Canada et de chaque ville est exprimé sur la base de 1971=100, sauf pour Charlottetown-Summerside et pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduit qu'au cours des années plus récentes.

### Taux de variation annuel courant

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 3 consiste à prendre un taux de croissance composé sur le niveau désaisonnalisé des trois derniers mois et à le porter à un taux annuel (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", *Prix de détail et coût de la vie* — Bulletin de service (nº 62-005 au catalogue) vol. 4, nº 4, avril 1975.

### Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation d'octobre 1978, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent plus fidèlement le système de la Classification type des produits et les catégories des Dépenses des Familles établis par Statistique Canada. Pour de plus amples informations voir L'Indice des prix à la consommation, Révision fondée sur les dépenses de 1974, Concepts et Procédés (hors-série), nº 62-546 au catalogue.

### Revision des indices des villes

Avec l'émission de l'Indice des prix à la consommation d'octobre 1978, certains indices historiques des villes ont été reconstruits pour tenir compte des différences

previously existed in the construction of these indexes at the Canada and city levels. For further details see *The Consumer Price Index Revision Based on 1974 Expenditures, Concepts and Procedures* (Occasional) Catalogue 62-546.

# Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in *The Consumer Price Index Revision Based on 1974 Expenditures, Concepts and Procedures* (Occasional), Catalogue 62-546. Information regarding the Family Expenditure Survey is contained in the *Urban Family Food Expenditure Survey, 1974*, Catalogue 62-542, and *Urban Family Expenditure Survey, 1974*, Catalogue 62-544.

méthodologiques qui existaient au niveau de la construction de ces indices entre le Canada et les villes. Pour de plus amples informations voir *L'Indice des prix*, révision fondée sur les dépenses de 1974, Concepts et Procédés (hors-série), nº 62-546 au catalogue.

# Renseignements supplémentaires et publications connexes

L'Indice des prix à la consommation — Révision fondée sur les dépenses de 1974, Concepts et Procédés (hors-série), n° 62-546 au catalogue, décrit en détail les méthodes et concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se trouvent dans Dépenses alimentaires des familles urbaines, 1974, n° 62-542 au catalogue, et Dépenses des familles urbaines, 1974, n° 62-544 au catalogue.

# Appendix 2

# THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1975, compared with their average level in 1971, consumer prices as measured by the CPI were 32.4% higher, so that an equivalent basket of goods and services which could be purchased for \$100 in 1971 would cost the consumer \$132.40 in January 1975. Each consumer dollar in January 1975, therefore, buys less than in 1971 and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1975 the purchasing power of the 1971 consumer dollar declined to approximately 76 cents (\$1.00 x 100.00/132.4 = \$0.76).

Users of the tabulation which shows the purchasing power of the 1971 consumer dollar at different points in time (Table 5) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the CPI relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the CPI, it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

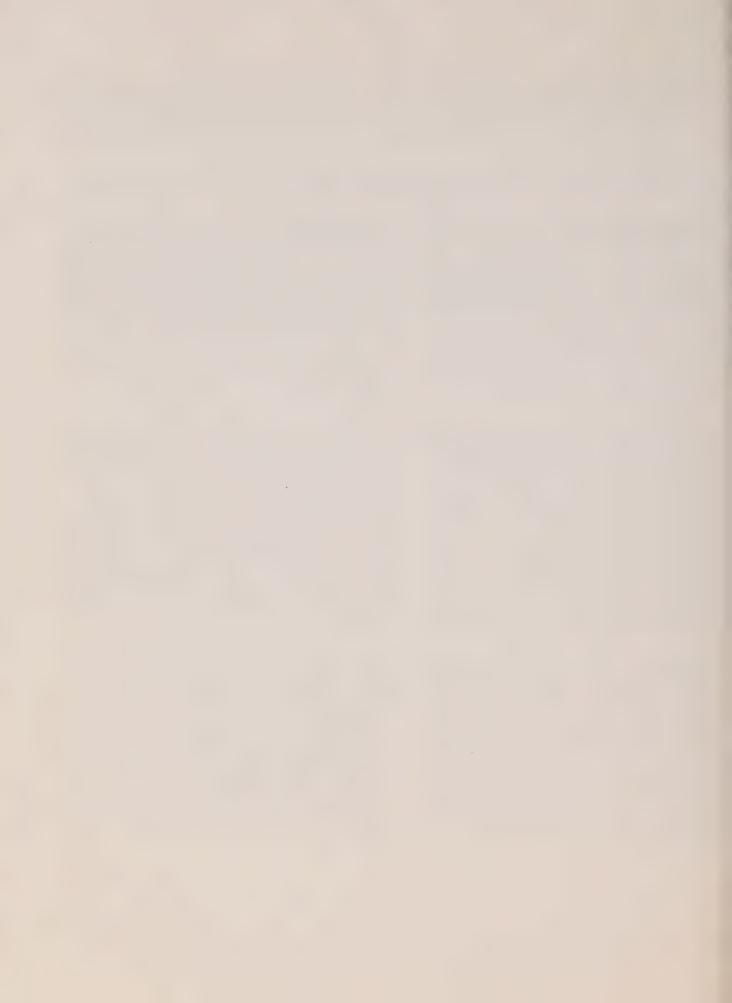

# Appendice 2

## LE POUVOIR D'ACHAT DU DOLLAR DE CON-SOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1975, par rapport au niveau de 1971, les prix à la consommation mesurés par l'IPC avaient progressé de 32.4 %, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1971 aurait coûté \$132.40 en janvier 1975 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1975 achète moins qu'en 1971 et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1975, le pouvoir d'achat du dollar de consommation de 1971 était tombé approximativement à 76 cents (\$1.00 x 100.00/132.4 = \$0.76).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1971 à différentes périodes (tableau 5) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'IPC pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence different sensiblement. Il faut également noter que, tout comme l'IPC il n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

# Appendix 3

# SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences, social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then returns to its original level. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement in one direction over a long period. It reflects continuing rather than changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the subject. Rather than reiterating those texts, an outline of the methodology employed by

# Appendice 3

# LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, puis revient à son niveau initial. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable orienté dans une même direction sur une longue période. Elle reflète la continuité de l'économie plutôt que l'évolution des facteurs économiques.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la question<sup>1</sup>. Au lieu d'en reprendre ici le contenu, nous présentons cidessous les grandes lignes de la méthode utilisée à Statistique

Statistics Canada – U.S. Bureau of Census X-11 Seasonal Adjustment Program (Variant II) is provided below, followed by a description of its application to the CPI.

### Section A

# 1. Outline Explanation of the X-11 Seasonal Adjustment Program

The X-11 Seasonal Adjustment Program is based on a ratio-to-moving-average methodology.

The first step in the ratio-to-moving-average method is to compute a centered 12-term moving average (a 2-term average of a 12-term moving average). This average eliminates a stable seasonal pattern and irregular fluctuations and reproduces exactly a linear trend. The raw data are then divided by this moving average; since both contain the trend-cycle component, division leaves, essentially, only the seasonal and irregular components. Estimates of the seasonal adjustment factors are then obtained by averaging the seasonal-irregular ratios for successive Januaries, Februaries, etc., so that the irregular factor is largely cancelled out by the averaging procedures. Once the seasonal variations are thus roughly identified, they are eliminated from the original observations by dividing these observations by the seasonal adjustment factors, resulting in a series that contains the trend, cycle and irregular factors, but not the seasonal factors.

The X-11 program performs several iterations of this ratio-to-moving-average procedure. Basically, three rounds of calculations are performed by the program. An outline of the first round follows:

The original series are smoothed using a centered 12term moving average to provide a preliminary estimate of the trend-cycle curve. Then, preliminary seasonalirregular ratios, seasonal factors and an irregular component are calculated. Based on the variability in the irregular component, weights are developed for each monthly value to estimate its degree of extremeness. Values outside specified upper limits receive a weight of 0.0 (totally extreme), values inside specified lower limits receive a weight of 1.0 (totally non-extreme) and values between the limits receive weights between 0.0 and 1.0 depending on their degree of extremeness. For values receiving less than full weight, the corresponding seasonal-irregular ratios are replaced with modified ratios and a second set of seasonal factors is computed. Using these factors, a first estimate of the seasonally adjusted series is Canada, c'est-à-dire, la variante X-11 de la méthode II du U.S. Bureau of Census que suivra une description de son application à l'IPC.

### Section A

# 1. Description sommaire du programme de désaisonnalisation X-11

Le programme X-11 fait appel à la méthode du rapport à la moyenne mobile.

La première étape de cette méthode consiste à calculer une moyenne mobile centrée de 12 termes (une moyenne de 2 termes d'une moyenne mobile de 12 termes). Cette moyenne élimine la tendance saisonnière stable ainsi que les fluctuations accidentelles et reproduit exactement une tendance générale linéaire. Les données brutes sont alors divisées par la moyenne mobile. Étant donné que les deux comportent l'élément tendance-cycle, ce calcul ne laisse essentiellement que les composantes saisonnières et accidentelles. Les estimations des facteurs de désaisonnalisation s'obtiennent ensuite en prenant la moyenne des rapports des composantes saisonnières et accidentelles pour les mois de janvier, les mois de février, etc., des années successives, de sorte que le facteur accidentel est en grande partie éliminé grâce à ces procédés de mise en moyennes. Une fois les variations saisonnières ainsi isolées en gros, elles sont éliminées des observations initiales grâce à la division de ces dernières par les facteurs de désaisonnalisation, ce qui donne une série renfermant la tendance générale, le cycle et les facteurs accidentels, mais non les facteurs saisonniers.

Le programme X-11 exécute plusieurs séries de calculs de ce rapport à la moyenne mobile. Fondamentalement, il y a trois étapes de calcul. On trouvera ci-dessous les grandes lignes de la première étape:

Les séries initiales sont lissées grâce à une moyenne mobile centrée de 12 termes, donnant ainsi une première estimation de la tendance-cycle. On calcule ensuite les ratios préliminaires des éléments saisonniers et accidentels, les facteurs saisonniers ainsi qu'une composante accidentelle. Compte tenu de la variabilité de la composante accidentelle, on établit des coefficients de pondération pour chaque valeur mensuelle afin d'estimer son degré de valeur extrême. Les valeurs se trouvant à l'extérieur de limites supérieures déterminées sont affectées du coefficient 0.0 (valeur extrême totale), les valeurs à l'intérieur de limites inférieures déterminées se voient affecter le coefficient 1.0 (valeur non extréme) et l'on attribue aux valeurs situées entre ces limites des coefficients de pondération compris entre 0.0 et 1.0 selon leur degré de valeur extrême. Quant aux valeurs dont la pondération est sous-représentative, leurs rapports composante saisonnière/ composante accidentelle sont remplacés par des ratios

obtained. Using a weighted Henderson moving average of this estimate of the seasonally adjusted series, a second estimate of the trend-cycle is computed. The steps above are repeated to produce a second estimate of the seasonally adjusted series and a refined estimate of the irregular component. This irregular component is then modified for extreme values and used to develop refined weights for identifying extreme values.

A second round is then performed with essentially the same computations as above, using an original series modified by the irregular weights estimated in the first round. This second round produces final estimates of the irregular weights.

Using an original series modified by the final irregular weights computed in the second round, a third and final round is performed. In this third round, final estimates are produced of the seasonal factors, seasonally adjusted series, trend-cycle and irregular components. Summary measures are computed.

#### 2. Guidelines

The guidelines employed are the standard ones developed and used in Statistics Canada. Their use assists in the judgement of the acceptability of adjusted results when applying the X-11 monthly multiplicative or additive programs. The quality assessment procedure employed exploits the X-11 summary measures (F2 tables) to yield two coefficients: the coefficient of irregularity ( $q_1$ ) and the coefficient of seasonality ( $q_2$ ). The coefficient of irregularity enables one to establish whether or not the series is sufficiently regular to permit adjustment, while the coefficient of seasonality gives the degree and significance of the seasonality present in the time series and thus indicates whether or not there is sufficient seasonality in the series to warrant its adjustment.

According to the guidelines, some of the options of the X-11 were not used, such as the trading day factors and the Easter adjustment, because they apply to "flow" time series. A "flow" can be defined as the rate of economic activity measured over a period of time. The CPI, however, measures prices at specific times during a month and therefore variations in the calendar are not a factor in the calculation of the Index.

Regarding the options for choosing sigma limits for graduating extreme values in estimating seasonal and trend-cycle components, the guidelines recommend that no specific option be applied. This suggestion was followed.

modifiés et l'on calcule un deuxième ensemble de facteurs saisonniers. À partir de ces facteurs, on obtient une première estimation de la série désaisonnalisée. En se servant d'une moyenne mobile pondérée du type Henderson de cette estimation, on calcule une seconde estimation de la tendance-cycle. On passe par les étapes mentionnées plus haut pour obtenir une seconde estimation de la série désaisonnalisée et une estimation plus élaborée de la composante accidentelle. Cette dernière est alors modifée en fonction de ses valeurs extrêmes et utilisée pour déterminer des coefficients de pondération améliorés qui identifieront les valeurs extrêmes.

La seconde phase reproduit essentiellement les mêmes calculs que ci-dessus, à partir d'une série originale modifiée par les coefficients de pondération de la composante accidentelle estimés lors de la première phase. La deuxième phase produit des estimations définitives des coefficients de pondération de la composante accidentelle.

À partir d'une série originale modifée par les coefficients de pondération définitifs de la composante accidentelle calculés lors de la deuxième phase, on procède à un troisième et dernier calcul qui consiste à produire des estimations définitives des facteurs saisonniers, des séries désaisonnalisées, de la tendance-cycle et de la composante accidentelle. On calcule ensuite des mesures récapitulatives.

#### 2. Directives

Les directives utilisées sont les directives normalisées élaborées et appliquées à Statistique Canada. Elles aident à juger de l'acceptabilité des résultats de la désaisonnalisation lorsqu'on utilise les schémas mensuels multiplicatifs ou additifs du programme X-11. La procédure d'évaluation de la qualité utilisée fait appel aux mesures récapitulatives du programme X-11 (tableaux F2) pour donner deux coefficients; le coefficient d'irrégularité  $(\mathbf{q}_1)$  et le coefficient de saisonnalité  $(\mathbf{q}_2)$ . Le premier permet de déterminer si la série est suffisamment régulière pour permettre une désaisonnalisation tandis que le coefficient de saisonnalité donne le degré et l'importance de la saisonnalité dans la série chronologique, indiquant ainsi si la saisonnalité de la série est suffisamment importante pour justifier une désaisonnalisation.

Suivant ces directives, certaines options du programme X-11 n'ont pas été utilisées, comme le facteur jours ouvrables et l'ajustement saisonnier pour Pâques, car elles s'appliquent à des séries chronologiques de "flux". On entend par "flux" le taux de l'activité économique mesuré sur une certaine période. L'IPC cependant mesure les prix à un instant donné du mois. Les variations durant l'année n'interviennent donc pas dans le calcul de l'indice.

Pour ce qui est des options liées au choix des bornes sigma dans le calcul des valeurs extrêmes lors de l'estimation de la saisonnalité et de la tendance-cycle, les directives recommandent de n'utiliser aucune option en particulier, suggestion qui a été suivie. The guidelines also suggest that wider sigma limits be considered only if more than 20% of the irregulars are treated as extremes. This suggestion was not followed due to the small number of irregulars treated as extremes.

For seasonal factor curves it is recommended that no specific option be employed. In the calculation of these curves, the Seasonal-irregular ratios for each month are smoothed by a  $3 \times 5$ -term moving average (a 3-term average of a 5-term average) to estimate final seasonal factors. Optionally, one may specify any of the following seasonal factor curves to compute final seasonal factors for any particular month: 3,  $3 \times 3$ ,  $3 \times 5$ ,  $3 \times 9$ , or n-term (where "n" is the number of years of data in a particular month; i.e., a stable seasonal). The choice of the moving average to smooth the Seasonal-irregular ratios depends on the amount of irregularity in the series.

Finally, the guidelines suggest that the appropriate moving average for the variable trend-cycle component be selected. In X-11, the moving average used to estimate the trend-cycle component is selected on the basis of the amplitude of irregular variations in the data relative to the amplitude of long-term systematic variations. A moving average is chosen that provides a suitable compromise between the need to smooth the irregular with a long-term inflexible moving average and the need to accurately reproduce the systematic element with a short-term flexible moving average. For highly irregular or very smooth series, a more appropriate average is chosen. The selection is made on the basis of a preliminary estimate of the I/C ratio (the ratio of the average absolute month-to-month change in the irregular to that in the trend-cycle). This procedure was adopted for the CPI adjustment.

## Section B

## 1. Seasonal Adjustment of the Revised CPI

As indicated in Appendices 1 and 2 the published official series for Canada, unadjusted for seasonal variations, is based on different expenditure weights over time. Subsequent to September 1978, the 1974 expenditure weights are in effect. These weights supersede the 1967 expenditure patterns used between April 1973 and September 1978. Prior to this, the 1957 expenditure patterns were used.

The use of different weighting systems over time necessitates the application of monthly links to a few of the CPI item indexes and to all of the aggregate

Les directives recommandent également que l'on ne considère des bornes sigma plus larges que si plus de 20 % des éléments accidentels sont traités comme des extrêmes. Cette recommandation n'a pas été suivie étant donné le petit nombre de tels éléments.

En ce qui concerne les courbes des facteurs saisonniers, il est recommandé de n'employer aucune option en particulier. Dans le calcul de ces courbes, les ratios composante saisonnière/composante accidentelle pour chaque mois sont lissés par la moyenne mobile de 3 x 5 termes (une moyenne de 3 termes d'une moyenne de 5 termes) pour donner les estimations définitives des facteurs saisonniers. On peut, au choix, préciser l'une des courbes de facteurs saisonniers suivantes pour calculer les facteurs saisonniers définitifs d'un mois en particulier: 3, 3 x 3, 3 x 5, 3 x 9 ou n-termes (lorsque "n" est le nombre d'années sur lesquelles portent des données pour un mois en particulier, c.-à-d., lorsqu'il s'agit d'une saisonnalité stable). Le choix de la moyenne mobile destinée au lissage des ratios composante saisonnière/composante accidentelle dépend de l'importance de la composante accidentelle dans la série

Les directives en question recommendent enfin de choisir la moyenne mobile appropriée pour le calcul de la composante variable tendance-cycle. Dans le programme X-11, la moyenne mobile utilisée pour estimer la composante tendancecycle est choisie en fonction de l'amplitude des variations accidentelles dans le cas des données relatives à l'amplitude des variations systématiques à long terme. On choisit une moyenne mobile qui constitue un compromis acceptable entre la nécessité de lisser la composante accidentelle grâce à une moyenne mobile rigide à long terme et la nécessité de reproduire avec précision la composante systématique grâce à une moyenne mobile souple à court terme. Pour les séries très accidentées ou très stables, on choisit une moyenne plus appropriée. On fait ce choix en fonction d'une première estimation du ratio A/C (ratio de la variation absolue moyenne mensuelle de la composante accidentelle à celle de la tendance-cycle). Cette procédure a été adoptée pour l'ajustement de l'IPC.

## Section B

# 1. Désaisonnalisation de l'IPC révisé

Tel qu'indiqué aux appendices 1 et 2, les séries publiées officielles du Canada, non désaisonnalisées, sont basées sur des pondérations tirées de dépenses différentes au cours du temps. Les pondérations fondées sur les dépenses de 1974 sont effectives pour la période postérieure à septembre 1978. Ces pondérations remplacent les schémas de dépenses de 1967 qui étaient utilisés entre avril 1973 et septembre 1978. Avant cette période on avait utilisé les schémas de dépenses de 1957.

L'utilisation de différents systèmes de pondération, au cours du temps, implique un raccordement mensuel pour quelques indices de l'IPC au niveau des articles et pour tous

indexes that exist historically as a means of adjusting for the amount of difference in level resulting from the incorporation of different weights. This linking ensures that conceptually equivalent series are made continuous over time.

In the process of seasonally adjusting the CPI, the item series which require adjustment are fed into the X-11 program: the series obtained are then recombined with the rest of the item series, which are unadjusted and unlinked, to obtain seasonally adjusted aggregates. Then the appropriate linking factors are applied, where required, to alter the level of the seasonally adjusted series by the amount of alteration required for the unadjusted series. The decision to produce seasonally adjusted aggregates by summing the appropriate item series (both those that have been seasonally adjusted and those that have not) rather than directly seasonally adjusting the aggregates was taken because the detection of significant seasonality is facilitated by deseasonalizing series at the item level. This is so because item seasonality within an aggregate may be offsetting, obscuring the existence of important seasonality at the item level.

## 2. Historical Seasonally Adjusted CPI Data

The use of different weighting systems presents problems for seasonal adjustment, as the incorporation of different weights can alter seasonal patterns at the aggregate levels. One solution to this problem, the one used for the CPI, is to concentrate the seasonal adjustment process to a time period in which the weighting system remains fixed. In the current Revision, item series were rebased to 1974=100 for purposes of seasonal adjustement and aggregation (see reference paper The Consumer Price Index, Revision Based on 1974 Expenditures - Concepts and Procedures, Catalogue 62-546). However, the official published series for Canada, unadjusted for seasonal variations, incorporates the 1967 expenditure weights for the period May 1973 to September 1978. Thus, although appropriate seasonal adjustment factors were developed through use of unofficial data starting in January 1974, official deseasonalized CPI movements are available only for the period subsequent to September 1978.

## 3. Projected Factors

In general terms, the procedure is to apply the X-11 program to those of the item series which, in accordance with the guidelines, are deemed to be sufficiently seasonal to warrant their deseasonalization. The X-11 program yields, *inter alia*, monthly seasonal factors for a year ahead. The formula to obtain these projected factors is as follows:

 $S_{n+1} = S_n + 1/2$  ( $S_n - S_{n-1}$ ), where "S" is the seasonal factor and "n" is the current period of time.

les indices historiques agrégés de manière à tenir compte, par ajustment, des différences de niveau imputables à l'introduction de pondérations différentes. Ce raccordement nous permet d'assurer la continuité, au cours du temps, de séries conceptuellement équivalentes.

Lors de la désaisonnalisation des IPC, les séries à désaisonnaliser sont introduites dans le programme X-11; les séries ainsi obtenues sont alors recombinées aux autres séries, qui ne sont ni désaisonnalisées, ni raccordées, pour donner des agrégats désaisonnalisés. Les facteurs de raccordement appropriés sont ensuite éventuellement appliqués pour modifier le niveau des séries désaisonnalisées d'une quantité égale au niveau de variation nécessaire pour les séries non désaisonnalisées. On a décidé de produire des séries agrégées désaisonnalisées en prenant la somme des séries appropriées (celles qui ont été désaisonnalisées et celles qui ne l'ont pas été) plutôt que de désaisonnaliser directement les séries agrégées parce que l'on peut plus facilement dégager la saisonnalité significative par la désaisonnalisation des séries au niveau de l'article. La raison en est que la saisonnalité pour un article à l'intérieur d'une série agrégée peut être compensatoire et obscurcir une éventuelle forte saisonnalité au niveau de l'article.

# 2. Données chronologiques désaisonnalisées de l'IPC

L'utilisation de différents systèmes de pondération présente des problèmes pour la désaisonnalisation, puisque l'introduction de pondérations différentes peut modifier les caractéristiques saisonnières aux niveaux agrégés. Une solution à ce problème, celle utilisée pour l'IPC, consiste à concentrer le processus de désaisonnalisation dans une période de temps où le système de pondération demeure fixe. Pour la révision actuelle, les séries des articles ont été mises sur la base de 1974=100 pour la désaisonnalisation et l'agrégation (voir le document de référence L'indice des prix à la consommation - Révision fondée sur les dépenses de 1974 - Concepts et Procédés, nº 62-546 au catalogue). Toutefois, les séries officielles publiées du Canada, non désaisonnalisées, sont formées à partir des pondérations basées sur les dépenses de 1967 pour la période allant de mai 1973 à septembre 1978. C'est pourquoi, bien que l'on ait élaboré des facteurs de désaisonnalisation par l'emploi de données non officielles remontant à janvier 1974, les mouvements de l'IPC officiel désaisonnalisé ne portent que sur la période postérieure à septembre 1978.

### 3. Projection de facteurs

Dans l'ensemble, il s'agit d'appliquer le programme X-11 aux séries d'articles qui, conformément aux directives, semblent avoir suffisamment de saisonnalité pour justifier la désaisonnalisation. Le programme X-11 produit entre autres, des facteurs saisonniers mensuels pour une année à l'avance. Pour la projection de ces facteurs, on utilise la formule suivante:

 $S_{n+1} = S_n + 1/2$   $(S_n - S_{n-1})$ , "S" étant le facteur saisonnier et "n" la période courante.

The projected factors are used in the 12 subsequent months to seasonally adjust the appropriate item indexes. Determination of projected seasonal factors for each 12-month period is carried out at the commencement of each calendar year.

It is useful to calculate 12-month forecasts of seasonal patterns of aggregated series. Seasonally adjusted aggregate indexes, however, are built up from their individually adjusted component items, and thus are not the product of direct deseasonalization. Accordingly, in contrast to the practice of projecting seasonal adjustment factors 12 months ahead in the case of individual item series, it is not possible to determine in advance exactly what implicit seasonal factors will be applicable to aggregate series. In actual fact, in any given month seasonal adjustment factors for aggregate indexes constitute a by-product of, rather than an input to, the seasonal adjustment procedures that have been adopted. They are obtained implicitly with the formula:

Original Index
Seasonally Adjusted Index = Seasonal Factor

In order to produce forecasts of seasonal factors for aggregate series, using historical factors obtained implicitly, we apply the above formula, i.e.:

$$S_{n+1} = S_n + 1/2 (S_n - S_{n-1})$$

to obtain projected implicit seasonal factors for the aggregate series. The results of this procedure, however, will not necessarily be identical, month-bymonth, with the actual implicit factors derived from the aggregation process. The forecasts of monthly implicit seasonal factors serve only to provide a general indication of seasonal patterns.

### 4. Revision Policies

The revision of seasonally adjusted data will take place once a year and on a fixed date. To determine the extent of the revision, it has been established that:

- (i) the percentage of the difference between the new and the old seasonally adjusted values will be computed;
- (ii) the years in which more than five of the percentages obtained in section (i) are greater than one-half per cent (0.5%) will be determined; and
- (iii) the new seasonally adjusted values will be substituted for those previously published, commencing with January of the earliest full year determined in (ii).

This procedure will be followed for several reasons. First, the seasonally adjusted data for the current

On utilise les facteurs ainsi obtenus pour les 12 mois qui suivent pour désaisonnaliser les indices appropriés. La projection des facteurs saisonniers pour chaque période de 12 mois se fait au début de chaque année civile.

Il est utile de calculer des prévisions sur 12 mois des caractéristiques saisonnières des séries agrégées. Les indices agrégés désaisonnalisés, cependant, sont construits à partir de leurs composantes désaisonnalisées individuellement et ils ne sont donc pas le résultat d'une désaisonnalisation directe. En conséquence, contrairement à la méthode qui consiste à faire la projection des facteurs de désaisonnalisation 12 mois à l'avance dans le cas des séries d'articles, il n'est pas possible de déterminer à l'avance et de manière précise quels facteurs saisonniers implicites vont s'appliquer aux séries agrégées. En réalité, pour quelque mois que ce soit, facteurs de désaisonnalisation des indices agrégés constituent un sous-produit des méthodes de désaisonnalisation adoptées plutôt qu'un apport à ces dernières. Ils sont donnés par la formule suivante:

Indice initial
Indice désaisonnalisé

Facteur saisonnier

Pour obtenir des prévisions des facteurs saisonniers pour les séries agrégées, à partir des facteurs chronologiques obtenus implicitement, nous utilisons la formule ci-dessus, c.-à-d.:

$$S_{n+1} = S_n + 1/2 (S_n - S_{n-1})$$

pour calculer les projections des facteurs saisonniers implicites des séries agrégées. Toutefois, les résultats ne seront pas nécessairement toujours identiques d'un mois à l'autre aux facteurs implicites réels obtenus lors de l'agrégation. Les prévisions des facteurs saisonniers implicites mensuels ne donnent qu'une indication générale des caractéristiques saisonnières.

### 4. Principes de révision

La révision des données désaisonnalisées aura lieu une fois par an et à une date fixe. Pour déterminer l'ampleur de cette révision, on a décidé de:

- (i) calculer le pourcentage de la différence entre les anciennes et les nouvelles valeurs désaisonnalisées;
- (ii) déterminer les années où plus de cinq des pourcentages obtenus à la rubrique (i) dépassent un demi pourcent (0.5 %); et de
- (iii) substituer les nouvelles séries désaisonnalisées à celles publiées auparavant, en commençant par le mois de janvier de la plus récente année complète déterminée en (ii).

Cette procédure sera suivie pour plusieurs raisons. En premier lieu, les données désaisonnalisées de l'année en cours

year have been produced using projected seasonal factors derived from previous years' unadjusted data. When the unadjusted data are available at the end of the current year, introduction of these data into the seasonal adjustment calculation will improve the quality of the adjustment for the current period. Secondly, if a new seasonal pattern, or a shift in the pattern or the amplitude is identified, these changes might well affect the seasonally adjusted results for a number of years in the historical record. Thirdly, in order to produce projected seasonal factors to be used in the following 12 months, it is necessary to incorporate the latest raw (unadjusted) data.

In addition, the revision procedure provides the opportunity to examine each item series in the light of the new information obtained in the current year, to determine if each of the item series already adjusted are still seasonal and if any of the unadjusted series have become seasonal. A change in status could occur for series which are either just outside or just inside the limits set up by the Statistics Canada guidelines. The number of such series, however, should be relatively small.

With regard to the above considerations, it has been decided to consider revision of the seasonally adjusted CPI data at the completion of each calendar year. If required, revised seasonally adjusted historical data will be released with the January CPI for the next year.

#### Section C

### Seasonally Adjusted Groups and Items

The seasonality identified in the CPI is mainly concentrated in about one third of the items that comprise it, the other two-thirds exhibit very little seasonality.

Those items exhibiting sufficient seasonality to warrant their adjustment are included in the groups listed below:

Food

Food for home consumption

Meat, poultry and fish

Beef

Pork Poultry

Fruit and vegetables

Fresh fruit Fresh vegetables ont été calculées grâce aux projections de facteurs saisonniers obtenus à partir de données non désaisonnalisées d'années précédentes. Lorsque l'on dispose de données non désaisonnalisées à la fin de l'année en cours, l'introduction de ces données dans le calcul de désaisonnalisation améliore la qualité de la désaisonnalisation pour la période en cours. Deuxièmement, si l'on détecte une nouvelle caractéristique saisonnière ou une modification de l'amplitude d'une caractéristique, ces changements pourraient bien affecter les résultats de la désaisonnalisation pour un certain nombre d'années dans la série chronologique. Enfin, pour effectuer la projection de facteurs saisonniers destinés à être utilisés pour les 12 mois suivants, il est nécessaire d'incorporer les dernières données brutes (non désaisonnalisées).

De plus, la révision fournit l'occasion d'étudier chaque série d'articles à la lumière des nouveaux renseignements obtenus au cours de l'année courante, pour déterminer si chacune des séries déjà désaisonnalisée contient encore de la saisonnalité, ou si l'une des séries non désaisonnalisées contient maintenant de la saisonnalité. La nature des séries qui sont situées soit juste à l'extérieur, soit juste à l'intérieur des limites définies par les directives de Statistique Canada pourrait s'en trouver modifiée. Ces séries devraient cependant demeurer relativement peu nombreuses.

Compte tenu des considérations énoncées ci-dessus, il a été décidé d'envisager la révision des données désaisonnalisées de l'IPC à la fin de l'année civile. Au besoin, on publiera les données chronologiques désaisonnalisées révisées avec l'IPC de janvier pour l'année suivante.

### Section C

### Groupes et articles désaisonnalisés

La saisonnalité isolée dans l'IPC se concentre principalement sur le tiers environ des éléments constitutifs, les deux autres tiers présentant très peu de saisonnalité.

Le groupe ci-dessous est la liste des éléments qui présentent suffisamment de saisonnalité pour justifier leur désaisonnalisation:

Aliments

Aliments consommés à la maison

Viandes, volaille et poisson

Boeuf Porc

Volaille

Fruits et légumes

Fruits frais

Légumes frais

Housing

Shelter

Household operation

Clothing

Women's wear Girls' wear Men's wear Boys' wear

Transportation

Health and personal care

Recreation, reading and education

Tobacco and alcohol

CPI Reclassified by Goods and Services

Goods

Durable goods
Semi-durable goods
Non-durable goods

Non-durable goods excluding food

Services

All-items excluding food

Habitation

Logement

Dépenses de ménage

Habillement

Vêtements pour femmes Vêtements pour filles Vêtements pour hommes Vêtements pour garçons

Transports

Santé et soins personnels

Loisirs, lecture et formation

Tabacs et boissons alcoolisées

Classification complémentaire de l'IPC par biens et services

Biens

Biens durables Biens semi-durables Biens non durables

Biens non durables (sauf aliments)

Services

Ensemble sans les aliments

# TABLE I. Revised Seasonal Adjustment Factors for Major Components and Selected Sub-groups and Items, 1978(1)

TABLEAU I. Facteurs saisonniers révisés pour les composantes principales et certains sous-groupes et articles 1978(1)

|   | pes et articles 1978(1) |        |        |  |  |  |

# Appendix 4

# CITY AVERAGE RETAIL PRICES

### 1. Introduction

The Prices Division of Statistics Canada collects, each month, many thousands of retail prices in most of the large centres across the country. However, though these prices may be entirely suitable for compiling the Consumer Price Index, they do not necessarily yield representative and comparable average prices. There are a number of reasons for this. Variations in food habits and in the brands selected among cities cause city-to-city differences that do not represent real price differentials for the same quality. The brands selected for the production of the CPI are the volume sellers, both manufacturers' and private label brands and the Index produced for any one city, as well as for Canada, will be based upon the price movements of a heterogeneous mixture that might well be quite different from the heterogeneous mixture of another city. To produce an accurate measure of price change within a city, it is essential to ensure that the quantities, brands and sizes selected are sufficiently important to represent price movement. However, to produce an accurate measure of average prices at one point in time which will permit comparison between cities, it is essential that the qualities, brands and sizes selected are sufficiently similar so as not to artificially generate price differentials.

Further, although market forces will generally impose a certain degree of uniformity on price movements within a city, price ranges at any point of time can nevertheless still be quite wide. Thus, a sample of retail outlets which is sufficiently large to accurately monitor price movement, might well be too small to adequately encompass price spreads at one point of time.

Thus, in order to satisfactorily produce representative and comparable average prices, it was deemed necessary to undertake a special pricing survey which had the features outlined below.

# 2. Average Prices Survey

The Average Retail Prices Surveys are normally undertaken during the second or third week of October

# Appendice 4

# PRIX DE DÉTAIL MOYENS PAR VILLE

### 1. Introduction

La Division des prix de Statistique Canada recueille chaque mois des milliers de prix de détail dans la plupart des grands centres urbains du pays. Mais, bien que ces prix puissent entièrement servir à la confection de l'indice des prix à la consommation, ils ne donnent pas nécessairement des prix moyens représentatifs et comparables. Il y a un certain nombre de raisons à cela. Les différences entre les habitudes de dépenses alimentaires et les marques choisies dans les différentes villes entraînent des différences entre villes qui ne représentent pas les différences réelles entre les prix pour un produit de même qualité. Les marques retenues pour la confection de l'IPC sont les articles qui se vendent en grandes quantités, qu'il s'agisse de marques de commerces de fabricants ou d'entreprises individuelles et l'indice d'une ville quelconque, ainsi que celui de l'ensemble du Canada sera basé sur le mouvement des prix d'un ensemble hétérogène qui peut fort bien différer assez sensiblement de l'ensemble d'une autre ville. Pour obtenir une mesure adéquate des mouvements de prix dans une ville, il est essentiel de s'assurer que les quantités, les marques et les tailles choisies soient suffisamment importantes pour représenter le mouvement des prix. Cependant, afin d'obtenir une mesure adéquate des prix movens à un instant donné qui permette une comparaison entre villes, il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire artificiellement des différences de prix.

Par ailleurs, bien que les forces agissant sur le marché vont en général imposer un certain degré d'uniformité aux mouvements de prix dans une ville, l'intervalle des prix à un instant donné peut être néanmoins assez étendu. Ainsi, un échantillon de magasins de détail suffisamment important pour suivre précisément le mouvement des prix peut très bien se révéler trop petit pour représenter adéquatement l'éventail des prix à un temps donné.

Donc, afin d'obtenir des prix moyens représentatifs et comparables qui soient satisfaisants, on a jugé nécessaire d'entreprendre une enquête spéciale d'observation des prix, dont les caractéristiques sont décrites ci-dessous.

# 2. Enquête sur les prix moyens

Une enquête sur les prix moyens de détail est normalement effectuée durant la deuxième ou troisième semaine and April. Prices of approximately 60 items, consisting mainly of food and some personal care and household supply products, are collected in a large number of outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Sault Ste. Marie, Thunder Bay, Winnipeg, Saskatoon, Regina, Calgary, Edmonton, Vancouver and Victoria.

The sample of stores is designed so that the outlets selected have, between them, approximately half or more of the grocery store sales for each city. Grocery stores are defined, for purposes of this Survey, as those with meat sales valued at between 15% and 50% of total sales. Sales data are derived from Census of Merchandising information, updated, where necessary, by local advice from Statistics Canada Regional Offices.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

# 3. Calculation Methodology

## (a) City Prices

Prices are collected in both chain and independent stores. (A chain store organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

### (b) Weighted City Averages

A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

d'octobre et d'avril. Les prix de quelque 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Sault Ste. Marie, Thunder Bay, Winnipeg, Saskatoon, Régina, Calgary, Edmonton, Vancouver et Victoria.

L'échantillon des magasins est défini de telle façon que les points de vente choisis, pris ensemble, comptent pour environ la moitié ou plus des ventes des épiceries dans chaque ville. Aux fins de cette enquête, les épiceries étaient définies comme celles dont les ventes de viande représentaient entre 15 % et 50 % du total des ventes. Les données des ventes sont dérivées à partir des données du recensement des marchandises, mises à jour, lorsque nécessaire, sur recommandation des bureaux régionaux de Statistique Canada.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

### 3. Méthode de calcul

## a) Prix urbains

Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas ces articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

## b) Moyennes pondérées des villes

Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

## 4. Monthly Updating of Price Averages

The considerable resources required to collect and analyse the data to produce representative and comparable average prices cannot be expended each month. It therefore becomes necessary to update the survey prices on a regular monthly basis until another average prices survey can be undertaken. Because such updated prices are not themselves the direct product of an expanded average prices survey, but instead are calculated by the application of some measure to the actual averages, they are designated as "Calculated Average Prices".

Under normal circumstances a readily available method of producing Calculated Average Prices for the month subsequent to the survey months would be to apply the movement of the relevant city and item CPI to the corresponding average prices for the survey months. However, because price collection for the survey months falls between the pricing dates for the October and November or April and May CPI, the price movement for these periods for certain items has to be adjusted to take into account this time lag. For the months subsequent to November or May, the full month-to-month movement is applied to the latest available calculated average prices to produce the following month's calculated average prices. Occasionally, in periods of volatile price movements, the methodology employed in adjusting prices falling between the CPI pricing dates becomes extremely subjective, vielding results which are open to misinterpretation. Calculated Average Prices for items falling in this category may, therefore, not be published. It is important to note that the Calculated Average Prices are estimates of retail price levels in each city. Since they are not derived from actual surveys of prices in the marketplace, but rather from an updating of previously gathered price information, they may not always precisely reflect actual market conditions at a specific point in time.

Updated calculated average prices are, at present, published only for the 14 index cities. This is attributable to the limited experience which has been acquired in using this updating methodology for the 12 non-index cities.

# 5. Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey is provided in the immediately following pages.

# 4. Mise à jour mensuelle des movennes de prix

On ne peut consacrer chaque mois les ressources considérables nécessaires à la collecte et à l'analyse des données pour produire des prix moyens représentatifs et comparables. Il devient donc nécessaire de mettre à jour les prix de l'enquête sur une base mensuelle régulière jusqu'à ce qu'il soit possible d'entreprendre une autre enquête sur les prix moyens. Étant donné que ces prix mis à jour ne sont pas eux-mêmes le produit direct d'une enquête exhaustive sur les prix moyens, mais qu'ils sont au contraire calculés par l'application d'une certaine mesure aux moyennes réelles, on les qualifie de "prix moyens calculés".

Dans des conditions normales, une méthode rapidement applicable pour obtenir des prix moyens calculés pour le mois de novembre consiste à appliquer le mouvement des IPC des articles en question aux prix movens d'octobre de la ville observée. Cependant, la date du relevé des prix de l'enquête se situant entre les dates des relevés de prix des IPC d'octobre et novembre ou d'avril et mai. Il faut ajuster la variation de prix de ces périodes pour certains articles afin de tenir compte de cet écart de temps. Pour le mois suivant, novembre ou mai, la variation totale d'un mois à l'autre peut s'appliquer au dernier prix moyen calculé disponible pour obtenir le prix moven calculé du mois suivant. Occasionnellement, dans des périodes où les prix sont très volatiles, la méthodologie utilisée pour rajuster les prix entre les relevés de l'IPC devient extrêmement subjective, produisant ainsi des résultats que l'on pourrait mal interpréter. Il se pourrait, donc, que les prix moyens calculés pour les articles se rapportant à cette catégorie ne soient pas publiés. Il est important de noter que les prix moyens calculés sont une estimation du niveau des prix moyens dans chaque ville. Comme ils ne proviennent pas d'enquêtes réelles sur les prix pratiqués mais représentent plutôt une mise à jour de renseignements sur les prix recueillis auparavant, ils ne rendent pas toujours compte avec précision de la conjoncture commerciale à un instant donné.

Les prix moyens calculés ne sont présentement publiés que pour les 14 villes dont on produit un indice séparé à cause de notre expérience limitée face à l'utilisation de la méthode de mise à jour pour les 12 villes dont on ne produit pas un indice séparé.

# 5. Spécifications des articles

Les pages qui suivent, présentent une description des quelques 60 articles contenus dans l'enquête des prix moyens.

# CITY AVERAGE RETAIL PRICES – ITEM SPECIFICATIONS

# **Detailed Specification**

#### **Dairy Products**

Milk. Fresh fluid whole dairy milk, pasteurized, may be homogenized or contain vitamin D. Disposable carton of 1 litre.

Evaporated milk. Generally available manufacturers' brands (store brands excluded), unsweetened, may be vitaminized, 385 ml. can.

Powdered milk. Generally available manufacturers' brands (store brands excluded), powdered skim milk, 3-pound card-board package, may be pasteurized or vitaminized.

Ice cream. Store brand, vanilla, between 10% and 12% milk fat content in regular (non-fancy) container of 2 litres.

**Butter**. Lowest price available in store for first grade, creamery butter, salted, parchment or foil wrapped, 1 pound.

Cheese. Generally available manufacturers' brands (store brands excluded), process cheese square slices, plain, without seasoning, relishes or condiments, individually wrapped, 1/2 pound.

#### Poultry and Eggs

Chicken. Eviscerated, fresh or frozen, broiler or fryer, whole, 2 to 4 pounds, Grade A, price per pound.

Eggs. Large eggs, Grade A, in a carton of 1 dozen. Medium eggs, Grade A, in a carton of 1 dozen.

#### Beef

Sirloin steak. Cut from section of hind quarter next to short loin, bone-in or partially boned, fresh, Canada A or B brand, pound.

Round steak. Full cut of section of hind quarter next to rump, fresh, Canada A or B brand, boneless, pound.

Prime rib roast. Standing, bone-in, short cut, 7 inches, any ribs within the first five of standard seven, fresh, Canada A or B brand, pound.

# PRIX DE DÉTAIL MOYENS PAR VILLE — SPÉCI-FICATIONS DES ARTICLES

# Spécification détaillée

#### **Produits laitiers**

Lait. Lait de laiterie frais, liquide, entier, pasteurisé, peut être homogénéisé ou additionné de vitamine D. Contenant de 1 litre (en carton), non consigné.

Lait évaporé. Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré, peut être additionné de vitamines, boîte de 385 ml.

Lait en poudre. Marques des fabriquants largement distribuées (sauf les marques des magasins), lait écrémé en poudre, contenant en carton de 3 livres, peut être pasteurisé ou vitaminé.

Crème glacée. Marque du magasin, à la vanille, contenant de 10 % à 12 % de matière grasse de lait dans des contenants réguliers (non de fantaisie), 2 litres.

Beurre. Beurre de première qualité, le moins cher disponible dans le magasin, beurre de laiterie, salé, enveloppé dans du parchemin ou dans un emballage d'aluminium, 1 livre.

Fromage. Marques des fabricants largement distribuées (sauf les marques des magasins), fromage fondu, en tranches carrées, enveloppées individuellement, nature, sans assaisonnement, ni relish, ni condiments, 1/2 livre.

#### Volaille et oeufs

Poulet. Vidé, frais ou congelé, à griller ou à frire, entier, de 2 à 4 livres, catégorie A, vendu à la livre.

Oeufs. Oeufs de grosse taille, catégorie A, en boîte de 12. Oeufs de taille moyenne, catégorie A, en boîte de 12.

#### Boeuf

Bifteck de surlonge. Morceaux coupés dans la partie du quartier de derrière voisine du bout de longe, non désossé ou partiellement désossé, frais, marque Canada A ou B, livre.

Bifteck dans la ronde. Coupe entière d'une section du quartier de derrière voisine de la croupe, frais, marque Canada A ou B, désossé, livre.

Rôti de côtes de choix. Nature, non désossé, coupe courte, 7 pouces, toutes les côtes parmi les cinq premières sur les sept côtes normales, frais, marque Canada A ou B, livre.

#### Reef - Concluded

Blade roast (blade in). Cut from fore quarter next to rib section, fresh, Canada A or B brand, pound.

Blade roast (blade out). Cut from fore quarter next to rib section, fresh, Canada A or B brand, pound.

Stewing beef, Boneless stewing beef, fresh, Canada A or B brand, pound.

**Ground beef, regular.** Ground beef, with 24% to 30% fat content, fresh, pound.

#### Pork

Pork, centre cut chops. Cut from centre of loin, fresh, bone-in, trimmed, excluding "fast fry", "brown and serve", "rib chops", mixed cut and frozen chops, pound.

**Pork**, **butt roast**. Cut from top half of shoulder, fresh, skin removed, about 1/2 inch fat left on, **Boston Butt**, pound.

Pork, butt roast. Cut from top half of shoulder, fresh, skin removed, about 1/2 inch fat left on, Boneless Butt, pound.

Sausages. Generally available manufacturers' brands (store brands excluded), pure pork sausages, fresh or frozen, pound.

**Bacon**. Generally available manufacturers' brands (store brands excluded), smoked, side bacon, sliced, rind off, vacuum packaged, packers first line.

#### Other Meat

Wieners. Generally available manufacturers' brands (store brands excluded). Made from beef and pork, ground, skinless, smoked and cooked, vacuum packaged, first grade, pound.

#### Fish

Salmon. Generally available manufacturers' brands (store brands excluded). British Columbia, sockeye salmon, first grade, stamped "Canada", 7 3/4 ounce tin

#### Roeuf - fin

Rôti de palette (non désossé). Rôti coupé dans la partie du quartier de devant voisine de la section des côtes, frais, marque Canada A ou B, livre.

Rôti de palette (désossé). Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, livre.

**Boeuf à ragoût.** Désossé, boeuf à ragoût, frais, marque Canada A ou B. livre.

Boeuf haché régulier. Boeuf haché, matières grasses: 24 % à 30 %, frais, livre.

#### Porc

Porc, côtelettes, partie du centre. Coupe provenant du centre de la longe, frais, non désossé, paré, sauf les côtelettes "à cuisson rapide", "faire dorer et servir", "côtelettes de côtes", coupes diverses et la viande congelée, livre.

Porc, rôti de porc. Rôti coupé dans la moitié supérieure de l'épaule, frais, couenne enlevée, reste environ 1/2 pouce de gras, "Boston Butt", livre.

Porc, rôti de porc. Rôti coupé dans la moitié supérieure de l'épaule, frais, couenne enlevée, reste environ 1/2 pouce de gras, rôti désossé, livre.

Saucisses de porc. Marques des fabriquants largement distribuées (sauf les marques des magasins), saucisses de pur porc, livre.

Bacon. Marques des fabriquants largement distribuées (sauf les marques des magasins), fumé, bacon de flanc, en tranche, couenne enlevée, emballé sous vide, fabricants de première qualité.

#### Autre viande

Saucisses de Francfort. Marques des fabricants largement distribuées (sauf les marques des magasins). Faites de boeuf et de porc haché, sans peau, fumées et prêtes à servir, emballées sous vide, première qualité, livre.

#### Poisson

**Saumon.** Marques des fabricants largement distribuées (sauf les marques des magasins). Saumon de Colombie-Britannique, sockeye, de première qualité, étiqueté "Canada", boîte de 7 3/4 onces.

#### **Fats**

Shortening. Generally available manufacturers' brands (store brands excluded), processed from blends of edible vegetable oils and animal fats or 100% vegetable oils. May be partly hydrogenated, carton of 1 pound.

#### **Bakery and Cereal Products**

Flour, 2.5 kg. Generally available manufacturers' brands (store brands excluded) of white all purpose or bread flour, vitaminized may be pre-sifted. Excluding instantized, pastry and other special types, weight change as of October 1978.

Flour, 3.5 kg. Generally available manufacturers' brands (store brands excluded) of white all purpose, vitaminized flour. Excluding instantized, pastry and other special types, weight change as of October 1978.

Corn flakes. Generally available manufacturers' brands (store brands excluded), corn flakes, 675 g package, weight change as of October 1978.

**Spaghetti.** Generally available manufacturers' brands (store brands excluded) of ready cut long spaghetti, 500 g package, weight change as of April 1979.

Bread. Store brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched.

**Bread.** Manufacturers' brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched.

Soda crackers. Generally available manufacturers' brand (store brands excluded), salted, unsalted or saltines, 16 ounces.

# Sugar and Sweets

Sugar. White, granulated, cane or beet sugar, bag of 2 kilograms.

Jam. Generally available manufacturers' brands (store brands excluded), pure strawberry jam, 9-ounce glass jar.

#### Fruit

Oranges. California, medium size (138 or 113) price per pound.

# Matières grasses

Graisse végétale. Marques des fabricants largement distribuées (sauf les marques des magasins), fabriquée à partir de mélanges d'huiles végétales comestibles et de graisses animales ou d'huile végétale à 100 %. Peut être partiellement hydrogénée, carton de 1 livre.

# Céréales et produits de boulangerie

Farine, 2.5 kg. Marques des fabricants largement distribuées (sauf les marques des magasins) blanche tout usage ou farine à pain, additionnée de vitamines peut être prétamisée. Exclure la farine instantanée, la farine à pâtisserie et les autres types spéciaux de farine, changement de poids en octobre 1978.

Farine, 3.5 kg. Marques des fabriquants largement distribuées (sauf les marques des magasins), farine tout usage, additionnée de vitamines. Exclure la farine instantanée, la farine à pâtisserie et les autres types spéciaux de farine, changement de poids en octobre 1978.

Flocons de mais. Marques des fabricants largement distribuées (sauf les marques des magasins), mais en flocons, paquet de 675 g, changement de poids en octobre 1978.

**Spaghetti.** Marques des fabricants largement distribuées (sauf les marques des magasins), spaghetti, coupe longue, paquet de 500 g, changement de poids en avril 1979.

Pain. Marques des magasins, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines.

Pain. Marques des fabricants, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines.

Biscuits soda. Marques des fabricants largement distribuées (sauf les marques des magasins), salés, non salés ou "saltines", paquet de 16 onces.

#### Sucre et produits sucrés

Sucre. Blanc, cristallisé, de canne ou de betterave, sac de 2 kilogrammes.

Confiture. Marques des fabricants largement distribuées (sauf les marques des magasins), pure, de fraises, pot de verre de 9 onces.

#### **Fruits**

Oranges. De Californie, grosseur moyenne (138 ou 113) prix à la livre.

#### Fruit - Concluded

**Grapefruit.** United States, white, may be seedless, size 48's, if not available 40's or 56's, good quality, price per pound.

Bananas. First grade, price per pound.

Apple juice. Generally available manufacturers' brands (store brands excluded), unsweetened, natural, may be vitaminized, choice grade, single strength, 48 ounces.

#### Vegetables

**Potatoes.** Table potatoes, white, Canada No. 1, 10-pound bag.

Onions. Cooking onions, common white, yellow or red, dry, good quality, in plastic or cellophane packages (up to a 3-pound package), price per pound.

Carrots. Tops completely removed, good quality, in plastic or cellophane packages (up to a 3-pound package), price per pound.

Cabbage. Fresh, domestic or imported, green cabbage, good quality, price per pound of an average size head.

Celery. Celery stalks, green, fresh, may be trimmed or clipped, price per pound.

Lettuce. Fresh head, green, good quality, average size head, price per pound.

Tomatoes, canned. Generally available manufacturers' brands (store brands excluded), of canned field tomatoes, choice grade, 28 fluid ounces.

Infants' food. Generally available manufacturers' brands (store brands excluded) of baby food, strained or vegetable mixture, glass jar or can of 4 1/2 ounces.

Beans. Generally available manufacturers' brands (store brands excluded) of cooked beans with pork and tomato sauce, 14 fluid ounces.

Soup. Generally available manufacturers' brands (store brands excluded) of vegetable soup, approximately 10 ounces.

Tomato juice. Generally available manufacturers' brands (store brands excluded), juice of fresh tomatoes, may contain salt, sugar or dextrose, fancy grade, 48 ounces.

#### Fruits - fin

Pamplemousses. Des États-Unis, à chair blanche, grosseur 48; autrement, grosseur 40 ou 56, bonne qualité, prix à la livre.

Bananes. Première qualité, vendues à la livre.

Jus de pommes. Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré, naturel, peut être additionné de vitamines, catégorie de choix, n'ayant pas été dilué, boîte de 48 onces liquides.

## Légumes

Pommes de terre. Pommes de terre de table, à chair blanche, catégorie Canada nº 1, sac de 10 livres.

Oignons. Oignons à cuire, ordinaires, blancs, jaunes ou rouges, secs, bonne qualité, en paquet de matière plastique ou de cellophane (paquet jusqu'à 3 livres), vendus à la livre.

Carottes. Queues complètement enlevées, bonne qualité, paquet de matière plastique ou de cellophane (paquet jusqu'à 3 livres), vendues à la livre.

Choux. Frais, variété canadienne ou importée, choux vert, bonne qualité, prix à la livre d'un chou de grosseur moyenne.

Céleri. Pieds de céleri, verts, frais, peuvent être taillés, prix à la livre.

Laitue. Fraîche, verte, bonne qualité, taille moyenne, prix à la livre.

Tomates, en conserve. Marques des fabricants largement distribuées (sauf les marques des magasins), de tomates en conserve de plein champ, catégorie de choix, boîte de 28 onces liquides.

Nourriture pour bébés. Marques des fabricants largement distribuées (sauf les marques des magasins), de nourriture pour bébés, égouttée ou en purées, pots de verre ou boîte de 4 1/2 onces.

Fèves au lard. Marques des fabricants largement distribuées (sauf les marques des magasins), de fèves au lard cuites avec du porc et de la sauce tomate, boîte de 14 onces liquides.

Soupe. Marques des fabricants largement distribuées (sauf les marques des magasins) de soupe aux légumes, boîte d'environ 10 onces.

Jus de tomates. Marques des fabricants largement distribuées (sauf les marques des magasins) de jus de tomates fraîches; peut contenir du sel, du sucre ou du dextrose, catégorie de fantaisie, 48 onces.

# Beverages

Tea bags. Generally available manufacturers' brands (store brands excluded), orange pekoe tea bags, package of 60 two-cup paper bags (8 ounces).

Coffee, roasted. Generally available manufacturers' brands (store brands excluded), roasted whole beans, regular or all purpose ground coffee, good quality, 1 pound paper bag.

Coffee, instant. Generally available manufacturers' brands (store brands excluded), dried coffee, extract, soluble, pure or may have added dextrin, dextrose or maltose, 6 ounces.

**Soft drinks**. Generally available manufacturers' brands (store brands excluded), cola flavour. Returnable bottle type, excluding deposits. One bottle of 750 ml.

#### Miscellaneous Groceries

Jelly powder. Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 3 ounces.

# **Supplies and Personal Care Items**

Synthetic detergent powder. Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 3 litres.

Scouring powder. Generally available manufacturers' brands (store brands excluded), cleansing powder or cleanser with bleaching agent, 14 ounces.

Toilet paper. Generally available manufacturers' brands (store brands excluded) of white or pastel shades, medium quality, perforated, single sheet tissue. Multiple units of 2, about 600 to 650 sheets in roll, approx. 4" x 5", wrapped in poly. Price per roll.

Toilet soap. Generally available manufacturers' brands (store brands excluded). Selection confined to wrapped and popular brands sold in multiple units of three or four bars per package. Guest or bath sizes, as well as varieties with high synthetic or perfume content, excluded. Price per bar.

Toothpaste. Generally available manufacturers' brands (store brands excluded), standard dentifrice, may have fluoride, 50 ml.

#### Boissons

Thé en sachets. Marques des fabricants largement distribuées (sauf les marques des magasins), thé en sachets "orange Pekoe" paquet de 60 sachets de papier pour deux tasses chacun (8 onces).

Café torréfié. Marques des fabricants largement distribuées (sauf les marques des magasins), torréfié, en grains entiers, ordinaire ou moulu "tout usage", bonne qualité, sacs en papier de 1 livre.

Café instantané. Marques des fabricants largement distribuées (sauf les marques des magasins), séché, extrait, soluble, pur ou peut être additionné de dextrine, de dextrose ou de maltose, pot de 6 onces.

Boissons gazeuses. Marques des fabricants largement distribuées (sauf les marques des magasins), saveur de cola. Bouteille consignée, prix de la bouteille non compris. Une bouteille de 750 ml.

# Articles divers d'épicerie

Poudre à gelée. Marques des fabricants largement distribuées (sauf les marques des magasins), de poudre à gelée pour dessert à saveur, paquet de 3 onces.

## Fournitures et articles de soins personnels

Détersif synthétique en poudre. Marques des fabricants largement distribuées (sauf les marques des magasins), tout usage, cristallisé ou en poudre, boîte de 3 litres.

Poudre à récurer. Marques des fabricants largement distribuées (sauf les marques des magasins), poudre à récurer avec agent de blanchiment, contenant de 14 onces.

Papier hygiénique. Marques des fabricants largement distribuées (sauf les marques des magasins), blanc ou de couleur pastel, qualité moyenne, perforé, une seule épaisseur. Paquets de 2, d'environ 600 à 650 feuilles par rouleau, 4" x 5", enveloppés dans du polyéthylène. Prix par rouleau.

Savon de toilette. Marques des fabricants largement distribuées (sauf les marques des magasins). Choix limité aux marques emballées et populaires vendues en groupe de trois ou quatre pains par paquet. Les savons de taille pour invité ou de bain de même que les variétés à contenu synthétique ou de parfum, sont exclus. Prix à l'unité.

Pâte dentifrice. Marques des fabricants largement distribuées (sauf les marques des magasins), pâte dentifrice ordinaire peut contenir du fluorure, tube de 50 ml.

# Supplies and Personal Care Items — Concluded

Cleansing tissues. Generally available manufacturers' brands (store brands excluded), package of 200 double tissues, approximately 8" to 8 1/2" x 9 1/2" size.

## Tobacco

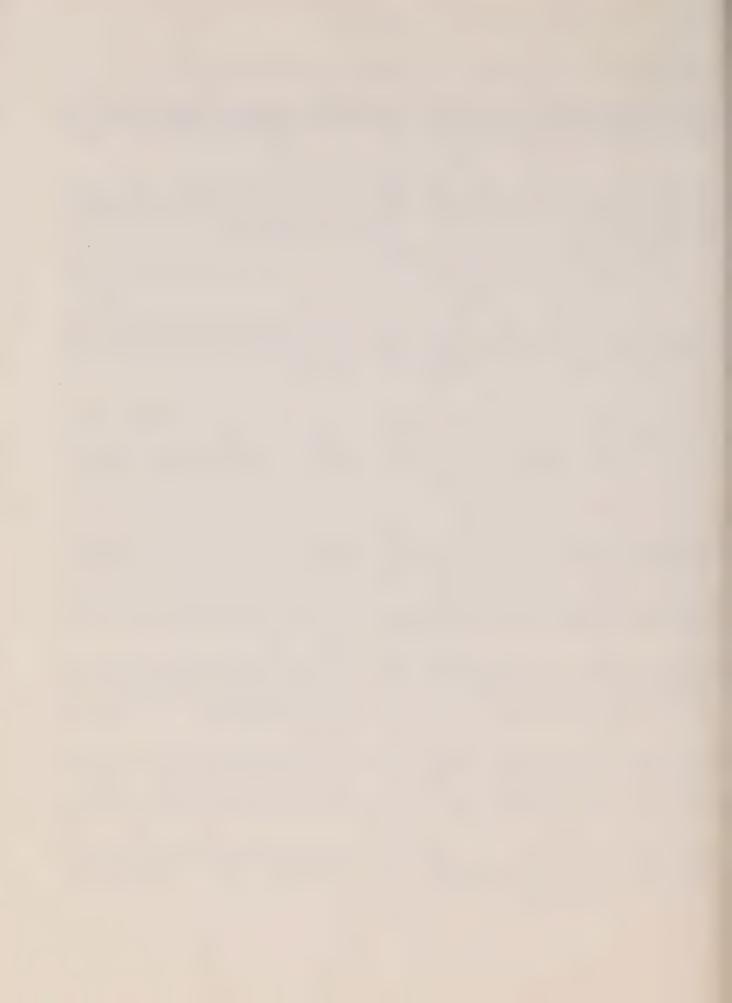

Cigarettes. Generally available popular brands, king size, filter tip, carton of 200.

## Fournitures et articles de soins personnels - fin

Papier-mouchoir. Marques des fabricants largement distribuées (sauf les marques des magasins), paquet de 200 mouchoirs double-épaisseur, taille approximative de 8" à 8 1/2" x 9 1/2".

#### Tabacs

Cigarettes. Marques populaires couramment disponibles, grand format, bout filtre, carton de 200.

# Appendix 5

# CANADIAN INTER-CITY RETAIL PRICE COMPARISONS

Table 12 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of commodities and services at the specified point in time.

The data base of this place-to-place study of comparative retail prices was largely drawn from the large volume of price quotations collected for the production of the monthly city consumer price indexes. For the inter-city food price differentials, however, use was also made of data gathered in a special program of pricing undertaken annually for publication of City Average Retail Prices.<sup>1</sup>

In developing these spatial price relationships, efforts were made to achieve comparability by seeking to equate qualities of goods and services in the various locations and by matching types of retail outlets so far as possible. To optimize price comparability between locations, differential price measurements were initially derived separately as between the following pairs of cities:

St. John's - Halifax Charlottetown - Halifax Saint John - Halifax - Halifax Ottawa Toronto - Montréal Toronto Ottawa - Winnipeg Toronto - Winnipeg Regina Edmonton - Winnipeg Edmonton - Vancouver

Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names whenever possible and also with some regard for comparability of retail outlets and merchandising practises. By means of a linking procedure, the paired city item indexes were initially compared with their counterparts in a common base city; subsequently they were related to the weighted average of the combined 11 cities equalling 100. The city-to-city price relationships for individual items thus derived were than aggregated by

# Appendice 5

# COMPARAISONS ENTRE LES PRIX DE DÉTAIL DANS DIFFÉRENTES VILLES DU CANADA

Le tableau 12 présente les différences de prix à la consommation de 11 villes du Canada, situées dans les 10 provinces, pour un nombre choisi de biens et de services, pour la période de temps spécifiée.

Les données de cette étude comparative de prix de détail proviennent en grande partie du relevé de prix utilisé pour la production de l'indice mensuel des prix à la consommation. On a, toutefois, utilisé les données obtenues dans le cadre d'un programme annuel spécial de relevé des prix servant à la publication des prix de détail moyens par ville¹ pour déterminer les différences de prix de la nourriture entre les villes.

Des efforts ont été entrepris pour développer des comparaisons valables en cherchant à obtenir des qualités identiques de biens et de services dans les différents endroits et en couplant, lorsque possible, des points de vente au détail comparables, pour déterminer les relations de prix spatiales. Afin d'optimiser la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour les paires de villes suivantes:

St. John's - Halifax Charlottetown - Halifax Saint John Halifax - Halifax Ottawa - Montréal Toronto - Toronto Ottawa - Winnipeg Toronto - Winnipeg Regina Edmonton - Winnipeg - Vancouver Edmonton

À l'intérieur de chaque paire de villes, les prix ont été couplés au niveau de l'article en s'assurant que les spécifications étaient identiques, y compris les marques, lorsque c'était possible et aussi en tenant compte de la comparaison des points de vente au détail et des méthodes de vente. Grâce à la procédure de couplage, les indices couplés des villes ont d'abord été comparés au niveau de l'article et transformés sur la base d'une ville commune, ils ont ensuite été reliés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Les relations entre les prix d'articles entre les villes ainsi déduites ont été regroupées en applicant le schéma de

<sup>1</sup> See Table 10 and Appendix 4.

<sup>1</sup> Voir tableau 10 et appendice 4.

application of the combined 11-city CPI weighting patterns updated for price change to the time of the intercity retail price comparison study. Measurements of inter-city retail price differentials are updated, as required, by application of the relative movement of item prices in each city, obtained from the relevant city CPI.

It should be noted, especially in periods of volatile price movement, that city-to-city retail price relationships may be significantly affected by the timing and the relative rate of price change occurring in each location. Furthermore, since the retail prices used in this study are those faced by consumers, they include sales and excise taxes as applicable. Thus, comparative rates of provincial sales tax in effect in the various cities at the time of price comparison, as well as changes in the rate of incidence of such taxes, can be of importance in explaining inter-city price differentials for tax-affected items or groups of items.

pondération de l'IPC des 11 villes combinées, mis à jour par la variation de prix qui s'est effectuée jusqu'au moment de l'étude comparative des prix de détail entre les villes. Les mesures de comparaison des prix de détail entre villes sont mises à jour, lorsque nécessaire, en utilisant le mouvement des prix obtenu des IPC de chaque ville, au niveau de l'article.

Il convient de noter, surtout dans une période de fluctuation des prix, que les relations entre les prix de détail d'une ville à l'autre peuvent varier de façon significative selon la période de relevé des prix et le taux relatif de variation des prix à chaque endroit. De plus, puisque les prix de détail utilisés pour cette étude sont ceux que les consommateurs doivent payer, les taxes de vente et d'accise y sont incluses. Donc, les taux comparatifs des taxes de vente provinciale effectives dans les diverses villes au temps de la comparaison, de même que le changement dans le taux ou l'incidence de ces taxes, peuvent être importantes pour expliquer les différences de prix entre les villes des articles ou groupes d'articles taxables.

# Appendix 6

# INTERNATIONAL RETAIL PRICE COM-PARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada. will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless. organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price level are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these items by means of benefits separate from those regu-

# Appendice 6

# COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créé. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10 % au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5 % à 12.4 % supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas prix au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par

lated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial interprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price

des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la revision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé

relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisions. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada.

de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au points en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer jusqu'au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada.

| Principal commodity group  | Number of<br>items priced<br>(if available)                   | Groupe principal de produits   | Nombre<br>d'articles<br>dont le prix<br>est relevé<br>(lorsque<br>disponibles) |
